

Document Title	Specification of Diagnostic Event Manager
Document Owner	AUTOSAR
Document Responsibility	AUTOSAR
Document Identification No	19

Document Status	published
Part of AUTOSAR Standard	Classic Platform
Part of Standard Release	R20-11

Document Change History			
Date	Release	Changed by	Description
2020-11-30	R20-11	AUTOSAR Release Management	<ul style="list-style-type: none"> Referenced DemEventFailureCycle-CounterThreshold removed Remove Dem_J1939DcmClearDTC from SWS_Dem_01101 Add Dem_GetDTCSelectionResult-ForClearDTC to the list of API's in SWS_Dem_01253 Minor corrections / clarifications / editorial changes
2019-11-28	R19-11	AUTOSAR Release Management	<ul style="list-style-type: none"> Diagnostic SRS renamed from SRS_DIAG_xxxx to RS_DIAG_xxxx DataType of size parameter increased for FF and ED APIs Inconsistencies and contradictions within the AR4.3.1 specifications of Dem and Dcm has been removed Minor corrections / clarifications / editorial changes , For details please refer to the Change Documentation Changed Document Status from Final to published

2018-10-31	4.4.0	AUTOSAR Release Management	<ul style="list-style-type: none">• Clarified asynchronous API behavior• IUMPR denominators are locked at operation cycle start• Support of typed C/S interfaces• minor corrections / clarifications / editorial changes; For details please refer to the ChangeDocumentation
2017-12-08	4.3.1	AUTOSAR Release Management	<ul style="list-style-type: none">• Update and optimized interaction between Dcm and Dem• Made many functions asynchronous• Shifted constraint handling to explicit requirements instead of informative text in ECUC tables• minor corrections / clarifications / editorial changes; For details please refer to the ChangeDocumentation
2016-11-30	4.3.0	AUTOSAR Release Management	<ul style="list-style-type: none">• Removal of context workarounds and reworked callback behaviour. Introduced monitor status and updated point in time of callback processing.• Introduced client concept for multiple access to the Dem. Optimized APIs for better runtime performance and aligned return values to allow the Dcm mapping to return values according to ISO 14229-1 [1].• Supporting event memories for multiple diagnostic servers• Clarified thresholds and operation cycle handling• minor corrections / clarifications / editorial changes; For details please refer to the ChangeDocumentation

2015-07-31	4.2.2	AUTOSAR Release Management	<ul style="list-style-type: none">• New APIs Dem_GetEventFreezeFrameDataEx and Dem_GetEventExtendedDataRecordEx with buffersize as parameter and corrected return value definitions.• Providing OBD FreezFrame for UDS service 0x19 0x05• ISO 14229-1:2013[2] NRC handling for service 0x14• Refined service interfaces for DataElements• minor corrections / clarifications / editorial changes; For details please refer to the ChangeDocumentation
2014-10-31	4.2.1	AUTOSAR Release Management	<ul style="list-style-type: none">• Support of ISO 27145 (WWH-OBD / Euro VI)[3]• Update to support ISO 14229-1:2013[1]• Introduction of event dependencies• Refined DTC/Event suppression
2014-03-31	4.1.3	AUTOSAR Release Management	<ul style="list-style-type: none">• Further clarification of event combination• Clarification of DTC groups• Editorial changes
2013-10-31	4.1.2	AUTOSAR Release Management	<ul style="list-style-type: none">• Added API table for service interfaces• Clarification of event combination• Editorial changes• Removed chapter(s) on change documentation

2013-03-15	4.1.1	AUTOSAR Administration	<ul style="list-style-type: none">• Incorporated new and reporting of several Dem internal data elements• Supported J1939• Supported OBD• Reworked Dem/Dcm interface• Introduced new debouncing behaviour and debounce counter storage• Extended clear DTC functionality• Supported event suppression• Extended DTC storage behavior• Incorporation of user-controlled warning indicator requestet bit• Incorporation of autostart behaviour for operation cycles
2011-12-22	4.0.3	AUTOSAR Administration	<ul style="list-style-type: none">• Introduced multiple formats per DTC• Reworked Dem_ResetEventStatus behavior• Reworked Dlt interaction• Reworked Dem/Dcm interface• Corrected include-structure and RTE interfaces• Refined several aspects on features
2009-12-18	4.0.1	AUTOSAR Administration	<ul style="list-style-type: none">• Reworked Dem/Dcm interface• Extended definition of "Diagnostic Monitor"• Introduced "Event significance" and "DTC suppression"• Reworked OBD (esp. interface for service \$02, readiness, and permanent memory)• Reworked file-structure• Finalization of issues on Revision 1

2009-12-04	3.1.4	AUTOSAR Administration	<ul style="list-style-type: none">• Improved and extended of Dem functional description (especially: status bit handling, event displacement, debouncing, fault confirmation and indicator handling, event combination, enable- & storage conditions, event related data, operation cycle management)• Introduced the approach for functional diagnostics of SW-Cs• Added Dlt interaction and debugging interface• Document structure reworked and extended• Legal disclaimer revised
2008-08-13	3.1.1	AUTOSAR Administration	<ul style="list-style-type: none">• Document structure reworked and extended• Add APIs and configuration parameters for OBD support• Improve interaction between DCM and software components• Legal disclaimer revised
2007-12-21	3.0.1	AUTOSAR Administration	<ul style="list-style-type: none">• Improvement of RTE compliance• Improvement of configuration part• Improvement of document structure• Rework and tightening of data type usage• New API added• Document meta information extended• Small layout adaptations made
2007-01-24	2.1.115	AUTOSAR Administration	<ul style="list-style-type: none">• “Advice for users” revised• “Revision Information” added

2006-11-28	2.1	AUTOSAR Administration	<ul style="list-style-type: none">• Complete rework and extension of debouncing part• Dem_ClearGroupOfDTC and Dem_ClearSingleDTC replaced by Dem_SingleDTC• Dem_GetNextFilteredDTCAndFDC, Dem_SetDTCFilterForRecords, Dem.GetSizeOfFreezeFrame, Dem_SetValueByOemId, Dem_SetEnableCondition, Xxx_DemGetFaultDetectionCounter added• DTCTranslationType replaced by DTCKind in several APIs• Chapter "Service DEM" added• Function IDs reworked• File Structure reworked and extended• Configuration chapter reworked and extended• Dem_GetNextFilteredDTC reworked• Legal disclaimer revised
2006-05-16	2.0	AUTOSAR Administration	<ul style="list-style-type: none">• Layout Adaptations

7.4.1	DTC kind	56
7.4.2	DTC format	56
7.4.3	DTC groups	58
7.4.4	DTC severity	59
7.4.5	Functional unit	59
7.4.6	DTC significance	59
7.4.7	Suppress DTC output	60
7.4.8	Availability of events (visibility and computation)	62
7.5	Monitored Component Definition	65
7.5.1	Definition of components and dependencies	66
7.6	Operation cycle management	67

7.6.1	Operation Cycle Counters	69
7.6.1.1	Cycles since last failed	69
7.6.1.2	Cycles since first failed	70
7.6.1.3	Failed cycles	71
7.7	Event memory description	71
7.7.1	Event status management	73
7.7.1.1	Status bit support	77
7.7.1.2	Monitor status and UDS status update	77
7.7.1.3	Status bit transitions	80
7.7.1.4	Active/Passive status	83
7.7.1.5	Notification of status bit changes	84
7.7.2	Event memory management	85
7.7.2.1	Event retention	87
7.7.2.2	Clearing event memory entries	89
7.7.2.3	Event memory overflow indication	93
7.7.2.4	Event displacement	93
7.7.2.5	Reporting order of event memory entries	96
7.7.3	Debouncing of diagnostic events	97
7.7.3.1	Counter based debounce algorithm	98
7.7.3.2	Time based debounce algorithm	102
7.7.3.3	Monitor internal debounce algorithm	107
7.7.3.4	Debounce algorithm initialization and reset conditions	107
7.7.3.5	Fault detection counter retrieval	108
7.7.3.6	Fault detection counter reporting	109
7.7.4	Fault confirmation	109
7.7.4.1	Method for grouping of association of events for OBD purpose	111
7.7.5	Event Combination	111
7.7.5.1	Combination On Storage	113
7.7.5.2	Combination On Retrieval	114
7.7.6	Enable and storage conditions of diagnostic events	114
7.7.7	Event related data	118
7.7.7.1	Storage of freeze frame data	119
7.7.7.2	Pre-storage of freeze frame data	124
7.7.7.3	Storage of extended data	126
7.7.7.4	Configuration of Event related data	128
7.7.7.5	Notification of data changes	135
7.7.8	Aging of diagnostic events	136
7.7.9	Healing of diagnostic events	140
7.7.9.1	Warning indicator handling	140
7.7.9.2	User controlled WarningIndicatorRequested-bit	142
7.7.9.3	Handling of the warning indicator lamp (MIL)	144
7.7.9.4	Notification and Set of the warning indicator status	144
7.8	BSW Error Handling	144
7.9	OBD-specific functionality	146
7.9.1	General overview and restrictions	146

7.9.2	PIDs provided by Dem	149
7.9.2.1	Centralized PID \$21 / \$31 / \$4D / \$4E handling	150
7.9.3	Readiness status	152
7.9.4	In-Use-Monitor Performance Ratio (IUMPR) Support	153
7.9.5	OBD for light duty (OBD2)	158
7.9.5.1	Service \$01 Read Current Powertrain Diagnostic Data	158
7.9.5.2	Service \$02 Read Powertrain Freeze Frame Data	159
7.9.5.3	Service \$03 - Read Emission-Related Powertrain Diagnostic Trouble Codes	160
7.9.5.4	Service \$04 - Clear Reset Emission-Related Diagnostic Information	160
7.9.5.5	Service \$06 - Support of central DTR handling	161
7.9.5.6	Service \$07 - Read emission-related diagnostic trouble codes detected during current or last completed driving cycle	165
7.9.5.7	Service \$0A - Read Emission-Related Diagnostic Trouble Codes with Permanent Status	165
7.9.5.8	MIL Handling	166
7.9.6	WWH-OBD	166
7.9.6.1	DTC WWHOBD class	166
7.9.6.2	Continuous-MI counter	167
7.9.6.3	Cumulative Continuous-MI counter (Master ECU)	167
7.9.6.4	Class B1 counter	168
7.9.6.5	Activation Mode	168
7.9.6.6	Freeze Frame 0x00	169
7.9.6.7	Extended Data Record 0x90	170
7.9.6.8	Aging	170
7.9.6.9	Service \$19 42 - Read WWH-OBD DTC By Mask Record	170
7.9.6.10	Service \$14 FFFF33 - Clear Emission Related DTCs	171
7.10	J1939 specific functionality	171
7.10.1	Read DTC	171
7.10.1.1	Composite Malfunction Indicator Lamp Status	172
7.10.1.2	Composite Red Stop Lamp Status	173
7.10.1.3	Composite Amber Warning Lamp Status	173
7.10.1.4	Composite Protect Lamp Status	174
7.10.1.5	DTC data acquisition	174
7.10.2	Clear DTCs	175
7.10.3	DM31	175
7.10.3.1	Malfunction Indicator Lamp	176
7.10.3.2	Red Stop Lamp	176
7.10.3.3	Amber Warning Lamp	177
7.10.3.4	Protect Lamp	177
7.10.3.5	J1939 lamp status	178
7.10.4	FreezeFrame	178
7.10.4.1	SPNs in ExpandedFreezeFrame	179

7.10.5	Diagnostic Readiness	180
7.10.6	Monitor Performance Ratio	182
7.11	Interaction with other Software Modules	182
7.11.1	Interaction with Software Components (SW-C)	182
7.11.2	Interaction with Diagnostic Clients	184
7.11.2.1	Parallel event memory access	184
7.11.2.2	Accessing diagnostic fault memory	185
7.11.2.3	Access DTCs and Status Information	187
7.11.2.4	Access event related data	192
7.11.2.5	Clear diagnostic information	196
7.11.2.6	Control DTC setting	196
7.11.2.7	Asynchronous Dcm operations	197
7.11.3	Interaction with J1939 Diagnostic Manager (J1939)	197
7.11.4	Interaction with Function Inhibition Manager (FIM)	197
7.11.5	Interaction with NVRAM Manager (NvM)	198
7.11.6	Interaction with Default Error Tracer (Det)	199
7.11.7	Required data by the Dem module	199
7.11.8	Scaling information on Service Interfaces	200
7.12	Version check	202
7.13	Error classification	202
7.13.1	Development Errors	203
7.13.2	Runtime Errors	204
7.13.3	Transient Faults	204
7.13.4	Production Errors	204
7.13.5	Extended Production Errors	205
8	API specification	206

1 Introduction and functional overview

The service component Diagnostic Event Manager (Dem) is responsible for processing and storing diagnostic events (errors) and associated data. Further, the Dem provides fault information to the Dcm (e.g. read all stored DTCs from the [event memory](#)). The Dem offers interfaces to the application layer and to other BSW modules.

The basic target of the Dem specification document is to define the ability for a common approach of a "diagnostic fault memory" for automotive manufacturers and component suppliers

This specification defines the functionality, API and the configuration of the AUTOSAR basic software module Diagnostic Event Manager (Dem). Parts of the internal behavior are manufacturer specific and described in the Limitations chapter.

2 Acronyms and Abbreviations

The glossary below includes acronyms and abbreviations relevant to the Dem module that are not included in the [4, AUTOSAR glossary].

2.1 Acronyms

Acronym	Description
Activation Mode 1	Absence of malfunction - The MIL shall blink for one flash.
Activation Mode 2	"on-demand-MI" - The MIL shall show blink for two flashes if the OBD system would command an on-demand-MI according to the discriminatory display strategy.
Activation Mode 3	"short-MI" - The MIL shall blink for three flashes if the OBD system would command a short-MI according to the discriminatory display strategy.
Activation Mode 4	"continuous-MI" - The MIL shall remain continuously ON ("continuous-MI") if the OBD system would command a continuous-MI according to the discriminatory display strategy.
Aging	Unlearning/deleting of a no longer failed event/DTC after a defined number of operation cycles from event memory .
Aging Counter	The "Aging Counter" or "Aging Cycle Counter" or "DTC Aging Counter" specifies the counter which is used to perform Aging. It counts the number of operation cycles until an event/DTC is removed from event memory .
Class B1 counter	Number of engine hours during which a Class B1 malfunction has been Confirmed and TestFailed.
Combined DTC	Normal DTC, but referenced by multiple events reported by several monitors (e.g. ECU Defect, consisting of different HW defects).
Continuous-MI counter	Hours run by the engine while a continuous MI is commanded.
Cumulative Continuous-MI counter	Number of engine hours during which MI has been continuously commanded to be on during its lifetime.
Debounce counter	Internal counter for counter-based debouncing algorithm(s).
DemComponent / Monitored Component	A monitored component is a part of the system, which is checked for proper operation by one or several monitorings. (see chapter 7.5)
Dem-internal data value	Some data values (e.g. the occurrence counter) are calculated by the Dem module itself internally.
Denominator	The denominator of a specific monitor m (Denominator _m) is a counter indicating the number of vehicle driving events, taking into account conditions specific to that specific monitor.
Dependent / Secondary ECUs	Dependent / Secondary (or dep. / sec.) ECUs are always related to a Master or a Primary ECU.
Directed acyclic graph	Dependency graph without circular dependencies.
Displacement	Replacing the the most insignificant event memory entry by a more significant event memory entry which needs to be stored.

Acronym	Description
DTC group	Uniquely identifies an set of DTCs . A DTC group is mapped into the range of valid DTCs. By providing a group of DTCs it is expressed that a certain operation is requested on all DTCs of that group. The DTC group definition is provided by ISO 14229-1[2] and OEM/supplier specific.
DtcGroupAllDtcs	Grouping of all configured DTCS (representation is 0xFFFFFFF).
Event combination	Event combination is a method to merge several events to one specific combined DTC. It is used to adapt different monitor results to one significant fault, which is clearly evaluable in a service station.
Event debouncing	Debouncing is a specific mechanism (e.g. counter-based) to evaluate, if the diagnostic event gets qualified. This works on top of potential signal debouncing and can be done within the SW-C or inside the Dem.
Event confirmation	A diagnostic event is confirmed in case of repeated detection of qualified events over cycles or time evaluated by means of fault confirmation counters. Therefore, also the UDS status bit 3 (ConfirmedDTC) is set.
Event memory	An event memory (e.g. Primary memory) consists of several event memory entries.
Event memory entry	The event memory entry is a single storage container for an event and its event related data. The event memory entry is dynamically assigned to specific events.
Event memory overflow indication	The event memory overflow indication indicates, if this specific event memory is full and the next event occurs to be stored in this event memory .
Event qualification	A diagnostic event is qualified in case of a passed or a failed result is set (Dem-internal or reported from another BSW module or SW-C).
Event related data	Event related data is additional data, e.g. sensor values or time stamp/mileage, which is stored with an event in an event memory . ISO defines two types of event related data: freeze frames (snapshot records) and extended data.
Event status byte	Status byte as defined in ISO 14229-1 [1], based on event level.
Extended data record	An extended data record is a record to store specific information assigned to a fault.
Failure counter	The Failure counter represents the Trip Counter according to ISO14229-1 [2]. The Trip Counter counts the number of operation cycles (driving cycles) where a malfunction occurred. If the counter reaches the threshold (e.g., 2 driving cycles) the confirmed bit changes from 0 to 1.
Fault Detection Counter	sint8 value as used in ISO and FDC-APIs.
Freeze frame	Freeze frame is defined as a record of data (DIDs/PIDs). Freeze frames are the same as SnapShotRecords in ISO-14229-1[2].
General Denominator	The general denominator is a counter indicating the number of times a vehicle has been operated, taking into account general conditions.
Healing	Switching off the warning indicator including the handling of reported passed results over a period of time / several operation cycles
In-Use performance ratio	The in-use performance ratio (IUPR) of a specific monitor m of the OBD system is: IUPR _m = Numerator _m / Denominator _m

Acronym	Description
Master ECU	As a primary ECU a Master ECU stores "it's own" and "reported errors" of related dep. / sec ECUs in its event memory . Beside this a Master has to fulfill special Master tasks as MIL Master or provision of "general nominator" information.
Monitor	A diagnostic monitor is a routine entity determining the proper functionality of a component. Alternatively the term "diagnostic function" can be used.
Numerator	The numerator of a specific monitor m (Numeratorm) is a counter indicating the number of times a vehicle has been operated such that all monitoring conditions necessary for that specific monitor to detect a malfunction have been encountered.
NvM is marked for NvM_WriteAll	The Dem has called NvM_SetRamBlockStatus() to set the according NvM Block to be written by NvM_WriteAll()
Operating cycle	An 'operation cycle' is the base of the event qualifying and also Dem scheduling (e.g. ignition key off-on cycles, driving cycles, etc.)
OBD	On-Board Diagnostics, or OBD is a generic term referring to a vehicle's self-diagnostic and reporting capability. OBD systems give the vehicle owner or a repair technician access to state of health information for various vehicle sub-systems.
OBD ECUs	<p>"In a vehicle there can be 3 different types of OBD ECUs:</p> <ul style="list-style-type: none"> • Master ECU (one per vehicle) • Primary ECUs (several per vehicle) • Dependent / Secondary ECUs (several per vehicle)
P-Code	Power train code
PFC cycle	Permanent fault code - driving cycle (OBD Term)
Positive Callback from NvM	The Dem module shall use the APIs NvM_WriteBlock and NvM_GetErrorStatus of the NVRAMManager [5], if there is the necessity to store data between Dem_Init and Dem_Shutdown . Furthermore the API NvM_GetErrorStatus shall wait for positive response if writing of block completed successfully.
PossibleErrors	PossibleErrors means the ApplicationErrors as defined in meta model
Primary ECU	A primary ECU stores "it's own" and "reported errors" of related dep. / sec ECUs in its event memory
RBM cycle	OBD Term: General Nominator / Rate-based monitoring - driving cycle (OBD Term)
Readiness	The readiness refers to the tested bits TestNotCompletedSinceLastClear (bit 4) and TestNotCompleteThisOperationCycle (bit 6) of the UDS status byte.
Triggered to NvM	The Dem module shall use the API NvM_WriteBlock of the NVRAMManager [5], if there is the necessity to trigger the storage of data between Dem_Init and Dem_Shutdown . Furthermore the Dem module shall wait for positive response of NvM_WriteBlock if request has been accepted.
UDS status bit 0	testFailed bit of the UDS status byte. Indicates the result of the most recently performed test.
UDS status bit 1	testFailedThisOperationCycle bit of the UDS status byte. Indicates whether or not a diagnostic test has reported a testFailed result at any time during the current operation cycle.

Acronym	Description
UDS status bit 2	pendingDTC bit of the UDS status byte. Indicates whether or not a diagnostic test has reported a testFailed result at any time during the current or last completed operation cycle.
UDS status bit 3	confirmedDTC bit of the UDS status byte. Indicates whether a malfunction was detected enough times to warrant that the DTC is desired to be stored in long-term memory.
UDS status bit 4	testNotCompletedSinceLastClear bit of the UDS status byte. Indicates whether a DTC test has ever run and completed since the last time a call was made to ClearDiagnosticInformation.
UDS status bit 5	testFailedSinceLastClear bit of the UDS status byte. Indicates whether a DTC test has completed with a failed result since the last time a call was made to ClearDiagnosticInformation.
UDS status bit 6	testNotCompletedThisOperationCycle bit of the UDS status byte. Indicates whether a DTC test has ever run and completed during the current operation cycle.
UDS status bit 7	warningIndicatorRequested bit of the UDS status byte. Report the status of any warning indicators associated with a particular DTC.
UDS status byte	Status byte as defined in ISO 14229-1 [1], based on DTC level.

2.2 Abbreviations

Abbreviation	Description
API	Application Programming Interface
BSW	Basic Software
CDD	Complex Device Driver
CRC	Cyclic Redundancy Check
Dcm	Diagnostic Communication Manager
Dem	Diagnostic Event Manager
Det	Default Error Tracer
DID	Data Identifier
DTC	Diagnostic Trouble Code
DTR	Diagnostic Test Result
DYC	OBD Term: Driving Cycle (OBD Term)
ECU	Electronic Control Unit
EcuM	Electronic Control Unit Manager
FDC	Fault Detection Counter
Fim	Function Inhibition Manager
FMI	Failure Mode Indicator (SAE J1939)
FTB	Failure Type Byte
HW	Hardware
ID	Identification/Identifier
ISO	International Standardization Organization
IUMPR	In Use Monitoring Performance Ratio (OBD Term)
J1939Dcm	SAEJ1939 Diagnostic Communication Manager
MIL	Malfunction Indicator Light (SAE J1979) or Lamp (SAE J1939)
NVRAM	Non volatile RAM
OBD	On-Board-Diagnostics

Abbreviation	Description
OC	Occurrence Count (SAE J1939)
OEM	Original Equipment Manufacturer (Automotive Manufacturer)
OS	Operating System
PID	Parameter Identification (SAE J1587 or SAE J1979)
PTO	Power Take Off
RAM	Random Access Memory
ROM	Read-only Memory
RTE	Runtime Environment
SPN	Suspect Parameter Number (SAE J1939)
SSCP	synchronous server call point
SW	Software
SW-C	Software Component
UDS	Unified Diagnostic Services
VOBD	Vehicle On-Board-Diagnostic
WUC	OBD Term: Warm up cycle (OBD Term)
WIR	Warning Indicator Request
WWH-OBD	World Wide Harmonized On-Board-Diagnostic

3.2 Related specification

AUTOSAR provides a General Specification on Basic Software modules [6, SWS BSW General], which is also valid for Diagnostic Event Manager.

Thus, the specification SWS BSW General shall be considered as additional and required specification for Diagnostic Event Manager.

4 Constraints and assumptions

Some of the synchronous API calls defined within the Dem might take variable time to complete. Thus, this variable time must be considered in the system configuration.

[SWS_Dem_00126] [There shall only be one Dem module available per ECU.] ([RS-Diag_04002](#))

The Dem can have multiple different sections of [event memory](#). The mapping of a DTC to the respective section is done with the parameter DTC Origin. A specific ECU's Dem is only accessible by software components located inside the same ECU.

4.1 Limitations

Timing constraints have to be considered for the whole ECU. If there are explicit needs for faster responses from the Dem than the Dem basic cycle time, special measures have to be implemented, that are not specified in this AUTOSAR document. This is especially the case in ECUs with many events.

Callbacks for Event and DTCStatusChange are not deterministic in rare cases, wherefore it shall not be used for safety-relevant use-cases. Consider the general statement in ISO-14229-1[[2](#)] that it is not recommended to link the [DTC](#) status with failsafe strategies.

The handling of infrastructure errors reported by the RTE during Dem <=> SW-C interactions is missing from the SWS and might have to be taken into account by implementers if they need it.

The Dem is able to support additional event memories (permanent memory, mirror memory and user defined memory), but the specific [event memory](#) processing is not defined in detail.

Some details on the interaction between Dem and specific emission-related SW-C are not specified in this specification, since they are dependent on the SW-C implementation. The following functionality is not defined:

- Malfunction Indicator Lamp (MIL)-activation (MIL handler interaction to Dem, MIL-bulb check, readiness blinking, blinking in case of catalyst damaging misfire, etc.)
- misfire fault handling (debouncing over all cylinders, filtering single / multiple misfire faults)
- support of similar conditions for the specific healing of misfire and fuel system faults

Note: For OBD2, it is required that misfire and fuel system fault shall only be healed (yielding leaving Service \$07) under the similar conditions as they have been detected. The "similarity" is derived from a "window" spanned by ranges on engine speed, engine load and temperature conditions being present at the time of fault detection.

For the handling of similar conditions it is assumed that the SW-C modules of misfire detection / fuelsystem diagnostics carry out the necessary computations themselves. That is, it is not globally solved within the Dem.

However, based on specific interface requirements of the respective misfire detection / fuelsystem diagnostics this may result in an extension of the Dem. Any further implementations on that need to be defined for a particular engine control unit project depending on the diagnostics and the Dem implementation.

The DTCStoredDataRecordNumber (absolute freeze frame record addressing functionality) is limited to 0x00 (OBD freeze frame, refer to [subsubsection 7.11.2.4](#)).

The structure of a specific extended data record identified by its record number is unique per ECU.

The Dcm may lock the `event memory` update (refer to [\[SWS_Dem_00270\]](#)) while processing the “read diagnostic data” service, due to architectural design.

This specification covers a subset of SAE J1939 related diagnostic requirements (see Table 1: Supported DMx messages in [\[7, SWS J1939 Dcm\]](#)). The SPN Conversion Method is limited to Version 4 (CM = 0).

AUTOSAR only supports user defined memories with IDs from 0x10 to 0xFF as proposed to ISO 14229:1[\[2\]](#) by AUTOSAR.

Indicators are `DemEventMemorySet` local only. The Dem does not support configurations where indicators are used on more than one `DemEventMemorySet`.

4.2 Applicability to car domains

The Dem is designed to fulfill the design demands for ECUs with OBD requirements as well as for ECUs without OBD requirements. The immediate domains of applicability are currently body, chassis and powertrain ECUs. However, there is no reason why the Dem cannot be used to implement ECUs for other car domains like infotainment.

5 Dependencies to other modules

The AUTOSAR **Diagnostic Event Manager (Dem)** has interfaces and dependencies to the following Basic software modules and Software Components:

Figure 5.1: Dependencies of the Dem to other software modules

- The **Function Inhibition Manager (FiM)** (refer to [8, SWS FiM]) stands for the evaluation and assignment of events to the required actions for Software Components (e.g. inhibition of specific “Monitors”). The Dem informs and updates the Function Inhibition Manager (FiM) upon changes of the monitor status in order to stop or release function entities according to assigned dependencies.
- The **Diagnostic Communication Manager (Dcm)** (refer to [9, SWS Dcm]) is in charge of the UDS and SAE J1979 communication path and execution of diagnostic service resulting in the processing of diagnostic requests from an external tester or onboard test system. It forwards requests coming from an external diagnostic scan tool and is further responsible for assembly of response messages (DTC, status information, etc.) which will be transferred to the external diagnostic scan tool afterwards.

- The **Diagnostic Communication Manager for J1939 (J1939Dcm)** (refer to [7, SWS J1939 Dcm]) is in charge of the SAE J1939-73 diagnostics communication protocol.
- **Software-Components (SW-C) and Basic Software (BSW) modules** can access the Dem to update and/or retrieve current monitor status and UDS status information. SW-Cs and BSW modules can retrieve data from the Dem e.g. to turn the indicator lamps on or off. The monitor is a sub-component of a SW-C / BSW module.
- **Data Provider** SW-Cs and/or BSW modules will provide data (i.e. event related data) required by the Dem, for example, to be able to create `event memory` entries.
- The **NVRAM Manager (NvM)** (refer to [5]) provides mechanisms to store data blocks in NVRAM. NVRAM blocks (maximum size is a matter of configuration) are assigned to the Dem and used by the Dem to achieve permanent storage of UDS status information and associated data (e.g. over power-on reset).
- The **ECU State Manager (EcuM)** is responsible for the basic initialization and de-initialization of basic software components including Dem.
- The **RTE** implements scheduling mechanisms for BSW, e.g. assigns priority and memory protection to each BSW module used in an ECU.

5.1 File structure

5.1.1 Code file structure

For details refer to the chapter 5.1.6 “Code File Structure” in SWS_BSWGeneral [6] (sub chapters “Link time configuration source” and “Post-build time configuration source”).

5.1.2 Header file structure

The symbolic names (refer to TPS_ECUC_02108) are generated for configuration containers containing an identifier parameter, like event Id symbols, operation cycles, indicators, enable/storage conditions, etc.

Note, that also SW-C event Ids are published especially for complex device drivers, which may access on the status of specific SW-C events. SW-Cs use different ports to distinguish between different events.

5.2 Integration Hints

Due to cross-module communication it is recommended to map the [Dem](#) and J1939Dcm to the same Task to have for the [RTE](#) the correct call-context configured. There might be other [BSW](#) vendor-specific solutions possible allowing a more flexible mapping (e.g. by describing this cross-module communication in the [BSW](#) internal-behavior or by a similar mechanism with the [Dcm](#) <-> [Dem](#) interaction).

6 Requirements traceability

The following table references the requirements specified in [10] as well as [11] and links to the fulfillment of these.

Requirement	Description	Satisfied by
[Non volatile storage of pre-stored data]	No description	[SWS_Dem_01320]
[RS_Diag_04002]	The Diagnostic event (fault) management shall be established as Basic SW Module	[SWS_Dem_00126]
[RS_Diag_04005]	Manage Security Access level handling	[SWS_Dem_00999]
[RS_Diag_04006]	Manage session handling	[SWS_Dem_00999]
[RS_Diag_04007]	Provide a diagnostic service handling for the applications involved in diagnostic functionality	[SWS_Dem_00999]
[RS_Diag_04015]	Timing handling according to ISO14229-2	[SWS_Dem_00999]
[RS_Diag_04016]	Support "Busy handling" by sending a negative response 0x78	[SWS_Dem_00999]
[RS_Diag_04019]	Provide confirmation after transmit diagnostic responses to the application	[SWS_Dem_00999]
[RS_Diag_04020]	Suppress responses to diagnostic tool requests	[SWS_Dem_00999]
[RS_Diag_04021]	Handling of different diagnostic sessions in parallel	[SWS_Dem_00999]
[RS_Diag_04024]	Access and handle specific data elements and data element groups if requested by an external scan tool	[SWS_Dem_00479] [SWS_Dem_01194]
[RS_Diag_04031]	Notify the Function Inhibition Manager (FIM) upon changes of the event status in order to process them according to the SW components dependencies	[SWS_Dem_00029] [SWS_Dem_01189] [SWS_Dem_01325] [SWS_Dem_01326]
[RS_Diag_04032]	Different diagnostic addresses shall be supported by multiple (physical) channels	[SWS_Dem_00999]

Requirement	Description	Satisfied by
[RS_Diag_04033]	Support the upload/download services for reading/writing data in an ECU in an extended and manufacturer specific diagnostic session	[SWS_Dem_00999]
[RS_Diag_04057]	Classification of events for series production, OBD and expert usage	[SWS_Dem_00057] [SWS_Dem_00518] [SWS_Dem_00649] [SWS_Dem_00906] [SWS_Dem_01066]
[RS_Diag_04058]	Ability to access different event memories	[SWS_Dem_00171]
[RS_Diag_04059]	Configuration of timing parameters	[SWS_Dem_00999]
[RS_Diag_04063]	Process a dedicated event identifier for each monitoring path to support an autonomous handling of different events/faults	[SWS_Dem_00153] [SWS_Dem_00154] [SWS_Dem_00942] [SWS_Dem_01034] [SWS_Dem_01037]
[RS_Diag_04064]	Provide configurable buffer sizes for storage of the events, status information and environmental data	[SWS_Dem_00999]
[RS_Diag_04067]	Provide the diagnostic status information according to ISO 14229-1	[SWS_Dem_00006] [SWS_Dem_00011] [SWS_Dem_00016] [SWS_Dem_00051] [SWS_Dem_00059] [SWS_Dem_00060] [SWS_Dem_00187] [SWS_Dem_00212] [SWS_Dem_00213] [SWS_Dem_00330] [SWS_Dem_00385] [SWS_Dem_00386] [SWS_Dem_00387] [SWS_Dem_00388] [SWS_Dem_00389] [SWS_Dem_00390] [SWS_Dem_00391] [SWS_Dem_00392] [SWS_Dem_00393] [SWS_Dem_00394] [SWS_Dem_00395] [SWS_Dem_00409] [SWS_Dem_00421] [SWS_Dem_00431] [SWS_Dem_00523] [SWS_Dem_00524] [SWS_Dem_00525] [SWS_Dem_00529] [SWS_Dem_00539] [SWS_Dem_00566] [SWS_Dem_00638] [SWS_Dem_00823] [SWS_Dem_00936] [SWS_Dem_01186] [SWS_Dem_01276] [SWS_Dem_01277] [SWS_Dem_01278] [SWS_Dem_01280] [SWS_Dem_01281] [SWS_Dem_01282] [SWS_Dem_01283] [SWS_Dem_01284] [SWS_Dem_01285] [SWS_Dem_01286] [SWS_Dem_01287] [SWS_Dem_01342] [SWS_Dem_91008]

Requirement	Description	Satisfied by
[RS_Diag_04068]	The diagnostic in AUTOSAR shall support event specific debounce counters to improve signal quality internally (According to ISO 14229-1 Appendix D)	[SWS_Dem_00019] [SWS_Dem_00204] [SWS_Dem_00264] [SWS_Dem_00343] [SWS_Dem_00344] [SWS_Dem_00413] [SWS_Dem_00414] [SWS_Dem_00416] [SWS_Dem_00417] [SWS_Dem_00418] [SWS_Dem_00419] [SWS_Dem_00420] [SWS_Dem_00421] [SWS_Dem_00422] [SWS_Dem_00423] [SWS_Dem_00424] [SWS_Dem_00425] [SWS_Dem_00426] [SWS_Dem_00427] [SWS_Dem_00428] [SWS_Dem_00429] [SWS_Dem_00431] [SWS_Dem_00432] [SWS_Dem_00433] [SWS_Dem_00434] [SWS_Dem_00435] [SWS_Dem_00437] [SWS_Dem_00438] [SWS_Dem_00439] [SWS_Dem_00526] [SWS_Dem_00527] [SWS_Dem_00643] [SWS_Dem_00684] [SWS_Dem_00685] [SWS_Dem_00730] [SWS_Dem_00772] [SWS_Dem_00774] [SWS_Dem_00778] [SWS_Dem_00779] [SWS_Dem_00818] [SWS_Dem_00844] [SWS_Dem_00985] [SWS_Dem_01213] [SWS_Dem_01279]
[RS_Diag_04071]	Process events according to their defined importance like priority and/or severity	[SWS_Dem_00232] [SWS_Dem_00382] [SWS_Dem_00383] [SWS_Dem_00692] [SWS_Dem_01291] [SWS_Dem_01292] [SWS_Dem_01293] [SWS_Dem_01294]

7 Functional specification

The Diagnostic Event Manager (Dem) handles and stores the events detected by diagnostic monitors in both Software Components (SW-Cs) and Basic software (BSW) modules. The stored event information is available via an interface to other BSW modules or SW-Cs.

[DemGeneral](#) contains the global part of the configuration and DemConfigSet contains the multiple configuration part.

7.1 Startup behavior

[SWS_Dem_00169] [The Dem module shall distinguish between a pre-initialization mode and a full-initialized mode (operation mode).] ([SRS_BSW_00406](#))

[SWS_Dem_00180] [The function [Dem_PreInit](#) shall initialize the internal states of the Dem module necessary to process events and reset debounce counters reported by SW-C or BSW modules by using [Dem_SetEventStatus](#) and [Dem_ResetEventDebounceStatus](#).] ([SRS_BSW_00101](#))

The function [Dem_PreInit](#) is called by the ECU State Manager during the startup phase of the ECU before the NVRAM Manager is initialized. The BSW modules can start reporting of related events via [Dem_SetEventStatus](#) (refer to [\[SWS_Dem_00167\]](#)).

The function [Dem_Init](#) (refer also to [\[SWS_Dem_00340\]](#)) is called during the startup phase of the ECU, after the NVRAM Manager has finished the restore of NVRAM data. SW-Components including monitors are initialized afterwards. The function [Dem_Init](#) is also used to reinitialize the Dem module after the [Dem_Shutdown](#) was called.

Caveats of [Dem_Init](#): The Dem module is not functional until the Dem module's environment has called the function [Dem_Init](#).

7.2 Monitor re-initialization

The primary initialization of the monitors in the application is done via [Rte_Start](#). The initialization of the event-specific part of the monitor can be triggered by the Dem.

[SWS_Dem_00003] [The Dem module shall provide the interface [InitMonitorForEvent](#) to trigger the initialization of a diagnostic monitor (refer also to [\[SWS_Dem_00573\]](#)).] ([SRS_BSW_00457](#))

For details see also chapter [7.7.3](#).

The function parameter [InitMonitorReason](#) indicates the reason / trigger of initialization.

Note: The Dem module does not evaluate the return value (e.g. if other than E_OK) of this callback function.

Note: The configuration container `DemCallbackInitMForE` is used to specify the related port or c-callback per event.

[SWS_Dem_00679] [A call to `Dem_RestartOperationCycle` shall re-initialize the diagnostic monitors of all related events by calling their respective callbacks `InitMonitorForEvent` with parameter `InitMonitorReason` set to `DEM_INIT_MONITOR_RESTART`.] (*RS_Diag_04117*)

[SWS_Dem_00680] [The `Dem_ClearDTC` API shall trigger the callback function `InitMonitorForEvent` of the related event(s) in case of clearing the event(s). The `InitMonitorReason` parameter shall be set to `DEM_INIT_MONITOR_CLEAR`.] (*RS_Diag_04117*)

[SWS_Dem_00681] [The API `Dem_SetEnableCondition` shall trigger the callback function `InitMonitorForEvent` of the related event(s) in case an enable condition of the event(s) is changed to fulfilled and thus all enable conditions of the event(s) are fulfilled. The `InitMonitorReason` parameter shall be set to `DEM_INIT_MONITOR_REENABLED`.] (*RS_Diag_04125*)

[SWS_Dem_00682] [The API `Dem_EnableDTCSetting` shall trigger the callback function `InitMonitorForEvent` of the related event(s) in case ControlIDTCSetting of the event(s) is re-enabled. The `InitMonitorReason` parameter shall be set to `DEM_INIT_MONITOR_REENABLED`.] (*RS_Diag_04125*)

[SWS_Dem_01113] [The API `Dem_SetStorageCondition` shall trigger the callback function `InitMonitorForEvent` of the related event(s) in case a storage condition of the event(s) is changed to fulfilled and thus all storage conditions of the event(s) are fulfilled. Furthermore the callback shall only be called, if the event did report FAILED or PASSED while the storage condition was disabled. The `InitMonitorReason` parameter shall be set to `DEM_INIT_MONITOR_REENABLED`.] (*RS_Diag_04219*)

The following figures show two examples:

Figure 7.1: Use-case of the interface InitMonitorForEvent for a specific event

Figure 7.2: Use-case of the interface InitMonitorForEvent for a specific event

The initialization of any function (which may relate to the monitor) can also be triggered by the Dem.

Note: The Dem module does not evaluate the return value (e.g. if other than E_OK) of this callback function.

Example: Adaptations may be initialized in case of clearing the Dem module (on service 04/ISO 15031-5[12] request).

[SWS_Dem_01046] [In case multiple triggers for `InitMonitorForEvent` occur simultaneously, the `InitMforE` shall only be called once. The reason shall be selected by following priority: `DEM_INIT_MONITOR_CLEAR` (highest priority), `DEM_INIT_MONITOR_RESTART`, `DEM_INIT_MONITOR_REENABLED` (lowest priority) (refer to [Dem_InitMonitorReasonType](#)).]()

7.3 Diagnostic event definition

A ‘Diagnostic Event’ defines the atomic unit that can be handled by the Dem module. The status of a ‘Diagnostic Event’ represents the result of a monitor (refer to chapter [7.3.5](#)). The Dem receives the result of a monitor from SW-C via the RTE or other BSW modules.

The Dem module uses the EventId to manage the status of the ‘Diagnostic Event’ of a system and performs the required actions for individual test results, e.g. stores the freeze frame.

[SWS_Dem_00153] [The Dem module shall represent each Diagnostic Event by an EventId and the related EventName.]([RS_Diag_04063](#))

All monitors and BSW modules use the EventId as a symbolic EventName. The Dem configuration tool replaces the symbolic names by numbers.

[SWS_Dem_00154] [The EventId and the related EventName shall be unique per Dem module represented by the ECU configuration (refer to [\[SWS_Dem_00126\]](#)).] ([RS_Diag_04063](#))

The `Dem` is not designed to be able to handle the case where more than one monitor shares a single EventId.

The `Dem` module uses an internal monitor status to store the status of reported events. To the `Dcm` the UDS status is reported

The Dem module supports several event-specific configuration parameters as shown in the following figures. For a detailed description, refer to chapter 10 Configuration specification.

Figure 7.3: Event parameter configuration (part 1)

Figure 7.4: Event parameter configuration (part 2)

7.3.1 Event priority

Event priority is defined as a ranking of events based upon level of importance. It is used to determine which fault entries may be removed from the [event memory](#) in case the number of stored events exceeds the maximum number of memory entries (event memory is full).

[SWS_Dem_00382] [Each supported event shall have a priority assigned to it (refer to parameter [DemDTCPriority](#) in [DemDTCAttributes](#)).] ([RS_Diag_04118](#), [RS_Diag_04071](#))

[SWS_Dem_00383] [A priority value of 1 shall be the highest priority. Larger priority value shall define lower importance.] ([RS_Diag_04118](#), [RS_Diag_04071](#))

7.3.2 Event occurrence

[SWS_Dem_00011] [The Dem module shall provide an occurrence counter per [event memory entry](#).] ([RS_Diag_04067](#))

[SWS_Dem_00523] [The Dem module shall initialize the occurrence counter with the value one if the related event is entered in the respective [event memory](#).] ([RS_Diag_04067](#))

[SWS_Dem_00524] [If the configuration parameter [DemOccurrenceCounterProcessing](#) is set to [DEM_PROCESS_OCCCTR_TF](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)), the Dem module shall increment the occurrence counter by one, triggered by each [UDS status bit 0](#) (TestFailed) transition from 0 to 1, if the related event is already stored in the [event memory](#).] ([RS_Diag_04067](#))

[SWS_Dem_00580] [If the configuration parameter [DemOccurrenceCounterProcessing](#) is set to [DEM_PROCESS_OCCCTR_CDTC](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)), the Dem module shall increment the occurrence counter by one, triggered by each [UDS status bit 0](#) transition from 0 to 1, if the related event is already stored in the [event memory](#) and the [UDS status bit 3](#) is equal to 1 (refer to chapter 0).] ([RS_Diag_04105](#))

[SWS_Dem_00625] [The Dem module shall not increment the event-specific occurrence counter anymore, if it has reached its maximum value (255, refer to [\[SWS_Dem_00471\]](#)).] ([RS_Diag_04125](#))

7.3.3 Event kind

There are two different types of events:

- BSW-related events (reported via C-API - [Dem_SetEventStatus](#))
- SW-C-related events (reported via RTE operation - [SetEventStatus](#))

This kind is configurable per event (refer to [DemEventKind](#) in [DemEventParameter](#)).

This is necessary because BSW-events may be reported prior to full Dem initialization and need to be buffered (refer to chapter [7.8](#)).

7.3.4 Event destination

The configuration parameter [DemMemoryDestinationRef](#) (refer to [DemDTCAttributes](#)) defines the dedicated storage location(s) of the event and its related data (refer to chapter [7.7.7](#)).

The “permanent [event memory](#)” assignment is implicitly derived from the related DTC kind (refer to chapter [7.4.1](#)). Emission-related events are automatically assigned to the permanent [event memory](#), since the storage of an event as “permanent DTC” is dynamically derived from its current status (handling is described in chapter [7.9.5.8](#)). In this context the term “permanent” relates to an attribute of emission-related events and does not relate only to persistent storage via NvM, which is done for each [event memory](#) type anyway.

The definition and use of the different memory types is OEM specific.

For the Dcm-Dem interface the parameter [DTCOrigin](#) is used to distinguish between the different memory areas. The intention is to allow specific operations on the different memory areas (primary, user defined, permanent and mirror memory).

[SWS_Dem_CONSTR_6104] Limitations on [DemMemoryDestinationRef](#) [If [DemMirrorMemory](#) is configured as [DemMemoryDestinationRef](#), another [DemMemoryDestinationRef](#) on the same event or either [DemPrimaryMemory](#) or [DemUserDefinedMemory](#) shall be configured as a prerequisite. The same event shall not be configured two destinations if one is not [DemMirrorMemory](#).]()

[SWS_Dem_CONSTR_6114] Limitations on [DemMemoryDestinationRef](#) [A DTC can only reference the [event memories](#) via [DemMemoryDestinationRef](#) to the [event memories](#) of the same [DemEventMemorySet](#). The scenario that a DTC references [event memories](#) via [DemMemoryDestinationRef](#) on different [DemEventMemorySet](#) is not supported.]()

7.3.5 Diagnostic monitor definition

A diagnostic monitor is a routine entity determining the proper functionality of a component. This monitoring function identifies a specific fault type (e.g. short to ground, open load, etc.) for a monitoring path. A monitoring path represents the physical system or a circuit, that is being monitored (e.g. sensor input). Each monitoring path is associated with exactly one diagnostic event.

Figure 7.5: Example for a monitor embedded within a SW-C

If the monitor debounces on its own, the reporting API is called only after a qualified result (passed or failed) is available. A report is necessary at least if the result changes. However, usually it is computationally more efficient for the monitor to always call the Dem and should therefore be preferred. Hence, it is implementation specific for the Dem to deal with reports of unchanged results.

If the monitor uses the Dem-internal debouncing mechanism (refer to chapter 7.7.3), the reporting API is called whenever the code with the functional check is executed.

7.3.6 Event dependencies

The priority of events within the assigned [DemComponent](#) and furthermore the dependency relation between the [DemComponent](#)s is used for filtering the storage of error reports to the failure memory.

[SWS_Dem_01126] [Whenever an event reports FAILED, it shall be considered as CONSECUTIVE FAULT, if any other event with higher priority at the same [DemComponent](#) already is FAILED.]()

[SWS_Dem_01127] [Whenever an event reports FAILED, it shall be considered as CONSECUTIVE FAULT, if any parent [DemComponent](#) is FAILED.]()

[SWS_Dem_01128] [The [Dem](#) shall allow to ignore the priority of events of a [DemComponentIgnoresPriority](#)). In this case, the event shall only be considered as CONSECUTIVE FAULT if any parent component is FAILED (other events FAILED status at the same component shall be ignored).] ()

[SWS_Dem_01129] [If a reported failure is not considered as consecutive fault, it shall be considered as CAUSAL FAULT. Causal faults shall be handled normally.] ()

[SWS_Dem_01218] [If a reported failure is not considered as consecutive fault and it has configured a [DemCausalityDelayTime](#), it shall be considered as PRELIMINARY-CAUSAL FAULT. Starting from the point in time where the report of the event occurs, until the [DemCausalityDelayTime](#) is elapsed, the event can be reconsidered as being a consecutive fault. If another failure is reported during this time which has higher priority at the same [DemComponent](#) or at any parent [DemComponent](#), the event shall be reconsidered as consecutive fault. After the time is elapsed, the failure will not be reconsidered.] ()

[SWS_Dem_01130] [A failure which is considered as consecutive fault shall not be stored to the failure memory. (The handling shall be analogous to storage condition not fulfilled).] ()

[SWS_Dem_01211] [A report of [DEM_EVENT_STATUS_FDC_THRESHOLD_REACHED](#) (e.g. either via interface call or when reaching the configured threshold in debounce algorithm) which is considered as consecutive report of a Failed event shall not be stored to the failure memory. The handling shall be analogous to storage condition not fulfilled.] ()

Note: Other reports of [DEM_EVENT_STATUS_FDC_THRESHOLD_REACHED](#) shall not be considered as causal.

[SWS_Dem_01131] [The [Dem](#) shall provide the interface [Dem_GetComponentFailed](#), which allows querying a [DemComponent](#)'s FAILED status.] ()

[SWS_Dem_01132] [If [DemTriggerFiMReports](#) (refer to [DemGeneral](#)) is enabled, the [Dem](#) shall notify the [FiM](#) module [8] on each change of [DemComponent](#) failed status by calling the function [DemTriggerOnComponentStatus](#).] ()

[SWS_Dem_01133] [If the component status is changing and [DemComponentFailedCallbackFnc](#) is configured or [DemComponentFailedCallbackUsePort](#) is set to TRUE, the [Dem](#) shall trigger the callback [DemTriggerOnComponentStatus](#).] ()

[SWS_Dem_CONSTR_06157] [Setting [DemComponentFailedCallbackUsePort](#) to TRUE is only allowed, if [DemComponentFailedCallbackFnc](#) is not configured.] ()

7.3.7 Component availability

[SWS_Dem_01134] [The Dem shall support the availability of `DemComponent`. Components which are not available shall be treated as if they are not included in the system (e.g. `Dem_GetComponentFailed` will return E_NOT_OK).]()

[SWS_Dem_01135] [The interface `Dem_SetComponentAvailable` shall be available to set the availability state of a component.]()

[SWS_Dem_01136] [With setting a `DemComponent` to not available, all assigned events shall also be set as not available.]()

[SWS_Dem_01239] [After startup all `DemComponent`s shall be available.]()

[SWS_Dem_01226] [If a `DemComponent` is set to ‘not available’ via `Dem_SetComponentAvailable`, the Dem shall treat all the dependent components (children) as if they are set as ‘not available’.]()

[SWS_Dem_01227] [If a `DemComponent` is set to ‘not available’ via `Dem_SetComponentAvailable`, the Dem shall set all assigned events to ‘not available’, including the events of all child nodes. The behavior for the events will be analogous to setting each event individually to ‘not available’ (e.g. setting the event status).]()

[SWS_Dem_01228] [If a `DemComponent` is set to ‘not available’ via `Dem_SetComponentAvailable` and any individual event assigned to it (see [SWS_Dem_01227]) is already failed, the individual event will be kept as ‘available’. `Dem_SetComponentAvailable` still shall return E_OK.]()

[SWS_Dem_01229] [If a `DemComponent` is set to available via `Dem_SetComponentAvailable`, all assigned events are also set to ‘available’, including the events of all child nodes (if those nodes are not still set to ‘not available’). The behavior for the individual events will be analogous to setting them individually to ‘available’ (e.g. triggering `InitMonitorForEvent`).]()

[SWS_Dem_01231] [If the function `Dem_SetEventAvailable` is called for an event to set the event to ‘available’, the function shall return E_NOT_OK, in case its related node is current ‘not available’.]()

[SWS_Dem_01232] [If an event is set to available using `Dem_SetEventAvailable` and its component is ‘not available’, `Dem_SetEventAvailable` shall return E_NOT_OK.]()

7.4 Diagnostic trouble code definition

A ‘Diagnostic trouble code’ defines a unique identifier (shown to the diagnostic tester) mapped to a ‘Diagnostic event’ of the Dem module. The Dem provides the status of ‘Diagnostic trouble codes’ to the Dcm module (refer to chapter 7.11.2).

Figure 7.6: DTC configuration

Figure 7.7: OBD-DTC configuration

7.4.1 DTC kind

7.4.2 DTC format

[SWS_Dem_00013] [The [Dem](#) module shall support DTC formats for [DemDTC](#) according to:

- ISO-14229-1[[2](#)]
- SAE J2012 OBD DTC (aka 2-byte DTC) [[13](#)]
- SAE J1939-73[[14](#)]
- ISO 11992-4[[15](#)]
- SAE J2012 WWH-OBD DTC (aka 3-byte DTC) [[13](#)]

]()

The configuration parameter [DemTypeOfDTCSupported](#) is used to specify one of the supported DTC formats defined in [\[SWS_Dem_00013\]](#) of the ECU (refer to [Dem_GetTranslationType](#)). This is required to determine the DTC format value to be reported for ISO-14229-1^[2] service Read DTC Information (0x19).

[SWS_Dem_00645] [The Dem module shall support different DTC numbers for UDS, OBD, and J1939 DTCs based on separate configuration parameters (refer to parameters [DemDTC](#) and [DemObdDTC](#) in [DemConfigSet](#)).] ([RS_Diag_04112](#))

A DTC can have any combination of the three formats (UDS, OBD, and J1939), i.e. one, two, or three formats at the same time. The Dem will therefore handle three DTC value lists internally. The reported format depends on the [Dem_DTCFormatType](#) or is defined by the context of the related API.

[SWS_Dem_00277] [The Dem shall report DTC values as a uint32 with byte 0 = LowByte, byte 1 = MiddleByte, byte 2 = HighByte and byte 3 is unused. For OBD DTC format there are only two bytes (HighByte, LowByte) used. The Dem services shall report these DTCs as a uint32 with byte 1 = LowByte, byte 2 = HighByte, byte 3 is unused and byte 0 = 0x00.] ()

Figure 7.8: DTC Byte Order

Note: The [Dem](#) expects the [SPN](#) and [FMI](#) values of the J1939DTC to be configured according to the J1939 standard. The [Dem](#) will not do any encoding/transcoding. Refer chapter 5.7.1.11 SPN Conversion Method in [\[15\]](#) for details.

[SWS_Dem_01180] [The Dem shall report [DTC](#) values as a uint32 with byte 0 = LowByte, byte 1 = MiddleByte, byte 2 = HighByte and byte 3 is unused. For WWH-OBD DTC format there are only three bytes (HighByte, MiddleByte and LowByte) used. The Dem services shall report these [DTCs](#) as a uint32 with byte 1 = LowByte, byte 2 = HighByte, byte 0 is used as [FTB](#) (as of SAE J2012-DA) [\[13\]](#).] ([RS_Diag_04113](#))

[SWS_Dem_CONSTR_06146] Dependency for DemDtcValue [The OBD DTC [DemDtcValue](#) shall only be present if [DemOBDSupport](#) is set to [DEM_OBD_MASTER_ECU](#) or [DEM_OBD_PRIMARY_ECU](#).] ()

[SWS_Dem_00269] [The function [Dem_GetDTCofEvent](#) shall get the [DTC](#) which is mapped to EventId by the [Dem](#) configuration.] ([RS_Diag_04201](#))

7.4.3 DTC groups

In addition to single DTC values, groups of DTCs can be configured (refer to [Dem-GroupOfDTC](#)), as defined by ISO 14229-1 [2] - Annex D.1. Each DTC group has its own DTC group value assigned (which must be unique to any other DTC and DTC group value). When requesting operations on DTC groups (like ClearDTC and Disable/Enable DTC), the DTGroup is selected by the [DTC](#) value.

[SWS_Dem_01059] [The [DemGroupOfDTC](#) shall represent the values of the DTC Group boundaries.] () Note: A group with the global boundaries 0x000100 and 0xffffe00 does not need to be configured, as the group ALL is automatically defined.

[SWS_Dem_01061] [All the DTCs in the range between the dtc-code of the requested group and the next higher dtcgroup-code shall be treated as belonging to the group.] ()

Note: DTC groups are relevant for the diagnostic service ClearDiagnosticInformation (0x14, refer to [Dem_ClearDTC](#)).

[SWS_Dem_01337] [The Dem shall support the predefined DTC group GroupOfAllDTCs (0xFFFFFFF) within the parameter DTC of [Dem_SelectDTC](#).] ()

[SWS_Dem_01338] [The Dem shall support the predefined DTC group emission related DTCs for WWH-OBD (0xFFFF33) within the parameter DTC of [Dem_SelectDTC](#) if WWH-OBD is supported.] ()

Note, the DTC group 'all DTCs' will not be configured in [DemGroupOfDTC](#), because it has always to be provided by the Dem module

Figure 7.9: DTC group configuration

Taking into consideration that 0xFFFFFFF is an unconfigurable value meaning “all DTCs group”, each of the DTCs configured for a group “X” let’s say, shall have their ids in the open interval (ID_of_group_X, ID_of_next_configured_group) e.g.:

powertrain DTC group → 0x3FFF00	DTC1 → 0x3FFF04 DTC2 → 0x3FFF06 . . DTCn → 0x3FFF0E
body DTC group → 0x7FFF0F	... DTCs in the body DTC group ...

As a configuration constraint of the above mentioned approach on DTC groups, if there is one or more DTC groups configured, there is no way to configure group independent DTCs.

7.4.4 DTC severity

The DTC severity is used to provide information regarding the importance of the specific events according to ISO-14229-1[2], Annex D.3 “DTC severity and class definition”. The [DemDTCSeverity](#) is only available for UDS DTCs.

[SWS_Dem_01291] [If the API [Dem_GetSeverityOfDTC](#) or [Dem_GetNextFilteredDTCAndSeverity](#) is called and for the selected DTC a severity value in [DemDTCSeverity](#) is configured, the [Dem](#) shall set the value configured in [DemDTCSeverity](#) as [DTCSeverity](#).] ([RS_Diag_04071](#))

[SWS_Dem_01292] [If the API [Dem_GetSeverityOfDTC](#) or [Dem_GetNextFilteredDTCAndSeverity](#) is called and for the selected DTC no severity value in [DemDTCSeverity](#) is configured, the [Dem](#) shall set [DEM_SEVERITY_NO_SEVERITY](#) as [DTCSeverity](#).] ([RS_Diag_04071](#))

7.4.5 Functional unit

[SWS_Dem_01293] [If the API [Dem_GetFunctionalUnitOfDTC](#) is called and for the selected DTC a functional unit value in [DemDTCFunctionalUnit](#) is configured, the [Dem](#) shall set the value configured in [DemDTCFunctionalUnit](#) in the out parameter [DTCFunctionalUnit](#).] ([RS_Diag_04071](#))

[SWS_Dem_01294] [If the API [Dem_GetFunctionalUnitOfDTC](#) is called and for the selected DTC no functional unit in [DemDTCFunctionalUnit](#) is configured, the [Dem](#) shall set a value of 0x00 in the out parameter [DTCFunctionalUnit](#).] ([RS_Diag_04071](#))

7.4.6 DTC significance

There are two different significance levels of DTCs:

- fault: classifies a failure, which relates to the component/ECU itself (and requires for example a repair action)
- occurrence: classifies an issue, which indicates additional information concerning insufficient system behavior (and relates for example to a condition out of the ECU's control)

This significance level is configurable per event (refer to [DemDTCSignificance](#) in [DemDTCAttributes](#)) and can be mapped as a data element (refer to [DEM_SIGNIFICANCE](#)).

7.4.7 Suppress DTC output

This chapter describes the dynamic suppression of events/ [DTCs](#) during runtime via [API](#) call. A suppressed [DTC](#) behaves in a way that it is not visible for the tester but can be processed continuously by the diagnostic monitor.

An exemplary use-case could be that the decision to hide a [DTC](#) in a certain market is done by the [SW-C](#) at runtime.

The configuration parameter [DemSuppressionSupport](#) (refer to [DemGeneral](#)) controls the availability of the DTC suppression functionality

[SWS_Dem_00915] [The [Dem](#) shall suppress a [DTC](#) if all related events of this [DTC](#) are not available.] ([RS_Diag_04220](#))

For details see chapter [7.4.8](#).

If there is a one to one relationship between [DTC](#) and event, the [DTC](#) is suppressed if the related event is not available. If the [DTC](#) is a [combined DTC](#), the [DTC](#) is suppressed if all combined events are not available.

Concerning output and query functions, suppressed DTCs are treated as if they are not configured in the system.

[SWS_Dem_01100] Behavior of DTC query functions for suppressed DTCs [In case any of the following APIs is called

- [Dem_GetStatusOfDTC](#)
- [Dem_GetSeverityOfDTC](#)
- [Dem_GetFunctionalUnitOfDTC](#)
- [Dem_ClearDTC](#)

on a single selected [DTC](#) which is suppressed, the [Dem](#) shall return [DEM_WRONG_DTC](#).] ([RS_Diag_04220](#))

[SWS_Dem_01101] [A suppressed [DTC](#) shall not be visible for the following [Dcm](#) query-functions; therefore the following functions shall treat the [DTC](#) as if filter is not matching:

- [Dem_DcmGetDTCOfOBDFreezeFrame](#)
- [Dem_DcmReadDataOfOBDFreezeFrame](#)
- [Dem_DcmGetInfoTypeValue08](#)
- [Dem_DcmGetInfoTypeValue0B](#)

- [Dem_DcmReadDataOfPID01](#)
- [Dem_GetDTCByOccurrenceTime](#)
- [Dem_GetNextFilteredDTC](#)
- [Dem_GetNextFilteredDTCAndFDC](#)
- [Dem_GetNextFilteredDTCAndSeverity](#)
- [Dem_GetNextFilteredRecord](#)
- [Dem_J1939DcmFirstDTCwithLampStatus](#)
- [Dem_J1939DcmGetNextDTCwithLampStatus](#)
- [Dem_J1939DcmGetNextFreezeFrame](#)
- [Dem_J1939DcmSetDTCFilter](#)
- [Dem_J1939DcmGetNumberOfFilteredDTC](#)
- [Dem_J1939DcmGetNextFilteredDTC](#)
- [Dem_J1939DcmSetRatioFilter](#)
- [Dem_J1939DcmGetNextFilteredRatio](#)
- [Dem_J1939DcmReadDiagnosticReadiness1](#)
- [Dem_J1939DcmReadDiagnosticReadiness2](#)
- [Dem_J1939DcmReadDiagnosticReadiness3](#)
- [Dem_SelectFreezeFrameData](#)
- [Dem_SetDTCFilter](#)
- [Dem_SelectExtendedDataRecord](#)

」([RS_Diag_04220](#))

Note: This means, the (external) reporting (e.g. DTC number, UDS status, DTC extended data records, DTC statistical data, [IUMPR](#), ...) of the [DTC](#) is suppressed.

[SWS_Dem_01102] 「[DTC](#) suppression shall not stop event processing of the corresponding [DTC](#).」([RS_Diag_04220](#))

Note: This means that e.g. [event qualification](#), update of environmental data and functional degradation is still processed within the [Dem](#).

Note: If [DTC/freeze frame](#) should not be stored in the fault memory storage conditions should be used in addition.

[SWS_Dem_01307] Functionality of Dem_GetDTCSuppression 「If [Dem_GetDTCSuppression](#) is called, the [Dem](#) shall return the DTC suppression status in the output

parameter `SuppressionStatus`. A value of TRUE means that the DTC was suppressed by a call of `Dem_SetDTCSuppression` with `SuppressionStatus` = TRUE, a value of FALSE means, that the DTC is currently not suppressed.] (*RS_Diag_04220*)

[SWS_Dem_01315] [If `Dem_SetDTCSuppression` is called the `Dem` shall set the suppression status of the selected DTC to value of the parameter `SuppressionStatus`.] (*RS_Diag_04220*)

Also there are various reasons, why a DTC is not processed and thus is not visible for diagnostics, the suppression state itself is only changed by `Dem_SetDTCSuppression`. `Dem_GetDTCSuppression` only evaluates this suppression state.

7.4.8 Availability of events (visibility and computation)

This chapter describes a method to mark events as not available without removing them from the actual configuration. An event which is not available is treated as if it was not included in the Dem configuration.

An exemplary use-case could be that a control unit and its software support different kind of hardware to be controlled. Hardware variants vary in certain parts being available or not available. Still the same control unit and software shall be applied.

1. One calibration set is generated per hardware variant. The application engineers set up a post-build configuration to make sure the software behaves correctly for the hardware. For certain parts not included in a hardware variant, this means that related Events need to be shut down, suppressed. These events shall behave completely neutral, never set their LastFailed, not cause limp-home modes, not be visible to garage services.

=> ECUC parameter `DemEventAvailableInVariant` set to TRUE (enabled) or FALSE (disabled)

2. One calibration covers multiple hardware variants. During production, or even at run-time when hardware is changed (by the garage) some coding bits are written to the control unit, or some network message is received, to change the behaviour of the software in accordance with the changes in hardware. As in 1, certain Events need to be suppressed.

=> ECUC parameter `DemEventAvailableInVariant` set to TRUE (enabled)

=> ECUC parameter `DemEventAvailable` defines the initial availability of an event

=> Interface `Dem_SetEventAvailable` is used to change the availability defined by `DemEventAvailable` during runtime

[SWS_Dem_01343] Enable/disable Events by configuration [The configuration parameter `DemEventAvailableInVariant` shall be used as master to consider an

Event as enabled or disabled. If the configuration parameter `DemEventAvailableInVariant` is set to FALSE, the Dem shall treat the Event as if it is not configured as `DemEventParameter`. If `DemEventAvailableInVariant` is not set or set to TRUE, the Dem shall consider the Event as enabled depending on other sources.] (*SRS_Diag_04126*)

Note: `DemEventAvailableInVariant` allows to disable an Event that is not needed, but included in the software release; even the related SW-C is prevented from making it available through `Dem_SetEventAvailable`.

[SWS_Dem_01344] Dealing with availability of Events [The Dem shall treat an event as unavailable if:

- `DemEventAvailableInVariant == FALSE` or
- `DemEventAvailable == FALSE` or
- `DemEventAvailable` is overwritten by `Dem_SetEventAvailable(FALSE)` or
- The component referenced by `DemComponentClassRef` is not available

] (*SRS_Diag_04126*)

[SWS_Dem_00687] [The Dem shall provide functionality during runtime to treat events as if they were not configured as `DemEventParameter`. The configuration parameter `DemAvailabilitySupport` is used to enable the functionality provided by `Dem_SetEventAvailable()`.] (*RS_Diag_04126*)

[SWS_Dem_01103] [Unavailable events shall not be considered for computation of service \$01 PID \$41.] (*RS_Diag_04126*)

[SWS_Dem_01104] [`IUMPR` ratios referring to an unavailable event shall neither be computed nor reported.] (*RS_Diag_04126*)

[SWS_Dem_01106] [The Dem shall not provide the function `Dem_SetEventAvailable` in VARIANT-POST-BUILD. Rational: In VARIANT-POST-BUILD the initial values are not valid before `Dem_Init` (postbuild initialization time).] (*RS_Diag_04126*)

[SWS_Dem_01108] [If an event is set to unavailable, the corresponding event shall be treated as if it is not configured in the system (e.g. `Dem_SetEventStatus` and `Dem_GetEventUdsStatus` shall return E_NOT_OK). The following APIs are affected:

- `Dem_SetEventStatus`
- `Dem_GetEventUdsStatus`
- `Dem_ResetEventDebounceStatus`
- `Dem_ResetEventStatus`
- `Dem_PrestoreFreezeFrame`
- `Dem_ClearPrestoredFreezeFrame`
- `Dem_GetDebouncingOfEvent`

- `Dem_GetDTCOfEvent`
- `Dem_GetFaultDetectionCounter`
- `Dem_GetEventFreezeFrameDataEx`
- `Dem_GetEventExtendedDataRecordEx`
- `Dem_ClearDTC`
- `Dem_DcmGetDTRData`
- `Dem_RepIUMPRFaultDetect`
- `Dem_RepIUMPRDenRelease`
- `Dem_SetWIRStatus`
- `Dem_SetEventFailedWithSyncFreezeFrame`

]([RS_Diag_04126](#))

Note: The availability of an event may also impact the suppression of a `DTC` (see [[SWS_Dem_00915](#)]).

[SWS_Dem_01109] [When the `API Dem_SetEventAvailable` is called with `AvailableStatus = FALSE`, the Dem shall return `E_NOT_OK` if:

- for the event an event memory entry already exists, or
- any of the event status flags 'testFailed', 'pending', 'confirmed' or 'warningIndicatorRequested' is set

]([RS_Diag_04126](#))

[SWS_Dem_01302] Asynchronous behavior of Dem_SetEventAvailable [The Dem shall process a call of the `Dem_SetEventAvailable` asynchronously. This means that the final result is available at a later point in time.]([RS_Diag_04126](#))

A later point in time is meant to be implementation specific, it could be the next main function and after `Dem_SetEventAvailable` has returned.

[SWS_Dem_01110] [If `Dem_SetEventAvailable` is called with `AvailableStatus == 'false'`, the Dem shall set the UDS status shall be set to `0x00` for this event.]([RS_Diag_04126](#))

Note: If the UDS status changes, the corresponding callbacks are called to properly provide the information about a changed status to the users.

[SWS_Dem_01111] [If `Dem_SetEventAvailable` is called with `AvailableStatus == 'true'`, the Dem shall set the UDS status shall be set to `0x50` for this event.]([RS_Diag_04126](#))

[SWS_Dem_01345] Reaction on calls related to disabled events [If an Event is configured with `DemEventAvailableInVariant` set to FALSE and the API `Dem_SetEventAvailable` is called with `AvailableStatus` = TRUE for this `EventId`, the API `Dem_SetEventAvailable` shall return E_NOT_OK.]()

[SWS_Dem_01230] [If the function `Dem_SetEventAvailable` is called to set an event to 'available', the `Dem` shall trigger the event initialization using `DEM_INIT_MONITOR_REENABLED` as `InitMonitorReason`.]()

[SWS_Dem_01346] [If `Dem_GetEventAvailable` is called with a valid `EventId`, it shall set the output value `AvailableStatus` to the Event's availability and return E_OK.

The availability is determined by the configuration parameter `DemEventAvailable` (modifiable through `Dem_SetEventAvailable`) and `DemEventAvailableCnf` ([[SWS_Dem_01344](#)] ("Dem shall treat an Event as unavailable...").]()

[SWS_Dem_01347] [If `Dem_GetEventAvailable` is called with an invalid `EventId`, the `Dem` shall return E_NOT_OK.]()

7.5 Monitored Component Definition

A monitored component is a part of the system, which is relevant for being checked for proper operation. Malfunctions of the component need to be reported and documented. For this, usually one or multiple monitorings are defined and assigned to the component.

Furthermore the status of such components is relevant and used for influencing the system behavior (status of components may be used in [Fim](#)) and error documentation (filtering of consecutive failure entries).

The `Dem` allows to explicitly define the monitored components as `DemComponent`, defining the relation between events and components and finally allows to define the relation in-between the components.

Figure 7.10: Event dependencies

7.5.1 Definition of components and dependencies

[SWS_Dem_01118] [The `Dem` shall represent monitored components as `DemComponent` with a unique identifier, which is used in interfaces to identify the component.]()

[SWS_Dem_01119] [Each `DemComponent` shall have a boolean status `FAILED`, which represents the information whether the component has errors or not.]()

[SWS_Dem_01120] [The `Dem` shall allow defining relations between `DemComponent`. The relations are directed, which means one component is depending on another component (`DemImmediateChildComponentRef`). Any component which has a directed relation (also over multiple components) is considered as parent component.]()

Example: a -> b -> c -> d
a and b are parents of c
c and d are depending on b

[SWS_Dem_CONSTR_6106] [Only `directed acyclic graph` structures are supported for the dependencies of `DemComponent`.]()

[SWS_Dem_01121] [The Dem shall allow to assign events to DemComponents.]()

[SWS_Dem_CONSTR_6107] [Events may be assigned to exactly one [DemComponent](#) for which the monitoring is testing the error conditions. Multiple events may be assigned to the same component.]()

[SWS_Dem_01122] [The [Dem](#) shall allow sorting the events assigned to a [DemComponent](#) by priority. The priority is defined per event as [DemComponentPriority](#).]()

[SWS_Dem_01123] [On reporting an error (DEM_MONITOR_STATUS_TF) for an event, the assigned [DemComponent](#) shall be set as FAILED in the context of the event report.]()

[SWS_Dem_01124] [On setting a [DemComponent](#) to FAILED, all dependent components shall be set as FAILED.]()

[SWS_Dem_01125] [A [DemComponent](#) shall be set to NOT FAILED, when all assigned events are NOT FAILED (DEM_MONITOR_STATUS_TF) and all parent components are NOT FAILED.]()

7.6 Operation cycle management

The [Dem](#) module provides the possibility to define different operation cycles (ref. to ISO-14229-1[2]).

Examples of operation cycles are:

- ignition on/off cycle
- power up/power down cycle
- OBD driving cycle
- engine warm up cycle
- operation active/passive cycle
- accumulated operating time

The various [operation cycles](#) serve as the basis for calculating cycle-dependent status information such as `testCompleteThisOperationCycle`. In addition, the [operation cycles](#) are the basis for certain functionalities such as the confirmation of failures and the aging of failures. The restart or switch to the next [operation cycle](#) via `Dem_RestartOperationCycle` serves as the trigger for the calculation of these functionalities.

Figure 7.11: Operation cycle configuration

Figure 7.12: Operation and aging cycle assignment

[SWS_Dem_01318] Operation Cycle restart [Calling the function `Dem_Restart-OperationCycle` shall be allowed only after `Dem_PreInit`. In case an operation cycle is restarted before `Dem_Init`, the processing of the restart shall be done after `Dem_Init`.] ([RS_Diag_04178](#))

[SWS_Dem_01316] Operation Cycle restart [The Dem shall only restart operation cycles after the previous restart has been fully processed. In other words this means that there is no Operation Cycle restart queue.] ([RS_Diag_04178](#))

[SWS_Dem_01221] [The `Dem` allows definition of dependent operation cycles using `DemLeadingCycleRef` parameter. Whenever the parameter is set, the `operation cycle` is considered as a dependent `operation cycle`. Whenever the parameter is not set, the `operation cycle` is considered as "normal" `operation cycle`.] (*RS_Diag_04129, RS_Diag_04133*)

[SWS_Dem_01222] [If the `operation cycle` passed to `Dem_SetCycleQualified` is not configured at all, the `Det` error `DEM_E_WRONG_CONFIGURATION` shall be reported.] (*RS_Diag_04129*)

[SWS_Dem_01317] [The `Dem` shall store the qualification state of the dependent operation cycles over power cycles.] (*RS_Diag_04178*)

[SWS_Dem_01224] Operation Cycle restart [Whenever an `operation cycle` is requested to be restarted via `Dem_RestartOperationCycle`, all `operation cycles` which are depending on the selected `operation cycle` shall also be restarted, but only if they are qualified] (*RS_Diag_04178*)

Note: Setting a dependent operation cycle as qualified will not start the operation cycle, even if the leading operation cycle has been started before.

[SWS_Dem_01225] Operation Cycle restart [When restarting a dependent operation cycle, its `operation cycle` qualification shall be reset.] (*RS_Diag_04178*)

[SWS_Dem_01234] [The API `Dem_GetCycleQualified` shall provide the qualification state of the requested operation cycle in the out parameter "isQualified".] (*RS_Diag_04129*)

[SWS_Dem_01235] [If the operation cycle passed to `Dem_GetCycleQualified` is not configured at all, the `Det` error `DEM_E_WRONG_CONFIGURATION` shall be reported.] (*RS_Diag_04129*)

[SWS_Dem_01220] [If `DemOBDDelayedDCYConfirmedAndMIL` is set to TRUE, the behavior of events linked to the OBD driving cycle (`DemOBDDrivingCycleRef`) shall be changed:

If the operation cycle is not qualified, status reports shall be processed, except update of the confirmed status. At the moment the OBD driving cycle is set to qualified, the `Dem` shall execute computations required to reach the confirmed states of events collected during the "not qualified" phase of the cycle.] (*RS_Diag_04129*)

OBD legislation requires specific implementation of operation cycles. For emission related ECUs it is mandatory to implement these accordingly.

7.6.1 Operation Cycle Counters

7.6.1.1 Cycles since last failed

The counter Cycles since last failed is representing the number of operation cycles since the DTC fault detection counter last reached its maximum value +127 (since

DTC information was last cleared). All operation cycles, including those during which the test was not completed shall be included.

[SWS_Dem_00984] [If the counter ‘Cycles since last failed’ is mapped to an extended data record (`DemInternalDataElement` set to `DEM_CYCLES_SINCE_LAST_FAILED`), it shall be available per ‘event related data’ record.] ([RS_Diag_04190](#))

[SWS_Dem_00771] [If internal debounce counter reach `DemDebounceCounterFailedThreshold` (latest UDS status bit 0 changes from 0 to 1) and this counter is not stored in `event memory` and there are available `event memory entry`, new entry shall be allocated and the counter shall be started and initialized to zero.] ()

[SWS_Dem_00772] [If internal debounce counter reach `DemDebounceCounterFailedThreshold` (latest UDS status bit 0 changes from 0 to 1) and this counter is stored in `event memory` the counter shall initialized to zero.] ([RS_Diag_04068](#))

[SWS_Dem_00773] [In case the counter is available and started, it shall be incremented at the end of the referenced operation cycle (refer to `DemOperationCycleRef`).] ([RS_Diag_04178](#))

[SWS_Dem_00774] [The counter shall be implemented as one byte. If any count operation occurs which would cause a counter to roll over past 0xFF then the count value shall instead be maintained at 0xFF.] ([RS_Diag_04068](#))

7.6.1.2 Cycles since first failed

The counter Cycles since first failed is representing the number of operation cycles since the DTC fault detection counter first reached its maximum value of +127 (since DTC information was last cleared). All operation cycles, including those in which the test has not been completed shall be included.

[SWS_Dem_00775] [If the counter ‘Cycles since first failed’ is mapped to an extended data record (`DemInternalDataElement` set to `DEM_CYCLES_SINCE_FIRST_FAILED`), it shall be available per ‘event related data’ record.] ([RS_Diag_04190](#))

[SWS_Dem_00776] [If internal debounce counter reach `DemDebounceCounterFailedThreshold` (latest UDS status bit 0 changes from 0 to 1) and this counter is not stored in `event memory` and there are available `event memory entry`, new entry shall be allocated and the counter shall be started and initialized to zero.] ([RS_Diag_04125](#))

[SWS_Dem_00777] [In case the counter is available and started, it shall be incremented at the end of the referenced operation cycle (refer to `DemOperationCycleRef`).] ()

[SWS_Dem_00778] [The counter shall be implemented as one byte. If any count operation occurs which would cause a counter to roll over past 0xFF then the count value shall instead be maintained at 0xFF.] ([RS_Diag_04068](#))

7.6.1.3 Failed cycles

The counter Failed cycles is representing the number of operation cycles during which the DTC fault detection counter reached its maximum value of +127 (since DTC information was last cleared)

[SWS_Dem_00779] [If the counter ‘Failed cycles’ is mapped to an extended data record (`DemInternalDataElement` set to `DEM_FAILED_CYCLES`), it shall be available per ‘event related data’ record.] ([RS_Diag_04068](#), [RS_Diag_04189](#), [RS_Diag_04190](#))

[SWS_Dem_00780] [If internal debounce counter reach `DemDebounceCounterFailedThreshold` (latest UDS status bit 0 changes from 0 to 1) and this counter is not stored in `event memory` and there are available `event memory entry`, new entry shall be allocated and the counter shall be started and initialized to zero.] ([RS_Diag_04105](#))

[SWS_Dem_00781] [In case the counter is available and started, it shall be incremented at the end of the referenced operation cycle (refer to `DemOperationCycleRef`) in case the UDS status bit 1 is set to 1.] ([RS_Diag_04105](#))

[SWS_Dem_00782] [The counter shall be implemented as one byte. If any count operation occurs which would cause a counter to roll over past 0xFF then the count value shall instead be maintained at 0xFF.] ([RS_Diag_04124](#))

7.7 Event memory description

The ‘`event memory`’ is defined as a set of event records located in a dedicated memory block. The event record includes at least the UDS status and the event related data.

[SWS_Dem_00010] [The Dem module shall support the primary `event memory`.] ()

[SWS_Dem_00548] [If configured (refer to [\[SWS_Dem_00162\]](#)) the Dem module shall support the additional `event memories` (user defined, mirror, permanent).] ()

[SWS_Dem_01247] [Configured via the container `DemEventMemorySet`, the Dem supports multiple independent `event memories`. Each API call with `DemClient` as parameter, shall be applicable only on the configured `event memory` (primary, mirror or user defined) for this client.] ([RS_Diag_04164](#))

[SWS_Dem_CONSTR_06118] Unique DTC values within a single event memory [The [DemDtcValue](#) shall be unique within all [DTCs](#) referencing the same event memory.]()

[SWS_Dem_CONSTR_06119] Unique OBD DTC values within an ECU [The [DemDtcValue](#) shall be unique within all [DTCs](#) referencing the same event memory.]()

The [Dem](#) can be configured to support more than one [DemEventMemorySet](#). This allows the [Dem](#) to store [DTCs](#) and [event related data](#) of more than one diagnostic server. Each [DemEventMemorySet](#) is treated as independent entity. Changes in one [DemEventMemorySet](#) affect only the local addressed [DemEventMemorySet](#) and are not visible in another [DemEventMemorySet](#).

As a result of this, operations such as ClearDTC on one [event memory](#) only effects the addressed [DemEventMemorySet](#). In other words, a ClearDTC operation has no impact on DTCs or event related data in a different [DemEventMemorySet](#).

[SWS_Dem_01217] [In order to calculate the user defined memory ID from [Dem_DTCOriginType](#), the Dem shall subtract a value of 0x0100 from the obtained value if the value is in the range of [0x0100, 0x01FF].] ([RS_Diag_04214](#))

The size of the different [event memories](#) is configurable in the [Dem](#) configuration.

[SWS_Dem_00162] [The [Dem](#) shall provide configuration parameters to adapt the fault memory size to the ECU memory space available (refer to configuration parameters [DemMaxNumberEventEntryPrimary](#), [DemMaxNumberEventEntryMirror](#) or [DemMaxNumberEventEntryUserDefined](#)).]()

[SWS_Dem_00329] [For storing to non-volatile memory the Dem shall use the NVRAM Manager.] ([RS_Diag_04077](#))

For details see chapter [7.11.5](#).

The following figure shows an example of a logical Dem [event memory](#) layout.

* only at the second appearance, up to the maximal number of freeze frames
 1 frequency (occurrence) counter only increments

Figure 7.13: Example of a logical Dem event memory layout

If there are limitations of the memory size, it is necessary to provide overflow indication of the [event memory](#) and a displacement strategy (refer to chapter [7.7.2](#)).

7.7.1 Event status management

The ‘Event Status Management’ is the Dem’s ability to record and retain events, event status and associated data.

[SWS_Dem_00330] [The Dem module shall provide the capability to report the status of an event allowing a diagnostic monitor to inform the Dem about the result of the internal diagnostic test (refer to [Dem_SetEventStatus](#)).] ([RS_Diag_04067](#))

[SWS_Dem_01333] [The API [Dem_SetEventStatusWithMonitorData](#) shall have the same functionality as [Dem_SetEventStatus](#) with the only difference that it provides further parameters with data to store in an event related data.] ()

The monitors, which are located in the application, should call the function ([Dem_SetEventStatus](#)) to report an event status as soon as a new test result is available. This will be done independently of the current state of the Dem module (refer to Figure [7.14](#)).

Figure 7.14: Example for using Dem_SetEventStatus

[SWS_Dem_01352] Setting event failed with synchronous freeze frame processing [If `Dem_SetEventFailedWithSyncFreezeFrame` is called, the Dem shall process the event status in the same way a call of `Dem_SetEventStatus` with `DEM_EVENT_STATUS_FAILED`.] ([RS_ids_00400](#))

Note: An event reported with `Dem_SetEventFailedWithSyncFreezeFrame` is not debounced and the TestFailed Bit will be set to 1 if other conditions such as enabled conditions are not blocking the event status from being updated.

[SWS_Dem_01353] Synchronous snapshot record processing [If `Dem_SetEventFailedWithSyncFreezeFrame` is called, the Dem shall capture the UDS snapshot record data synchronous within the call of this function.] ([RS_ids_00400](#))

Legislated freezeframes or J1939 freeze frames are not affected by SWS_Dem_01353.

[SWS_Dem_01354] Only C-Callout data capturing for synchronous snapshot record processing [For each `DemEventParameter` with `DemEventReportingType` set to `IMMEDIATE_FAIL_AND_SYNCHRONOUS_PROCESSING`, the `DemFreezeFrameClass` referenced from the event DTC, shall have only `DemDidClass` with `DemDataElementClass` referencing a `DemExternalCSDataElementClass` that has `DemDataElementUsePort` set to false.] ([RS_ids_00400](#))

[SWS_Dem_01355]{DRAFT} Optional callback after synchronous snapshot record processing [If `DemEventReportingType` is set to `IMMEDIATE_FAIL_AND_SYNCHRONOUS_PROCESSING`, the Dem shall call the configured callback `Dem_CallbackEventSyncStorageProcessed` when the Dem has processed the `Dem_SetEventFailedWithSyncFreezeFrame` call and is ready to receive the next call of `Dem_SetEventFailedWithSyncFreezeFrame` for that event.] ([RS_ids_00400](#))

[SWS_Dem_01356]{DRAFT} CallbackEventSyncStorageProcessed only for synchronous reporting event [The `Dem_CallbackEventSyncStorageProcessed` shall be only configured for events that have `DemEventReportingType` set to `IMMEDIATE_FAIL_AND_SYNCHRONOUS_PROCESSING`.] ([RS_ids_00400](#))

[SWS_Dem_00331] [The Dem module shall provide the capability to reset the failed status of an event without reporting a passed result (refer to [Dem_ResetEventStatus](#)).] ([RS_Diag_04179](#))

Note: [Dem_ResetEventStatus](#) does not mean an event status report (like done by [Dem_SetEventStatus](#)). After the call, the monitor status is not qualified or tested.

Monitors will use the function [Dem_ResetEventStatus](#) in order to deactivate limp home and switch back to normal operation. At this point in time, the monitor has typically not been OK-tested and therefore [Dem_SetEventStatus](#) with tested and passed cannot be used.

[SWS_Dem_00187] Behavior of Dem_ResetEventStatus [The function [Dem_ResetEventStatus](#) shall set the [event status bit](#) 0 (TestFailed) to 0 and reset the Dem-internal debounce algorithm to initial values if configured. The [Dem](#) shall execute this action asynchronously at a later point in time.] ([RS_Diag_04067](#))

A later point in time means that the exact moment is implementation specific. This could be the next main function and after [Dem_ResetEventStatus](#) has returned. Also a possible call of the status change callback is triggered asynchronously.

Note: The function [Dem_ResetEventStatus](#) does not change the monitor status and [UDS status bit](#) 6 and does not clear the pre-stored freeze frame.

[SWS_Dem_00638] [The function [Dem_ResetEventStatus](#) shall return [E_NOT_OK](#), if the event was already tested this operation cycle ([UDS status bit](#) 6 is set to 0).] ([RS_Diag_04067](#))

[SWS_Dem_00051] [If the API [Dem_GetEventUdsStatus](#) is called, the Dem shall provide the current [event status byte](#) of a specific event.] ([RS_Diag_04067](#))

Note: The function [Dem_GetEventUdsStatus](#) is provided to be used by SW-Cs or other BSW modules (e.g. FiM) on event-level. The Dcm uses the function [Dem_GetStatusOfDTC](#) on DTC-level instead.

[SWS_Dem_00844] [The Dem shall provide a function [Dem_GetDebouncingOfEvent](#) () that reports the debounce status of an event. The outparameter ‘DebouncingState’ returns the debouncing incl. intermediate states. One particular OBD specific bit shall support the [DTR](#) update trigger if test is complete and debouncing is at its limit while the enable and storage conditions are met.] ([RS_Diag_04068](#))

The [Dem](#) supports a configuration per event to forbid to reset the event in the same operation cycle.

[SWS_Dem_01208] [If the configuration parameter [DemEventRecoverableInSameOperationCycle](#) is set to FALSE, a report of PASSED (directly via [Dem_SetEventStatus](#) or indirectly after Debouncing) will be ignored if the event status byte has the “TestFailedThisOperationCycle” flag is set to 1.] ([RS_Diag_04151](#))

Note: Debouncing is done independently from the value [DemEventRecoverableInSameOperationCycle](#). The [FDC](#) can reach -128 independently from the setting of [DemEventRecoverableInSameOperationCycle](#).

[SWS_Dem_01209] [The Dem shall perform the configured debouncing independently from the setting of the configuration parameter `DemEventRecoverableInSameOperationCycle`. I.e. if `DemEventRecoverableInSameOperationCycle` is set to FALSE and the monitor for this event reports PREPASSED the Dem shall still process the debouncing (e.g. decrement the counter).] (*RS_Diag_04151*)

[SWS_Dem_01250] [If `DemMultiEventTriggering` is configured and any of the APIs:

- `Dem_SetEventStatus`
- `Dem_ResetEventStatus`
- `Dem_PrestoreFreezeFrame`
- `Dem_ClearPrestoredFreezeFrame`
- `Dem_ResetEventDebounceStatus`
- `Dem_SetEventFailedWithSyncFreezeFrame`

is called with an EventId that is referenced by `DemMultiEventTriggeringMasterEventRef` of a `DemMultiEventTriggering`, for each `DemMultiEventTriggeringSlaveEventRef` of this `DemMultiEventTriggering` the Dem shall trigger the same API calls with identical parameters only the EventId parameter shall be replaced with the event referenced from `DemMultiEventTriggeringSlaveEventRef`.] (*RS_Diag_04165*)

[SWS_Dem_01339] [The Dem shall not support calls of

- `Dem_SetEventStatus`
- `Dem_ResetEventStatus`
- `Dem_PrestoreFreezeFrame`
- `Dem_ClearPrestoredFreezeFrame`
- `Dem_ResetEventDebounceStatus`
- `Dem_SetEventFailedWithSyncFreezeFrame`

with an EventId that is referenced by any of the `DemMultiEventTriggeringSlaveEventRef` in container `DemMultiEventTriggering` or by `DemStorageConditionReplacementEventRef`. These events are exclusively used for internal triggering. The behavior of the Dem is undefined if any of those APIs are called in this situation.] (*RS_Diag_04165*)

7.7.1.1 Status bit support

[SWS_Dem_00006] [The Dem module shall by default implement the current set of all UDS status bits according to the definition in ISO-14229-1[2] for each diagnostic event.] ([RS_Diag_04067](#))

Note: For this specification, the UDS status byte of ISO-14229-1[2] for events is represented by the Dem data type `Dem_UdsStatusByteType` (defined in chapter 8.6.1.21). If particular UDS status bits do not need to be supported (refer also to [\[SWS_Dem_00060\]](#)), such optimizations or limitations may be implemented vendor-specific.

[SWS_Dem_01276] [If the `API Dem_GetEventUdsStatus` is called, the event from the parameter `EventId` exists and is available, the `Dem` shall copy the `UDS status byte` into the out parameter `UdsStatusByte` and return `E_OK`.] ([RS_Diag_04067](#))

For details see chapter [7.4.8](#).

[SWS_Dem_01277] [If the `API Dem_GetEventUdsStatus` is called, the event from the parameter `EventId` does not exists or is unavailable, the `Dem` shall return `E_NOT_OK`.] ([RS_Diag_04067](#))

For details see chapter [7.4.8](#).

7.7.1.2 Monitor status and UDS status update

Status bit processing is an essential part of the `Dem` functionality. SWCs or BSW modules frequently report monitor results via the `API Dem_SetEventStatus`. A call of these functions will trigger the status bit processing of the `Dem`.

[SWS_Dem_01278] [The `Dem` shall provide a monitor status per event to store current monitor state information. The monitor status contains the information as defined in `Dem_MonitorStatusType`.] ([RS_Diag_04067](#))

[SWS_Dem_01279] [The `Dem` shall perform the counter based event debouncing synchronously within the context of the calling `Dem_SetEventStatus` function.] ([RS_Diag_04068](#))

[SWS_Dem_01280] [Upon call of `Dem_SetEventStatus` and after debouncing, the `Dem` shall process the monitor status in the same manner as the UDS status:

- Bit0 (TestFailed) according to [\[SWS_Dem_00386\]](#)
- Bit1 (TestNotCompleteThisOperationCycle) according to [\[SWS_Dem_00394\]](#).

The monitor status byte processing shall be done synchronously within the context of the calling `Dem_SetEventStatus` function.] ([RS_Diag_04067](#))

[SWS_Dem_01281] [If the parameter `DemGeneralCallbackMonitorStatusChangedFnc` is configured, the `Dem` shall call this configured C function with the signature of `<Module>_DemTriggerOnMonitorStatus.`] (*RS_Diag_04067*)

[SWS_Dem_01282] [Upon processing the monitor status, the `Dem` shall call the monitor status changed callback functions:

- `<Module>_DemTriggerOnMonitorStatus`

whenever the monitor status has changed.] (*RS_Diag_04067*)

[SWS_Dem_01283] [Upon processing the monitor status for reported event with `DemEventKind = DEM_EVENT_KIND_SWC`, the `Dem` shall call the monitor status changed callback C/S Interface `CallbackMonitorStatusChange` whenever the monitor status has changed and a C/S interface is configured for this event.] (*RS_Diag_04067*)

[SWS_Dem_CONSTR_06120] Dependency for DemGeneralCallbackMonitorStatusChangedFnc [The `DemGeneralCallbackMonitorStatusChangedFnc` shall only be present if `DemGeneralInterfaceSupport` is set to TRUE.] ()

Limitation: The usage of `monitorStatusChange` via `RTE` is limited to SWC-monitorings. All basic software monitorings cannot be covered with this callback via `RTE`. To get complete `statusChange` information of all monitorings in a `SW-C`, the `eventStatusChange` callbacks should be used.

The `CallbackMonitorStatusChange` and `GeneralCallbackMonitorStatusChanged` via `RTE` is furthermore limited to monitorings, which are exclusively changing its status in known contexts. E.g. if a monitor status is changed from CDD (e.g. `Dem_SetEventAvailable` via C-function call), the monitor status change callback via `RTE` must not be used.

Rational: AUTOSAR `RTE` requires that calls from a `BSW` to a `SW-C` via `RTE` are done in a known call context. For the synchronous monitor status changed callbacks, this is only possible for events reported from a `SW-C`. For events reported from a `BSW` module it is not possible to provide the calling context to the `RTE`. As a result of this, the `Dem` provides the C/S interface `CallbackMonitorStatusChange` only for events that are reported from a `SW-C`. For events reported from `BSW` modules, no such C/S interface is provided. Furthermore, the interface `GeneralCallbackMonitorStatusChanged` is not provided as C/S via `RTE`, as this callback could only be called for events reported from a `SW-C` and not for events reported from `BSW` modules. This would obviously lead to confusion.

If it is required to have a general synchronous reaction in a `SW-C` on monitor status changed callbacks, the synchronous reaction could be handled within the scope of a `CDD` using `<Module>_DemGeneralTriggerOnMonitorStatus` or `<Module>_DemTriggerOnMonitorStatus`.

[SWS_Dem_CONSTR_6116] Limited use of monitor status change callbacks to events reported from SW-Cs only [If `Dem_SetEventAvailable` is called from a `Cdd` or `BSW` module, the corresponding monitor status changed callback can only be used as C-function, but not via `RTE` interface.] ()

[SWS_Dem_01284] [When processing a clear DTC command (e.g. via `Dem_ClearDTC`), the `Dem` shall set the monitor status assigned to the cleared DTCs to 0x02.] ([RS_Diag_04067](#))

[SWS_Dem_01285] [The `Dem` shall process the UDS status asynchronously. This means it is calculated outside the context of the calling `Dem_SetEventStatus` function.] ([RS_Diag_04067](#))

[SWS_Dem_01286] [If the API `Dem_SetEventStatus` is called and the `Dem` has synchronously processed the reported monitor status according to [\[SWS_Dem_01280\]](#) and the corresponding UDS status (see [\[SWS_Dem_01285\]](#)) cannot be processed, the `Dem` shall report the runtime error `DEM_E_UDS_STATUS_PROCESSING_FAILED`.] ([RS_Diag_04067](#))

Figure 7.15: Synchronous and asynchronous event processing

Note: Refer to chapter [7.7.2](#) for a detailed description about the `event memory` management.

[SWS_Dem_01064] [The mirror memory is not relevant for calculation of the UDS status.] ([RS_Diag_04131](#))

[SWS_Dem_01287] [If the API `Dem_GetMonitorStatus` is called, the `Dem` shall copy the current monitor status into the out parameter `MonitorStatus` and return `E_OK`.] ([RS_Diag_04067](#))

[SWS_Dem_01288] [If the API `Dem_GetMonitorStatus` is called with an invalid `EventId` the `Dem` shall return `E_NOT_OK`.] ()

[SWS_Dem_01326] [The monitor status shall be initialized within `Dem_Init`. Any call to `Dem_GetMonitorStatus` shall return `E_NOT_OK` if the monitor status is uninitialized.] ([RS_Diag_04031](#))

7.7.1.3 Status bit transitions

This section describes the behavior of the individual status bits of the [UDS status byte](#) (refer to ISO-14229-1[2], UDS status byte - bit transitions).

[SWS_Dem_00385] [After a clear command has been applied to a specific DTC the Dem module shall set the [UDS status byte](#) to 0x50 (readiness bits 4 and 6 set to 1, and all others are set to zero).] ([RS_Diag_04067](#))

For details see chapter [7.7.2.2](#).

Note: The value of the [UDS status byte](#) after a clear command has been applied represents the delivery status (initial state) of this byte as well.

[SWS_Dem_00386] [The Dem module shall implement the status bit transitions for [UDS status bit 0](#).] ([RS_Diag_04067](#))

For details see figure [7.16](#).

[SWS_Dem_00387] [The Dem module shall support the configuration parameter [DemStatusBitStorageTestFailed](#) (refer to [DemGeneral](#)) to determine whether the information for [UDS status bit 0](#) is stored volatile or non-volatile.] ([RS_Diag_04067](#))

[SWS_Dem_00388] [If the configuration parameter [DemStatusBitStorageTestFailed](#) is set to False, the Dem module shall not retain the information for [UDS status bit 0](#) over power cycles (volatile)] ([RS_Diag_04067](#))

[SWS_Dem_CONSTR_6113] Configuration of the test failed status bit storage
 [For WWH-OBD ECU the [DemStatusBitStorageTestFailed](#) shall be set to True.] ()

[SWS_Dem_00525] [If the configuration parameter [DemStatusBitStorageTestFailed](#) is set to True, the Dem module shall retain the information for [UDS status bit 0](#) over power cycles (non-volatile).] ([RS_Diag_04067](#))

Figure 7.16: UDS status bit 0 TestFailed logic

[SWS_Dem_00389] [The Dem module shall implement the status bit transition for [UDS status bit 1](#).] ([RS_Diag_04067](#))

For details see figure [7.17](#).

Note: The information for event status bit 1 (TestFailedThisOperationCycle) is non-volatile, if the PendingDTC bit is used (refer to [\[SWS_Dem_00006\]](#)) or if the Dem module supports operation cycles over power cycles (refer to [DemOperationCycleStatusStorage](#)).

Figure 7.17: UDS status bit 1 TestFailedThisOperationCycle logic

[SWS_Dem_00390] [The Dem module shall implement the status bit transition for [UDS status bit 2](#).] ([RS_Diag_04067](#))

For details see figure [7.18](#).

[SWS_Dem_01183] [The information for [UDS status bit 2](#) needs to be stored non-volatile.] ()

Figure 7.18: UDS status bit 2 PendingDTC logic

[SWS_Dem_00391] [The Dem module shall implement the status bit transition for [UDS status bit 3](#).] ([RS_Diag_04067](#))

For details see figure [7.19](#).

Note: The information for event status bit 3 (ConfirmedDTC) is non-volatile (but it is also calculable based on the respective [event memory](#) entry).

Figure 7.19: UDS status bit 3 ConfirmedDTC logic

Note: The “AgingCriteriaFulfilled” condition is specified by [\[SWS_Dem_00498\]](#). The “FaultRecordOverwritten” condition is specified by [\[SWS_Dem_00409\]](#).

[SWS_Dem_00392] [The Dem module shall implement the status bit transition for UDS status bit 4.] ([RS_Diag_04067](#))

For details see figure 7.20.

Note: The information for event status bit 4 (TestNotCompletedSinceLastClear) is non-volatile.

Figure 7.20: UDS status bit 4 TestNotCompletedSinceLastClear logic

[SWS_Dem_00393] [The Dem module shall implement the status bit transition for UDS status bit 5.] ([RS_Diag_04067](#))

For details see figure 7.21.

Note: The information for UDS status bit 5 (TestFailedSinceLastClear) is non-volatile.

Figure 7.21: UDS status bit 5 TestFailedSinceLastClear logic

Note: The relevance of “AgingCriteriaFulfilled” condition (specified by [\[SWS_Dem_00498\]](#)) and “FaultRecordOverwritten” condition (specified by [\[SWS_Dem_00409\]](#)) depends on the configuration parameter `DemStatus-BitHandlingTestFailedSinceLastClear` (refer to [DemGeneral](#)).

[SWS_Dem_00394] [The Dem module shall implement the status bit transition for UDS status bit 6.] ([RS_Diag_04067](#))

For details see figure 7.22.

Note: The information for UDS status bit 6 (TestNotCompleteThisOperationCycle) needs to be stored non-volatile, if the PendingDTC bit is used (refer to [\[SWS_Dem_00006\]](#)), or if the Dem module supports operation cycles over power cycles (refer to [DemOperationCycleStatusStorage](#)).

Figure 7.22: UDS status bit 6 TestNotCompleteThisOperationCycle logic

[SWS_Dem_00395] [The Dem module shall implement the status bit transition for UDS status bit 7 (WarningIndicatorRequested).] ([RS_Diag_04067](#))

For details see figure [7.23](#).

Note: The information for UDS status bit 7 (WarningIndicatorRequested) may be volatile (because it is calculated based on the assigned warning indicator states).

Figure 7.23: UDS status bit 7 WarningIndicatorRequested logic

Note: The “WarningIndicatorOffCriteriaFulfilled” and the “WarningIndicatorOnCriteriaFulfilled” condition are specified in chapter [7.7.9](#).

Note: ISO-14229-1[\[2\]](#) additionally specifies “warning indicator not requested on due to latched failsafe for particular DTC” as condition. This has to be ensured by the monitor.

7.7.1.4 Active/Passive status

If an event gets qualified as failed, it becomes active. If the event gets qualified as passed, it becomes passive. This status can be derived from the event status byte.

As the [UDS status bit 0](#) is configurable in persistent storage ability (refer to configuration parameter [DemStatusBitStorageTestFailed](#)), also the meaning of active/passive is influenced:

- If the TestFailed bit is stored non-volatile, “event active” equals to TestFailed = 1 and “event passive” equals to TestFailed = 0.
- If the TestFailed bit is only stored volatile, additionally the information, if the event was already tested/reported this power cycle, is required. As long, as this information is not present, the active/passive status is undefined.

Note: There are also ECUs, where all monitors run during startup phase. In this case, it is also sufficient, to map the active/passive status directly to the TestFailed bit.

7.7.1.5 Notification of status bit changes

The Dem module can inform the monitor and/or other components about the status change of the event or DTC.

Note: For asynchronous event processing, the Dem module will trigger the respective notification functions twice per event/DTC qualification.

[SWS_Dem_00016] [The Dem module shall trigger the event-specific callback-function `EventUdsStatusChanged` on each UDS status change.] ([RS_Diag_04067](#))

Note: The Dem module does not evaluate the return value (e.g. if other than E_OK) of this callback function.

Note: The configuration container `DemCallbackEventUdsStatusChanged` (in `DemEventParameter`) is used to specify one or more ports/c-callbacks per event.

Note: The respective callback-functions for FiM are specified in chapter [7.10](#).

Figure 7.24: EventStatusChanged callback configuration

[SWS_Dem_00284] [The Dem module shall trigger the callback function configured in `DemCallbackDTCStatusChanged` on every `DemDTC` status change.] ([SRS_BSW_00457](#))

[SWS_Dem_00986] [The Dem module shall trigger the callback function configured in `DemCallbackOBDDTCStatusChanged` on every `DemObdDTC` status change.] ([SRS_BSW_00457](#))

[SWS_Dem_00987] [The Dem module shall trigger the callback function configured in `DemCallbackJ1939DTCStatusChanged` on every J1939 DTC status change.] ([SRS_BSW_00457](#))

Note: The Dem module does not evaluate the return value (e.g. if other than E_OK) of this callback function.

Note: The result of `EventUdsStatusChanged` may only be different to the result of `DTCStatusChanged` in case of `event combination` (refer to chapter [7.7.5](#)).

Note: The configuration containers `DemCallbackDTCStatusChanged`, `DemCallbackOBDDTCStatusChanged` and `DemCallbackJ1939DTCStatusChanged` are used to specify one or more ports/c-callbacks for the Dem module globally.

Figure 7.25: DTCStatusChanged callback configuration

7.7.2 Event memory management

The [event memory](#) management defines as the process of adding, updating and removing [event memory entries](#) in and out of the Dem module. The Dem module determines if the [event memory entry](#) is new or currently exists in the [event memory](#).

Note: The requirements in this section do not determine the software implementation but describe the behavior of the ECU towards requests from the test tool.

[SWS_Dem_01199] [The Dem module shall support the configuration parameter [Dem-MemoryDestinationRef](#) to define the destination memory/memories for individual DTCs.]()

When using the [Dem](#) interfaces, [Dem_DTCOriginType](#) selects the destination memories by evaluating the possible [DemMemoryDestinationRef](#).

Note: OBD relevant DTCs can be stored in primary or user defined [event memory](#).

[SWS_Dem_01063] [The user defined memory shall have the same behavior as the primary memory(event retention, event prioritization, [aging](#), displacement).] ([RS-Diag_04131](#))

Note: The mirror memory may have a different behaviour which is project specific and is not described in this document.

Figure 7.26: General diagnostic event storage processing

7.7.2.1 Event retention

Event retention defines the ability of the Dem module to record and handle events (DTCs), UDS status information and event related data (e.g. freeze frames, extended data).

Figure 7.27: General diagnostic event retention processing

There are several different strategies in the market when to allocate an [event memory entry](#). Therefore, the Dem module has the capability to configure the primary trigger to allocate an [event memory entry](#). Beside the primary trigger there might be secondary triggers (refer [DemFreezeFrameRecordTrigger](#)) mainly to update content of event [event memory](#) (e.g. to have most recent update FreezeFrames).

[SWS_Dem_00783] If an event

1. gets qualified as failed ([UDS status bit 0](#) changes from 0 to 1) and
2. the configuration parameter [DemEventMemoryEntryStorageTrigger](#) is set to [DEM_TRIGGER_ON_TEST_FAILED](#) or [DEM_TRIGGER_ON_FDC_THRESHOLD](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)) and
3. no [event memory entry](#) exist,

the Dem module shall try to allocate an [event memory entry](#) in its configured [event memory](#) (refer to [DemMemoryDestinationRef](#)).] ([RS_Diag_04105](#))

For details see figure [7.27](#).

[SWS_Dem_00784] [If an event

1. gets pending ([UDS status bit 2](#) changes from 0 to 1) and
2. the configuration parameter [DemEventMemoryEntryStorageTrigger](#) is set to [DEM_TRIGGER_ON_TEST_FAILED](#) or [DEM_TRIGGER_ON_FDC_THRESHOLD](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)) and
3. no [event memory](#) is existing,

the Dem module shall try to allocate an [event memory entry](#) in its configured [event memory](#) (refer to [DemMemoryDestinationRef](#)).] ([RS_Diag_04105](#))

For details see figure [7.27](#).

[SWS_Dem_00922] [If an event

1. is pending ([UDS status bit 2](#) is set to 1) and gets re-qualified as failed ([UDS status bit 0](#) changes from 0 to 1) and
2. the configuration parameter [DemEventMemoryEntryStorageTrigger](#) is set to [DEM_TRIGGER_ON_TEST_FAILED](#) or [DEM_TRIGGER_ON_FDC_THRESHOLD](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)) and
3. no [event memory entry](#) is existing,

the Dem module shall try to allocate an [event memory entry](#) in its configured [event memory](#) (refer to [DemMemoryDestinationRef](#)).] ([RS_Diag_04105](#))

For details see figure [7.27](#).

[SWS_Dem_00785] [If an event

1. gets confirmed ([UDS status bit 3](#) changes from 0 to 1) and
2. the configuration parameter [DemEventMemoryEntryStorageTrigger](#) is set to [DEM_TRIGGER_ON_CONFIRMED](#) or [DEM_TRIGGER_ON_TEST_FAILED](#) or [DEM_TRIGGER_ON_FDC_THRESHOLD](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)) and
3. no [event memory entry](#) is existing,

the Dem module shall try to allocate an [event memory entry](#) in its configured [event memory](#) (refer to [DemMemoryDestinationRef](#)).] ([RS_Diag_04105](#))

For details see figure [7.27](#).

[SWS_Dem_00923] [If an event

1. is confirmed ([UDS status bit 3](#) is set to 1) and gets re-qualified as failed ([UDS status bit 0](#) changes from 0 to 1) and
2. the configuration parameter [DemEventMemoryEntryStorageTrigger](#) is set to [DEM_TRIGGER_ON_CONFIRMED](#) or [DEM_TRIGGER_ON_TEST_FAILED](#) or

`DEM_TRIGGER_ON_FDC_THRESHOLD` (refer to `DemPrimaryMemory` or `DemUserDefinedMemory`) and

3. no `event memory entry` is existing,
4. if `DemResetConfirmedBitOnOverflow` is set to false,

the `Dem` module shall try to allocate an `event memory entry` in its configured `event memory` (refer to `DemMemoryDestinationRef`).] (*RS_Diag_04105*)

For details see figure 7.27.

[SWS_Dem_00786] [If an event

1. uses Dem-internal debouncing (either counterbased or timebased) and
2. the Dem-internal debounce counter is incremented and reaches `DemCounter-BasedFdcThresholdStorageValue` or `DemTimeBasedFdcThreshold-StorageValue` and
3. the configuration parameter `DemEventMemoryEntryStorageTrigger` is set to `DEM_TRIGGER_ON_FDC_THRESHOLD` (refer to `DemPrimaryMemory` or `DemUserDefinedMemory`) and
4. no `event memory` exists,

the `Dem` module shall try to allocate an `event memory entry` in its configured `event memory` (refer to `DemMemoryDestinationRef`).] (*RS_Diag_04105*)

For details see figure 7.27.

Note: In case the `event memory entry` already exists, there might be other triggers to update content of `event memory entry` (refer chapter 7.7.7 "Event related data").

[SWS_Dem_CONSTR_06155] Dependency on `DemTimeBasedFdcThreshold-StorageValue` [`DemTimeBasedFdcThresholdStorageValue` shall only be present if `DemFreezeFrameRecordTrigger` is set to `DEM_TRIGGER_ON_FDC_THRESHOLD` or `DemExtendedDataRecordTrigger` is set to `DEM_TRIGGER_ON_FDC_THRESHOLD` or `DemEventMemoryEntryStorageTrigger` is set to `DEM_TRIGGER_ON_FDC_THRESHOLD` (refer to `DemPrimaryMemory` or `DemUserDefinedMemory`).] ()

7.7.2.2 Clearing event memory entries

The `event memory entries` of the `Dem` module can be cleared DTC-based via various diagnostic services (e.g. service 0x14 `ClearDiagnosticInformation` or service \$04 `Clear/Reset emission-related diagnostic information`). Therefore, the `Dem` offers separate APIs for different users:

- `Dem_ClearDTC`

- `Dem_J1939DcmClearDTC` (for J1939 to the J1939Dcm [7], refer to chapter 7.10.2).

[SWS_Dem_01203] [If the `Dem` module is requested to clear diagnostic information and the selected `DTC` is set to DTC group ‘all DTCs’ and the selected `DTCOrigin` is set to `DEM_DTC_ORIGIN_PRIMARY_MEMORY` or `DEM_DTC_ORIGIN_USERDEFINED_MEMORY_<NAME>`, the `Dem` shall reset all event and DTC status bytes and clear event related data assigned to the requested `DTCOrigin`.] (*RS_Diag_04150, RS_Diag_04214*)

[SWS_Dem_01205] [If the `Dem` module is requested to clear diagnostic information and the selected `DTC` is set to DTC group ‘all DTCs’ and the selected `DTCOrigin` is set to `DEM_DTC_ORIGIN_MIRROR_MEMORY`, the `Dem` shall clear only the event entries assigned to the mirror event memory. It does not affect UDS status.] (*RS_Diag_04213*)

[SWS_Dem_01206] [The `Dem` shall call the callback `DemClearEventAllowed` only if the selected `DTCOrigin` for the clear operation is the primary or user defined event memory.] (*RS_Diag_04150, RS_Diag_04213*)

The clearing process can be started by different clients. Whenever one of these interfaces starts the clearing process, the Dem-internal clearing mechanism is locked until the clear request is finished and the result is returned to the requesting user.

[SWS_Dem_01240] [If `DemClearDtcNotificationTime` is configured to `START`, the `Dem` shall inform the application about the start of a clear DTC operation. If the `DemClearDtcNotificationFnc` is configured, the `Dem` shall call this configured function otherwise the `Dem` shall call the R-Port `ClearDtcNotification`.] (*RS_Diag_04185*)

[SWS_Dem_01241] [If `DemClearDtcNotificationTime` is configured to `FINISH`, the `Dem` shall inform the application about the end of a clear DTC operation. The `Dem` shall consider the configuration parameter `DemClearDTCBehavior` which defines the clearing process of diagnostic information including clearing completion. If the `DemClearDtcNotificationFnc` is configured, the `Dem` shall call this configured function otherwise the `Dem` shall call the R-Port `ClearDtcNotification`.] (*RS_Diag_04185*)

[SWS_Dem_00661] [In case of multiple clients are requesting `Dem_ClearDTC` in parallel, the `Dem` shall internally process the different requests.] (*RS_Diag_04194*)

[SWS_Dem_00664] [If the clear DTC process is started by one client and still ongoing, then in case another client calls `Dem_ClearDTC`, the `Dem` shall return `DEM_PENDING`] ()

[SWS_Dem_00670] [If the configuration parameter `DemClearDTCLimitation` is set to `DEM_ONLY_CLEAR_ALL_DTCs`, the APIs `Dem_ClearDTC` are called with a selected DTC group different to `DEM_DTC_GROUP_ALL_DTCs` the `Dem` shall return `DEM_WRONG_DTC`.] (*RS_Diag_04117*)

[SWS_Dem_00570] [If the `Dem` module is requested to clear diagnostic information and the configuration parameter `DemClearDTCBehavior` is set to `DEM_CLRRESP_VOLATILE`, the `Dem` module shall return `E_OK` after the volatile memory is cleared.]
(RS_Diag_04194)

[SWS_Dem_00571] [If the `Dem` module is requested to clear diagnostic information and the configuration parameter `DemClearDTCBehavior` is set to `DEM_CLRRESP_NONVOLATILE_TRIGGER`, the `Dem` module shall return `E_OK` after the volatile memory is cleared and clearing of the non-volatile memory is triggered.]
(RS_Diag_04194)

[SWS_Dem_00572] [If the `Dem` module is requested to clear diagnostic information and the configuration parameter `DemClearDTCBehavior` is set to `DEM_CLRRESP_NONVOLATILE_FINISH`, the `Dem` module shall return `E_OK` after the volatile memory and the non-volatile memory is cleared.]
(RS_Diag_04194)

Note: The `Dem` implementation is responsible for consistency of the persistant data. (See SWS_NvM_00698: Contents of RAM buffer passed to `NvM_WriteBlock` may not change while the NvM processes the job). How to ensure data consistency (`UDS status byte`, freeze frame data and all other related information) is implementation specific (depends on the implemented NvM strategy). Options include, but are not restricted to, additional RAM mirrors and queuing of changes until the RAM area can be modified again.

Note: If the `Dcm` module receives the return type `DEM_CLEAR_OK` of the API `Dem_ClearDTC`, the `Dcm` module sends the positive response (refer to [9]).

[SWS_Dem_01057] [If the `Dem` module is requested to clear diagnostic information and the configuration parameter `DemClearDTCBehavior` is set to `DEM_CLRRESP_NONVOLATILE_FINISH`, the `Dem` module shall return `DEM_CLEAR_MEMORY_ERROR` if the clearing of the non-volatile memory fails.]()

[SWS_Dem_01202] Defintion of a failed clear DTC operation [If the `Dem` module is requested to clear diagnostic information, the `Dem` shall return `DEM_CLEAR_FAILED`:

- in case of clearing a single `DTC` at least one `DemClearEventAllowed` callback assigned to the event of the `DTC` returns FALSE.
- in case of clearing a `DTC group` or all `DTCs`, the individual `DTCs` shall be cleared like described in clearing single `DTC`. The resulting return value shall be `DEM_CLEAR_FAILED` if the clearing of all individual `DTCs` returned `DEM_CLEAR_FAILED`.

]
(RS_Diag_04150, RS_Diag_04214)

[SWS_Dem_00573] [If `DemTriggerMonitorInitBeforeClearOk` is set to TRUE, the `Dem_ClearDTC` shall not return `E_OK` until the events intialization is triggered (callback function `InitMonitorForEvent` is called). If `DemTriggerMonitorInitBeforeClearOk` is set to FALSE, `DEM_CLEAR_OK` is not considering Event initialization (`InitMonitorForEvent`).]
(RS_Diag_04194)

This functionality is intended for some special events, which must never be cleared from `event memory` within specific states, like for example special operation modes of the ECU (e.g. assembly-, transport-, or flash-mode) or Dcm sessions (which can be determined, using API `Dcm_GetSesCtrType`).

It is configurable per event (refer to `DemCallbackClearEventAllowed`), whether a SW-C / BSW module shall be requested about the event-deletion allowance from this callback function. One callback (representing a specific condition) can be assigned per event. If multiple conditions apply, they need to be summarized by one callback individually.

[SWS_Dem_00515] [The Dem module shall call the callback `DemClearEventAllowed` for each event it is configured for, before clearing this event.] (*RS_Diag_04194*)

[SWS_Dem_00667] [If the `DTC` is not configured to use event combination, the out-parameter `Allowed` of the callback `DemClearEventAllowed` returns “false” and the return value is equal to `E_OK`, the `Dem` shall not clear the respective `event memory entry` and `Dem-internal data values`.] (*RS_Diag_04194*)

[SWS_Dem_01295] [If the `DTC` is configured to use event combination, if only one `DemClearEventAllowed` callback has the out-parameter `Allowed` set to FALSE and returns `E_OK`, the `Dem` shall not clear the event status, respective `event memory entry` and `Dem-internal data values`.] (*RS_Diag_04194*)

[SWS_Dem_00668] [If the out-parameter ‘Allowed’ of the callback `DemClearEventAllowed` returns “false” and the configuration parameter `DemClearEventAllowedBehavior` is set to `DEM_NO_STATUS_BYTE_CHANGE`, the related UDS status byte shall not be modified.] (*RS_Diag_04194*)

[SWS_Dem_00669] [If the out-parameter `Allowed` of the callback `DemClearEventAllowed` returns “false” and the configuration parameter `DemClearEventAllowedBehavior` is set to `DEM_ONLY_THIS_CYCLE_AND_READINESS`, the related UDS status bits 1 (`TestFailedThisOperationCycle`), 4 (`TestNotCompletedSinceLastClear`), 5 (`TestFailedSinceLastClear`), and 6 (`TestNotCompletedThisOperationCycle`) shall be reset.] (*RS_Diag_04194*)

[SWS_Dem_01332] [In case an event is partially cleared according to [\[SWS_Dem_00669\]](#), the dependent functionality shall be handled as if the event is not cleared at all. This means the callback function `InitMonitorForEvent` will not be called and the FDC will remain unchanged in this situation.] (*RS_Diag_04194*)

[SWS_Dem_00516] [If the return value of the callback `DemClearEventAllowed` is equal to `E_NOT_OK`, the return value shall not be changed and event-deletion is allowed.] (*RS_Diag_04194*)

The `Dem` supports events that are not assigned to any `event memory`. This is the case, if the optional parameter `DemDTCRef` is not configured in `DemEventParameter`. Events are cleared, when the `event memory` assigned to them is cleared. In case there is no assigned `event memory`, these events would never be cleared. For

this case the `Dem` provides the configuration parameter `DemClearEventsWithout-DTCEventMemoryRef`.

[SWS_Dem_01249] [If the `event memory` referenced by `DemClearEventsWithout-outDTCEventMemoryRef` is cleared via any of the `Dem_ClearDTC` APIs, the `Dem` shall clear also all the events that are not assigned to any `event memory`.]()

Note: Event displacement (mainly controlled by the event priority) and `aging` are not influenced by this callback.

7.7.2.3 Event memory overflow indication

[SWS_Dem_00397] [The `Dem` module shall indicate for each `event memory` if the `event memory` is full and there was an attempt to store an additional event in this `event memory`.] (*RS_Diag_04093*)

This overflow indication can be used to trigger further internal behavior of the `Dem` module (e.g. displacement strategy). Furthermore, it can be used for additional fault analysis in workshops.

[SWS_Dem_00398] [The `Dem` module shall provide the API `Dem_GetEventMemoryOverflow` to provide access to the `event memory` overflow indication status of the respective `event memory`.] (*RS_Diag_04093*)

Note: This API can be used for vendor-specific Diagnostic Services or other vendor-specific handling, and is provided to SW-Cs, as well as complex device drivers.

[SWS_Dem_00651] [The `Dem` module shall provide the API `Dem_GetNumberOfEventMemoryEntries` to return the number of `event memory entries` currently stored in the `event memory`.] (*RS_Diag_04109*)

Note: For the reported number all events are considered independently of the fault confirmation.

[SWS_Dem_00399] [The `event memory` overflow indication of the respective `event memory` shall be reset, if all DTCs of this memory are deleted by `Dem_ClearDTC`.] (*RS_Diag_04093*)

Note: In case of `aging` and deleting single DTCs, the overflow indication of the `event memory` is not reset to keep this status information until the ECU receives an explicit clear command of this specific `event memory`. The ECU itself should not change this status information during normal operation (because it is used in workshops).

7.7.2.4 Event displacement

Event displacement means, that the most insignificant, already existing `event memory entry` is replaced by a new `event memory entry`, which needs to be stored. During displacement, the most insignificant entry gets lost.

[SWS_Dem_00400] [If the event retention want to allocate a new [event memory entry](#) and there is no free [event memory entry](#) available, the Dem module shall check according [\[SWS_Dem_00406\]](#) for allocated [event memory entries](#) to be displaced by the new [event memory entry](#).] ([RS_Diag_04118](#))

Note: If the [event memory](#) size is configured to cover all possible events, no displacement will occur.

[SWS_Dem_00401] [The Dem module provides the configuration parameter [DemEventDisplacementStrategy](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)) defining whether the existing [event memory entry](#) can be displaced or not.] ([RS_Diag_04118](#))

[SWS_Dem_00402] [If event displacement is disabled ([DemEventDisplacementStrategy](#) in [DemPrimaryMemory](#) or [DemUserDefinedMemory](#) selects [DEM_DISPLACEMENT_NONE](#)), the Dem module shall not displace existing [event memory entries](#) if the [event memory](#) is full.] ([RS_Diag_04118](#))

[SWS_Dem_00406] [If event displacement is enabled ([DemEventDisplacementStrategy](#) selects [DEM_DISPLACEMENT_FULL](#) in [DemPrimaryMemory](#) or [DemUserDefinedMemory](#) or [DEM_DISPLACEMENT_PRIO_OCC](#)), the Dem module shall perform the following sequence by combination of the different displacement criteria:

1. Priority (refer [\[SWS_Dem_00403\]](#))
2. Active/Passive status (configurable, only for [DEM_DISPLACEMENT_FULL](#) in [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)) (refer [\[SWS_Dem_00404\]](#))
3. Occurrence (refer [\[SWS_Dem_00405\]](#))

] ([RS_Diag_04118](#))

For details see figure [7.28](#).

Note: Priority needs to have Fuel system/Misfire over the rest (US/EU5) and Class A before B1,B2, C (Euro VI).

[SWS_Dem_00403] [If displacement strategy is [DEM_DISPLACEMENT_FULL](#) or [DEM_DISPLACEMENT_PRIO_OCC](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)), the Dem module shall displace lower prioritized events by higher prioritized events.] ([RS_Diag_04118](#))

[SWS_Dem_00404] [If displacement strategy is [DEM_DISPLACEMENT_FULL](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)), the Dem module shall displace passive events preferably.] ([RS_Diag_04118](#))

For details see chapter [7.7.1.4](#).

[SWS_Dem_00405] [If displacement strategy is [DEM_DISPLACEMENT_FULL](#) or [DEM_DISPLACEMENT_PRIO_OCC](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)), the Dem module shall displace older stored events in the

chronological order prior to newer stored events (refer [SWS_Dem_00412] and [SWS_Dem_00787]).] (RS_Diag_04118)

Figure 7.28: Combined displacement criteria processing

[SWS_Dem_00407] [If no `event memory entry` for displacement was identified, the Dem module shall discard the storage request.] (RS_Diag_04118)

[SWS_Dem_00692] [If an event is reported and an [event memory entry](#) with the same priority exists and the existing event is not tested in this [operation cycle](#) (TestNotCompletedThisOperationCycle bit == 1), the [Dem](#) shall displace the existing event with the reported event.] ([RS_Diag_04118](#), [RS_Diag_04071](#))

[SWS_Dem_00693] [If an event is reported and an [event memory entry](#) with the same priority exists and the existing event is tested in this [operation cycle](#) (TestNotCompletedThisOperationCycle bit == 0), the [Dem](#) shall discard the reported event.] ([RS_Diag_04178](#))

[SWS_Dem_00695] [If the configuration parameter [DemOBDEventDisplacement](#) is set to TRUE all emission related events with the following conditions shall not be considered during the displacement mechanism and shall not displaced from error memory:

Event old is emission related

AND

(Event old triggers MIL indicator

OR (Event old holds legislative Freeze Frame **AND** has equal or higher priority)

OR Pending-DTC==1)] ([RS_Diag_04195](#))

[SWS_Dem_00696] [If the configuration parameter [DemOBDEventDisplacement](#) is set to FALSE the Dem module shall process the displacement without the OBD-behavior.] ([RS_Diag_04195](#))

For details see figure [7.28](#).

[SWS_Dem_00408] [If the [event memory entry](#) for displacement was identified, the Dem module shall remove this [event memory entry](#) from the [event memory](#).] ([RS_Diag_04118](#))

Note: This removed [event memory entry](#) should now used for the pending storage trigger.

[SWS_Dem_00409] [If an [event memory entry](#) was removed during displacement, the [Dem](#) module shall reset the [UDS status bit 2](#) and [UDS status bit 3](#) to 0 if the configuration parameter [DemResetConfirmedBitOnOverflow](#) (refer to [DemGeneral](#)) is set to true.] ([RS_Diag_04067](#), [RS_Diag_04118](#))

[SWS_Dem_01186] [If an [event memory entry](#) was removed during displacement, the [UDS status bit 5](#) shall be reset to 0 in case of [DemStatusBitHandlingTestFailedSinceLastClear](#) is set to [DEM_STATUS_BIT_ALIGNMENT_AND_DISPLACEMENT](#) and [DemResetConfirmedBitOnOverflow](#) is set to true.] ([RS_Diag_04067](#), [RS_Diag_04118](#))

7.7.2.5 Reporting order of event memory entries

[SWS_Dem_00410] [The [Dem](#) module shall report [DTCs](#) in the chronological order of the event storage (refer to API [Dem_GetNextFilteredDTC](#)), if:

- the DTCStatus parameter has the “pending DTC” or “confirmed DTC” bit or both bits set
- all other bits of the `DTCStatus` parameter are set to false
- `DemResetConfirmedBitOnOverflow` is set to true

]([RS_Diag_04195](#))

Note: The chronological order is for reporting purposes only and does not imply explicit memory structure, which is implementation specific.

Note: The reporting order may vary with the customer specific attributes used by the algorithm for sorting the DTC records in case of not confirmed or pending. If the chronological order is required for further UDS status mask parameters, additional resources may be necessary.

[SWS_Dem_00787] [If an ‘stored event’ gets re-qualified as failed (`UDS status bit 0` changes from 0 to 1) and a respective `event memory entry` exists, the Dem module shall update the chronological order of the event storage by setting the particular event as most recent `event memory entry`.]([RS_Diag_04195](#))

[SWS_Dem_00411] [If the Dem module is requested to report in chronological order, the most recent `event memory entry` shall be reported at first.]([RS_Diag_04195](#))

[SWS_Dem_00412] [If a new event get stored in the `event memory`, the Dem shall update the chronological order by setting the new event as most recent `event memory entry`.]([RS_Diag_04195](#), [RS_Diag_04195](#))

Note: If there are multiple `event memory entries` stored at the same point in time the chronological reporting order of these elements is undefined. It depends on the implementation which of these entries is reported or displaced first..

7.7.3 Debouncing of diagnostic events

In general, an ECU may implement several types of debouncing improving signal quality. This section describes methods, how the Dem module shall implement basic algorithms used for fault maturation (diagnostic `event debouncing`).

If the Dem module is configured to implement the debounce algorithm for a specific event, one of the following debounce algorithms are to be performed Dem-internally. Otherwise, the respective monitor implemented in a SW-C or BSW will report the status of a certain event, after diagnostic `event debouncing` has been completed. For interaction between the Dem and SW-C or BSW please refer to the API `InitMonitorForEvent` (refer to chapter [7.2](#)).

If there are any requirements to get the passed or failed status within a certain amount of time, the diagnostic monitor is responsible.

[SWS_Dem_00413] [The Dem module shall support the event-specific configuration of debounce algorithms by using the configuration container DemDebounceAlgorithmClass.] ([RS_Diag_04068](#))

Note: That means for each individual event a specific algorithm can be specified.

7.7.3.1 Counter based debounce algorithm

[SWS_Dem_00526] [The Dem module shall provide a configuration parameter DemDebounceCounterBasedSupport (refer to DemGeneral) to enable or disable the Dem-internal counter based debouncing.] ([RS_Diag_04068](#))

[SWS_Dem_00414] [If the configuration container DemDebounceAlgorithmClass is set to DemDebounceCounterBased, the Dem module shall provide an internal debounce counter for each individual event, to qualify the reported event.] ([RS_Diag_04068](#))

For huge debounce ranges, the maximal range of the internal debounce counter is defined as sint16. This does not imply any explicit implementation.

Figure 7.29: Counter based debounce algorithm

[SWS_Dem_00415] [The Dem module shall calculate the fault detection counter (-128 ... +127 according to UDS) based on the value and range of the internal debounce counter to map the internal counter values linearly to the external values.] ()

[SWS_Dem_00416] [The Dem module shall provide the configuration parameter DemDebounceCounterFailedThreshold used to define the event-specific limit indicating the failed status (active).] ([RS_Diag_04068](#))

[SWS_Dem_00417] [The Dem module shall provide the configuration parameter DemDebounceCounterPassedThreshold used to define the event-specific limit indicating the passed status (passive).] ([RS_Diag_04068](#))

[SWS_Dem_00418] [The Dem module shall increment the internal debounce counter with its configured step-size (refer to DemDebounceCounterIncrementStepSize), when the monitor reports DEM_EVENT_STATUS_PREFAILED.] ([RS_Diag_04068](#))

[SWS_Dem_00419] [The Dem module shall decrement the internal debounce counter with its configured step-size (refer to `DemDebounceCounterDecrementStepSize`), when the monitor reports DEM_EVENT_STATUS_PREPASSED.] ([RS_Diag_04068](#))

[SWS_Dem_00420] [If the monitor reports DEM_EVENT_STATUS_FAILED, the Dem module shall set the internal debounce counter value to its configured threshold being the failed criteria.] ([RS_Diag_04068](#))

[SWS_Dem_00421] [If the monitor reports DEM_EVENT_STATUS_PASSED, the Dem module shall set the internal debounce counter value to its configured threshold being the passed criteria.] ([RS_Diag_04067](#), [RS_Diag_04068](#))

[SWS_Dem_00422] [The Dem module shall provide the configuration parameter `DemDebounceCounterJumpDown` for enabling the jump-down behavior.] ([RS_Diag_04068](#))

[SWS_Dem_00423] [If the jump-down behavior is enabled, the Dem module shall provide the configuration parameter `DemDebounceCounterJumpDownValue` defining the new internal debounce counter init value. Each reporting of a pre-passed value while the current debounce counter value is greater than the `DemDebounceCounterJumpDownValue` shall first reset the debounce counter to `DemDebounceCounterJumpDownValue` before performing the pre-passed debounce event ([[SWS_Dem_00419](#)]).] ([RS_Diag_04068](#))

Note: This will only happen if the counting direction changes from incrementing to decrementing.

[SWS_Dem_00424] [The Dem module shall provide the configuration parameter `DemDebounceCounterJumpUp` for enabling the jump-up behavior.] ([RS_Diag_04068](#))

[SWS_Dem_00425] [If the jump-up behavior is enabled, the Dem module shall provide the configuration parameter `DemDebounceCounterJumpUpValue` defining the new internal debounce counter init value. Each reporting of a pre-failed value while the current debounce counter value is smaller than the `DemDebounceCounterJumpUpValue` shall first reset the debounce counter to `DemDebounceCounterJumpUpValue` before performing the pre-failed debounce event ([[SWS_Dem_00418](#)]).] ([RS_Diag_04068](#))

Note: This will only happen if the counting direction changes from decrementing to incrementing.

Figure 7.30: Example of counter based debouncing (including jump behaviour)

Note: In figure 7.30, the value of Fault Detection Counter maps linearly to the internal [debounce counter](#) value.

The action `DEM_DEBOUNCE_STATUS_FREEZE` of the API `Dem_ResetEventDebounceStatus` is not relevant for counter-base debouncing. The action `DEM_DEBOUNCE_STATUS_RESET` of the `Dem_ResetEventDebounceStatus` is covered by [\[SWS_Dem_00684\]](#).

The `DemDebounceBehavior` `DEM_DEBOUNCE_STATUS_FREEZE` is covered in chapter 7.7.6. The `DemDebounceBehavior` `DEM_DEBOUNCE_RESET` is covered by [\[SWS_Dem_00654\]](#) and [\[SWS_Dem_00677\]](#). This is shown in figure 7.31.

Figure 7.31: Counter based debouncing behavior on enable conditions

[SWS_Dem_00674] [If the configuration parameter `DemDebounceCounterStorage` is set to True, the Dem module shall store the current value of the internal `debounce counter` non-volatile (refer to [SWS_Dem_00341]).] (RS_Diag_04124)

Note: [DemDebounceCounterStorage](#) is not supported for time based debouncing.

[SWS_Dem_00675] [If the configuration parameter [DemDebounceCounterStorage](#) is set to True, the Dem module shall re-store the current value of the internal [debounce counter](#) during each startup (latest in [Dem_Init](#)).] ([RS_Diag_04124](#))

Note: BSW events using non-volatile storage of the internal [debounce counter](#) cannot be reported before [Dem_Init](#), because the value needs first to be restored.

[SWS_Dem_00676] [If development error detection is enabled and [Dem_SetEventStatus](#) or [Dem_ResetEventDebounceStatus](#) is called before [Dem_Init](#) or after [Dem_Shutdown](#) for events which have [DemDebounceCounterStorage](#) set to True, the Dem module shall set the error code [DEM_E_WRONG_CONDITION](#).] ([RS_Diag_04124](#))

[SWS_Dem_CONSTR_06151] Dependency on DemCounterBasedFdcThreshold-StorageValue [The configuration parameter [DemCounterBasedFdcThreshold-StorageValue](#) shall only be present if [DemFreezeFrameRecordTrigger](#) is set to [DEM_TRIGGER_ON_FDC_THRESHOLD](#) or [DemExtendedDataRecordTrigger](#) is set to [DEM_TRIGGER_ON_FDC_THRESHOLD](#) or [DemEventMemoryEntryStorageTrigger](#) is set to [DEM_TRIGGER_ON_FDC_THRESHOLD](#).]()

[SWS_Dem_CONSTR_06152] Dependency on DemDebounceCounterJump-DownValue [[DemDebounceCounterJumpDownValue](#) shall only be present if [DemDebounceCounterJumpDown](#) is set to TRUE.]()

[SWS_Dem_CONSTR_06153] Dependency on DemDebounceCounterJumpUp-Value [[DemDebounceCounterJumpUpValue](#) shall only be present if [DemDebounceCounterJumpUp](#) is set to TRUE.]()

[SWS_Dem_CONSTR_06154] Dependency on DemDebounceCounterStorage [[DemDebounceCounterStorage](#) shall only be present if [DemOperationCycleStatusStorage](#) is set to TRUE.]()

7.7.3.2 Time based debounce algorithm

[SWS_Dem_00527] [The Dem module shall provide a configuration parameter [DemDebounceTimeBasedSupport](#) (refer to [DemGeneral](#)) to enable or disable the Dem-internal time based debouncing.] ([RS_Diag_04068](#))

[SWS_Dem_00426] [If the configuration container [DemDebounceAlgorithmClass](#) is set to [DemDebounceTimeBased](#), the Dem module shall provide an internal debounce timer for each individual event, to qualify the reported event.] ([RS_Diag_04068](#))

For long debounce periods, the maximal range of the internal debounce timer is defined as sint16. This does not imply any explicit implementation.

Figure 7.32: Time based debounce algorithm

[SWS_Dem_00427] [The Dem module shall calculate the fault detection counter (-128 ... +127 according to UDS) based on the value and range of the internal debounce timer, to map the internal timer values linearly to the external values.] ([RS_Diag_04068](#))

For details see figure [7.33](#).

[SWS_Dem_00428] [The Dem module shall start the internal debounce timer to qualify the reported event as failed when the monitor reports DEM_EVENT_STATUS_PREFAIRED.] ([RS_Diag_04068](#))

[SWS_Dem_00429] [If the internal debounce timer of a specific event was already triggered as pre-failed or the event is qualified as failed, and the monitor reports consecutively DEM_EVENT_STATUS_PREFAIRED again, the Dem module shall not restart the internal debounce timer.] ([RS_Diag_04068](#))

Note: The Dem module provides the configuration parameter `DemDebounceTimeFailedThreshold` used to define the event-specific delay indicating the failed status (active).

[SWS_Dem_00431] [If the monitor reports DEM_EVENT_STATUS_FAILED, the Dem module shall set the internal debounce timer value to its configured threshold being the failed criteria (refer to `DemDebounceTimeFailedThreshold`).] ([RS_Diag_04067](#), [RS_Diag_04068](#))

[SWS_Dem_00432] [The Dem module shall start the internal debounce timer to qualify the reported event as passed when the monitor reports DEM_EVENT_STATUS_PREPASSED.] ([RS_Diag_04068](#))

[SWS_Dem_00433] [If the internal debounce timer of a specific event was already triggered as pre-passed or the event is qualified as passed, and the monitor reports consecutively DEM_EVENT_STATUS_PREPASSED again, the Dem module shall not restart the internal debounce timer.] ([RS_Diag_04068](#))

[SWS_Dem_00434] [The Dem module shall provide the configuration parameter `DemDebounceTimePassedThreshold` used to define the event-specific delay indicating the passed status (not active).] ([RS_Diag_04068](#))

[SWS_Dem_00435] [If the monitor reports DEM_EVENT_STATUS_PASSED the Dem module shall set the internal debounce timer value to its configured threshold being the passed criteria (refer to [DemDebounceTimePassedThreshold](#)).] ([RS_Diag_04068](#))

Figure 7.33: Example of time based debouncing

[SWS_Dem_00685] [If the API [Dem_ResetEventDebounceStatus](#) is called with DEM_DEBOUNCE_STATUS_FREEZE, it shall freeze the related internal debounce timer.] ([RS_Diag_04068](#))

The action DEM_DEBOUNCE_STATUS_RESET of the API [Dem_ResetEventDebounceStatus](#) is covered by [\[SWS_Dem_00684\]](#).

[SWS_Dem_00655] [If the configuration parameter `DemDebounceBehavior` is set to `DEM_DEBOUNCE_STATUS_FREEZE`, the Dem module shall freeze the internal debounce timer when at least one enable condition for the related event is set to not fulfilled.] ([RS_Diag_04125](#))

[SWS_Dem_00678] [If the configuration parameter `DemDebounceBehavior` is set to `DEM_DEBOUNCE_STATUS_FREEZE`, the Dem module shall freeze the internal debounce timer when `ControlIDTCSetting` is set to disabled for the related event.] ([RS_Diag_04125](#))

[SWS_Dem_00656] [If an internal debounce timer is frozen and a new (valid) (debouncing-)result is reported for this event (as per [\[SWS_Dem_00428\]](#) / [\[SWS_Dem_00432\]](#)), the Dem module shall continue running the internal debounce timer (from current value).] ([RS_Diag_04125](#))

The `DemDebounceBehavior` `DEM_DEBOUNCE_RESET` is covered by [\[SWS_Dem_00654\]](#) and [\[SWS_Dem_00677\]](#).

Figure 7.34: Time based debouncing behavior on enable conditions

7.7.3.3 Monitor internal debounce algorithm

[SWS_Dem_00437] [If the configuration container `DemDebounceAlgorithmClass` is set to `DemDebounceMonitorInternal`, the Dem module shall not use a Dem-internal debounce mechanism for each individual event, to qualify the reported event.] ([RS_Diag_04068](#))

Note: The monitor is not allowed to report the event states `DEM_EVENT_STATUS_PREFAIRED` and `DEM_EVENT_STATUS_PREPASSED` for monitor internal debouncing.

Figure 7.35: Monitor internal debounce algorithm

7.7.3.4 Debounce algorithm initialization and reset conditions

[SWS_Dem_00438] [If Dem-internal debouncing is configured, the Dem module shall reset the Dem-internal debounce algorithm when `Dem_PreInit` has been called.] ([RS_Diag_04068](#))

[SWS_Dem_00343] [After receiving a command for clearing the `event memory`, the Dem-internal debounce algorithm shall be reset, presuming `event debouncing` is handled Dem-internally.] ([RS_Diag_04117](#), [RS_Diag_04068](#))

For details see chapter [7.7.2.2](#).

[SWS_Dem_00684] [If the API `Dem_ResetEventDebounceStatus` is called with `DEM_DEBOUNCE_STATUS_RESET`, it shall reset the related fault detection counter.] ([RS_Diag_04068](#))

Note: The internal `debounce counter` is reset to zero. The reset of an internal debounce timer will also stop this timer.

[SWS_Dem_00344] [If Dem-internal debouncing is configured, the Dem module shall reset the Dem-internal debounce algorithm upon starting a new operation cycle.] ([RS_Diag_04068](#))

For details see chapter [7.6](#).

Note: Resetting the debounce algorithm will also lead to a fault detection counter value of 0 (zero).

[SWS_Dem_00654] [If the configuration parameter `DemDebounceBehavior` is set to `DEM_DEBOUNCE_RESET` and the function `Dem_SetEnableCondition` sets one configured enable condition for the event to not fulfilled, it shall reset the related fault detection counter(s).] (*RS_Diag_04125*)

For details see chapter [7.7.6](#).

[SWS_Dem_00677] [If the configuration parameter `DemDebounceBehavior` is set to `DEM_DEBOUNCE_RESET`, the function `Dem_DisableDTCSetting` shall reset the related fault detection counter(s).] (*RS_Diag_04125*)

For details see chapter [7.11.2.6](#).

7.7.3.5 Fault detection counter retrieval

[SWS_Dem_00204] [The event-specific fault detection counter shall be accessible by using the API `Dem_GetFaultDetectionCounter`.] (*RS_Diag_04068*)

The fault detection counter can be:

1. located inside the Dem, if Dem-internal debouncing is configured (refer to chapter [7.7.3.1](#) and chapter [7.7.3.2](#)).
2. located inside the monitor, if debouncing is performed by the monitor (refer to [\[SWS_Dem_00264\]](#), [\[SWS_Dem_00439\]](#), [\[SWS_Dem_00513\]](#)).

[SWS_Dem_00264] [If debouncing is performed by a SW-C (not handled Dem internally), the Dem module shall retrieve the current value of the fault detection counter for the requested event by using the method defined in `DemCallbackGetFDC` container.] (*RS_Diag_04068*)

Note: The configuration container `DemCallbackGetFDC` (in `DemDebounceMonitorInternal`) is used to specify the related port or c-callback per event.

[SWS_Dem_00439] [If monitor internal debouncing is used and the container `DemCallbackGetFDC` is configured and the configured callback-function returns other than `E_OK`, this return value shall also be returned by the API `Dem_GetFaultDetectionCounter`.] (*RS_Diag_04068*)

Note: For resetting the fault detection counter implemented in a monitor, the Dem module uses the callback-function `InitMonitorForEvent` (refer to chapter [7.2](#)).

[SWS_Dem_00671] [If monitor internal debouncing is used and the container `DemCallbackGetFDC` is not configured for a given event, the API `Dem_GetFaultDetectionCounter` shall return `DEM_E_NO_FDC_AVAILABLE`.] ()

7.7.3.6 Fault detection counter reporting

The maximum value the DTC Fault Detection Counter has reached during current operation cycle.

[SWS_Dem_00788] [If the maximum FDC during current operation cycle is mapped to an extended data record ([DemInternalDataElement](#) set to DEM_MAX_FDC_DURING_CURRENT_CYCLE), it shall be available for all events referencing a UDS DTC.] ([RS_Diag_04125](#))

[SWS_Dem_00789] [If the UDS DTC of [[\[SWS_Dem_00788\]](#)] is referenced by multiple events or an [combined DTC](#), the event with the highest maximum FDC value shall be used to report.] ([RS_Diag_04125](#))

[SWS_Dem_00790] [The maximum FDC during current operation cycle shall be reset to zero with each restart operation cycle (refer to [DemOperationCycleRef](#)).] ([RS_Diag_04125](#))

[SWS_Dem_00791] [The maximum FDC during current operation cycle shall be update if the current fault detection counter value is greater than the current value of the maximum FDC during current operation cycle.] ([RS_Diag_04125](#))

The maximum value the DTC Fault Detection Counter has reached since the last time DTC information was cleared.

[SWS_Dem_00792] [If the maximum FDC since last clear is mapped to an extended data record ([DemInternalDataElement](#) set to DEM_MAX_FDC_SINCE_LAST_CLEAR), it shall be available for all events referencing a UDS DTC.] ([RS_Diag_04125](#))

[SWS_Dem_00793] [If the UDS DTC of [[\[SWS_Dem_00792\]](#)] is referenced by multiple events or an [combined DTC](#), the event with the highest maximum FDC value shall be used to report.] ([RS_Diag_04125](#))

[SWS_Dem_00794] [The maximum FDC since last clear shall be reset to zero with each clear DTC command affecting this particular event.] ([RS_Diag_04125](#))

[SWS_Dem_00795] [The maximum FDC since last clear shall be update if the current fault detection counter value is greater than the current value of the maximum FDC since last clear.] ([RS_Diag_04125](#))

7.7.4 Fault confirmation

After reporting, a fault and entering the pending status, the fault confirmation process begins within the Dem (refer to [Figure 7.26 General diagnostic event storage processing](#)).

This fault confirmation process results in the confirmed state. For that purpose, respective counter thresholds and counter types are specified.

[SWS_Dem_00528] [The Dem module shall provide the configuration parameter `DemEventConfirmationThreshold` per event defining the maximum number of tested and failed cycles, before the event becomes “confirmed”, i.e. enters the confirmed state.]()

[SWS_Dem_00529] [The configuration parameter `DemOperationCycleRef` (refer to `DemEventParameter`) shall be used for calculating the trip counter according ISO14229-1[2].] ([\(RS_Diag_04067\)](#))

For details see figure [7.19](#).

The healing confirmation process (described in chapter [7.7.8](#)) handles reported OK / passed results, which yields in the deactivation of a specific warning indicator. For that purpose, respective counter thresholds and counter types are specified.

Note: If the fault confirmation of an event is disabled, its `UDS status bit 3` is set during the qualification to failed (according to [\[SWS_Dem_00391\]](#)).

[SWS_Dem_01242] [The Dem shall support calls of `Dem_SetEventConfirmationThresholdCounter` after `Dem_PreInit`.] ([\(RS_Diag_04161\)](#))

[SWS_Dem_01243] [A call of the API `Dem_SetEventConfirmationThresholdCounter` shall set a new failure confirmation threshold.] ([\(RS_Diag_04161\)](#))

Note: A new failure confirmation threshold value will overwrite the default value given by `DemEventConfirmationThreshold`).

[SWS_Dem_01244] [If `Dem_SetEventConfirmationThresholdCounter` is called and the corresponding event is already stored in `event memory` and the new failure threshold is less or equal to the current failure counter, then the event will get confirmed. This implies, that the `event related data` will also be updated according their defined triggers.] ([\(RS_Diag_04161\)](#))

[SWS_Dem_01245] [If `Dem_SetEventConfirmationThresholdCounter` is called and the corresponding event is already stored in `event memory` and already confirmed, the `event memory entry` and confirmation status will remain, even if the new threshold is greater than the `failure counter`. Also after new error status reports, the confirmation status will remain.] ([\(RS_Diag_04161\)](#))

[SWS_Dem_01246] [A `DemIndicatorAttribute` with a configured `DemMILIndicatorRef`, shall use the `DemEventConfirmationThreshold` instead of the `DemIndicatorFailureCycleCounterThreshold` to calculate the indicator On Criteria (WarningIndicatorOnCriteriaFulfilled).] ([\(RS_Diag_04161\)](#))

7.7.4.1 Method for grouping of association of events for OBD purpose

[SWS_Dem_00965] [The Dem module shall provide a configuration parameter `DemOBDGroupingAssociativeEventsRef` for each event to reference a representative event to one group of associate events.]()

Note: One event is only allowed to be referenced to only one group of associate events. A referenced event must refer to it self.

[SWS_Dem_00967] [For each report of a Malfunction within in a group of events Dem shall proceed cycle counter towards MIL activation, either by processing a common cycle counter or by counting the respective counter of the reported event referencing to the event with the counter value “closest to MIL ON”.]()

[SWS_Dem_00968] [The healing / `aging` for each event shall to be performed individually.] ([RS_Diag_04178](#))

7.7.5 Event Combination

`Event combination` defines the ability of the Dem module to merge several events to one DTC. It is used to adapt different `monitor` results to one significant fault, which is clearly evaluable in a service station. The essential part of implementing a `combined DTC` is the calculation of its status information. The `combined DTC` status byte results from a bitwise logical operation of all associated events.

[SWS_Dem_00536] [The following `event combination` types are supported:

1. Combination on storage: configuration parameter `DemEventCombinationSupport` is set to `DEM_EVCOMB_ONSTORAGE`. The `combined DTC` is stored and updated in a single `event memory entry`.
2. Combination on retrieval: configuration parameter `DemEventCombinationSupport` is set to `DEM_EVCOMB_ONRETRIEVAL`. Each event is stored in a separate `event memory location`.
3. Disabled: configuration parameter `DemEventCombinationSupport` is set to `DEM_EVCOMB_DISABLED` and `event combination` is not used

]()

[SWS_Dem_00024] [In case `DemEventCombinationSupport` is set to `DEM_EVCOMB_ONRETRIEVAL` or `DEM_EVCOMB_ONSTORAGE`, the combination of multiple events to a DTC is defined by referencing from each event to the same DTC.]()

Note: For `OBD` it is also possible to assign multiple time the same DTC number via `DemObdDTCRef`. But as a difference to `UDS` and J1939 DTCs the OBD DTCs are reported multiple times to the `Dcm`.

Based on the configuration of the event related data the Dem module allows two different types of [event combination](#) (assign event related data to the combine event/DTC or to the sub-events).

Note: The primary use-case of [event combination](#) is to map more than one event (represented by an EventId) to only one DTC number. If combination “on storage” is used, the Dem module uses only one [event memory entry](#) and its related data for all events combined to the DTC. If combination on retrieval is used, each event is stored in a separate [event memory](#) location with its own set of event related data. The Dem module handles the [combined DTC](#) in consideration of its related [event memory entries](#).

Table 7.1 shows an example of a Dem configuration table including [combined DTCs](#). Several events are mapped to the same DTC. The combination on storage is represented by the DTC[1]. The DTC[2] shows an example of the combination on retrieval. The freeze frame data is stored individual for each event.

Unique EventId	Monitor status	UDS status	Assigned DTC	Freeze frame
Event[1]	S1	S1 S2 S3	DTC[1]	FF[28]	
Event[2]	S2	S1 S2 S3	DTC[1]	FF[28]	
Event[3]	S3	S1 S2 S3	DTC[1]	FF[28]	
Event[4]	S4	S4 S5 S6	DTC[2]	FF[74]	
Event[5]	S5	S4 S5 S6	DTC[2]	FF[77]	
Event[6]	S6	S4 S5 S6	DTC[2]	FF[75]	
Event[7]	S7	S7	DTC[3]	FF[89]	
Event[8]	S8	S8	DTC[4]	FF[67]	
....

Table 7.1: Example of a Dem configuration table including [combined DTCs](#)

[SWS_Dem_00441] [The Dem module shall implement the status bit calculations for the [UDS status byte](#) according to [Table 7.2.](#)]()

UDS status bit description		Combined UDS status information logical equation
0	TestFailed	$CbDTC_{Bit0} = Event[1]_{Bit0} \mid Event[2]_{Bit0} \mid \dots \mid Event[n]_{Bit0}$
1	TestFailedThis OperationCycle	$CbDTC_{Bit1} = Event[1]_{Bit1} \mid Event[2]_{Bit1} \mid \dots \mid Event[n]_{Bit1}$
2	PendingDTC	$CbDTC_{Bit2} = Event[1]_{Bit2} \mid Event[2]_{Bit2} \mid \dots \mid Event[n]_{Bit2}$
3	ConfirmedDTC	$CbDTC_{Bit3} = Event[1]_{Bit3} \mid Event[2]_{Bit3} \mid \dots \mid Event[n]_{Bit3}$
4	TestNotCompleted SinceLastClear	$CbDTC_{Bit4} = (Event[1]_{Bit4} \mid Event[2]_{Bit4} \mid \dots \mid Event[n]_{Bit4}) \& ! CbDTC_{Bit5}$
5	TestFailedSince LastClear	$CbDTC_{Bit5} = Event[1]_{Bit5} \mid Event[2]_{Bit5} \mid \dots \mid Event[n]_{Bit5}$
6	TestNotCompleted ThisOperationCycle	$CbDTC_{Bit6} = (Event[1]_{Bit6} \mid Event[2]_{Bit6} \mid \dots \mid Event[n]_{Bit6}) \& ! CbDTC_{Bit1} CbDTC$
7	WarningIndicator Requested	$CbDTC_{Bit7} = Event[1]_{Bit7} \mid Event[2]_{Bit7} \mid \dots \mid Event[n]_{Bit7}$

Table 7.2: Calculation of UDS status byte

In the table above the following logical operators are used:

- ! = logical negation (NOT)
- | = logical bitwise OR-operation
- & logical bitwise AND-operation

[SWS_Dem_00440] [If the Dem module is requested to clear a [combined DTC](#) (refer to [Dem_ClearDTC](#)), the Dem module shall clear all related events (refer to [\[SWS_Dem_01049\]](#) and [\[SWS_Dem_01050\]](#)).]()

[SWS_Dem_01049] [If the Dem module is requested to report the status of a [combined DTC](#) (refer e.g. [Dem_GetStatusOfDTC](#) or [Dem_GetNextFilteredDTC](#)), the calculation of the status byte shall be performed according [\[SWS_Dem_00441\]](#).]()

[SWS_Dem_01050] [Each time the status of an event is updated, the [combined DTC](#) status shall be calculated. If the [combined DTC](#) status has changed the relevant callbacks shall be invoked; refer to [\[SWS_Dem_00284\]](#), [\[SWS_Dem_00986\]](#), [\[SWS_Dem_00987\]](#) and [\[SWS_Dem_00828\]](#).]()

[SWS_Dem_00672] [The fault detection counter of the [combined DTC](#) shall be the maximum fault detection counter value of the sub-events.]()

Note: The combined fault detection counter value is required for [Dem_GetNextFilteredDTCAndFDC](#) (in UDS Service 0x19 14).

[SWS_Dem_CONSTR_6103] [In case the [event combination](#) is disabled, it is not allowed to reference from multiple events to the same dtc.]()

7.7.5.1 Combination On Storage

The following section describes the behavior of the Dem module in case the combination on storage is configured.

[SWS_Dem_00163] [If the Dem module is requested to support combination on storage, the [DTC](#) status bit transitions of the [combined DTC](#) (refer [\[SWS_Dem_00441\]](#)) shall be used as trigger source for the allocation of the [event memory entry](#), as well as the collection or update of its related data (freeze frames or extended data records).]()

[SWS_Dem_00442] [If a [combined DTC](#) (combination on storage) is aged, the Dem module shall remove this [event memory entry](#) and reset the status bytes of all sub-events according to [\[SWS_Dem_00823\]](#), [\[SWS_Dem_00824\]](#) and [\[SWS_Dem_00498\]](#).] ([RS_Diag_04133](#))

[SWS_Dem_00443] [If a [combined DTC](#) (combination on storage) is displaced, the Dem module shall remove this [event memory entry](#) and reset the status bytes of

all sub-events according to [SWS_Dem_00409] and [SWS_Dem_01186].] (RS_Diag_-04118)

7.7.5.2 Combination On Retrieval

The section below describes the behavior of combination on retrieval.

[SWS_Dem_00539] [If the Dem module is requested to support combination on retrieval , the status bit transition of each event shall trigger the collection, update and storage of the related data (freeze frame / extended data).] (RS_Diag_04067)

[SWS_Dem_00540] [If the Dem module is requested to report data of a combined DTC (combination on retrieval), the Dem module shall return the event related data of all assigned events.] ()

[SWS_Dem_00541] [Aging of each event of a combined DTC (combination on retrieval) shall be processed individually according to [SWS_Dem_00493] and [SWS_Dem_00498].] ()

[SWS_Dem_00542] [For combination on retrieval, the displacement algorithm for each event of a combined DTC shall be treated individually (refer to [SWS_Dem_00408]).] ()

7.7.6 Enable and storage conditions of diagnostic events

In certain cases, the event retention depends on parameters, which are available on operation system level. These parameters are combined to groups and define a certain number of checks (e.g. correct voltage range) before the event report is accepted or the event gets qualified. The checks are done by software components. The Dem module provides the ability to consider the reported result (a specific condition is fulfilled or not) during the event handling. There are two different types of conditions: enable conditions and storage conditions.

The strategy how to use the conditions (e.g. suppression of subsequent faults) and especially the assigning matrix of conditions to the events depends on the OEM.

The enable conditions are defined as a set of parameters, which are assigned to a specific condition. As long as this condition is not fulfilled, the event reports (refer to Dem_SetEventStatus) are not valid and therefore will not be accepted. It has no impact on Dem_ResetEventDebounceStatus, Dem_ResetEventStatus and Dem_ClearDTC. A similar functionality is used for the function inhibition. In contrast to the mutual exclusion matrix of the FiM, which is based on events, the enable conditions are based on system parameters (e.g. ignition status, local voltage).

The storage conditions are defined as a set of parameters, which are assigned to a specific condition. As long as this condition is not fulfilled, the Dem module does not store the event to the event memory.

The following requirements introduce the handling of the enable conditions.

Note: The [Dem](#) module supports enable conditions and provides the API [Dem_SetEnableCondition](#) to receive the current status (condition fulfilled or not) of a specific enable condition.

Note: The [Dem](#) module supports enable conditions that can be assigned to a specific event.

Note: The enable condition groups are introduced to improve the configuration methodology of the Dem module. If a significant number of events depend always on the same enable conditions, it is less effort to select one of the defined enable condition groups instead of assigning several enable conditions to each of those events.

[SWS_Dem_00447] [If the Dem module is requested to support enable conditions, the Dem module shall check the assigned enable conditions after the diagnostic monitor reports an event (passed/failed or pre-passed/pre-failed, refer to [Dem_SetEventStatus](#)).] ([RS_Diag_04192](#))

[SWS_Dem_00449] [If one enable condition is not fulfilled, all of [Dem_SetEventStatus](#) calls for those events being assigned to this condition shall be ignored (no change of `event status byte`) by the Dem.] ([RS_Diag_04192](#))

Note: In case of Dem-internal debouncing the related fault detection counter will be frozen or reset (refer to chapter Figure 29 and Figure 32).

[SWS_Dem_00450] [If all event-specific enable conditions are fulfilled, all status reports from SW-Cs and BSW modules via [Dem_SetEventStatus](#) for those events being assigned to these conditions shall be accepted by the Dem from this point in time on.] ([RS_Diag_04192](#))

Figure 7.36: Enable condition assignment configuration

The following requirements introduce the handling of the storage conditions.

Note: The [Dem](#) module supports storage conditions and provides the API [Dem_SetStorageCondition](#) to receive the current status (condition fulfilled or not) of a specific storage condition.

Note: The [Dem](#) module supports storage conditions that can be assigned to a specific event.

Note: The storage condition groups are introduced to improve the configuration methodology of the Dem module. If a significant number of events depend always on the same storage conditions, it is less effort to select one of the defined storage condition groups instead of assigning several storage conditions to each of those events.

[SWS_Dem_00455] [If storage conditions are used and assigned to an event, the [Dem](#) shall evaluate the assigned storage conditions after the event gets qualified as PASSED or FAILED and process [DemFreezeFrameRecordTrigger](#), [DemExtendedDataRecordTrigger](#) and [DemEventMemoryEntryStorageTrigger](#) only if the storage condition is fulfilled.] ([RS_Diag_04219](#))

Note: The [Dem](#) module supports storage conditions and checks the assigned storage conditions after the event reports [DEM_EVENT_STATUS_FDC_THRESHOLD_REACHED](#) (e.g. either via interface call or when reaching the configured threshold in debounce algorithm).

Note: If one storage condition is not fulfilled and no respective [event memory entry](#) exists, the [Dem](#) module will not enter the reported event into the [event memory](#).

Note: If one storage condition is not fulfilled and a respective [event memory entry](#) exists, the [Dem](#) module will not update the [event memory](#) of the reported event.

[SWS_Dem_01309] [If at least one storage condition assigned to an event is not fulfilled, the [Dem](#) shall skip the calculation of the bits:

- bit 2 (PendingDTC) and
- bit 3 (ConfirmedDTC).

in the corresponding [event status byte](#) and [UDS status byte](#).] ([RS_Diag_04219](#))

[SWS_Dem_00459] [If all event-specific storage conditions are fulfilled, the Dem module shall permit the storage of the reported event.] ([RS_Diag_04219](#))

Figure 7.37: Storage condition assignment configuration

For each storage condition a replacement event may be defined (see [DemStorageConditionReplacementEventRef](#)). This replacement event will be used as a replacement failure info.

[SWS_Dem_01086] [If an event is reported as FAILED and a storage condition referencing this event by [DemStorageConditionReplacementEventRef](#) exists and the storage condition is FALSE, the replacement event shall be set to FAILED.] ([RS-Diag_04137](#))

Note: As long as the storage condition is not fulfilled and no event assigned to the storage condition reports FAILED, the replacement event shall not be set.

Note: The replacement event has an EventStatus ([Dem_UdsStatusByteType](#)) as every other event.

Note: The status/behavior of the filtered event (filtered by the storage condition) is not affected by the replacement event. The failure which is filtered by the storage condition behaves identical in case of having a replacement event or in case of NOT having a replacement event configured for the storage condition.

[SWS_Dem_01089] [The replacement event shall be reset (status PASSED), when the storage condition is fulfilled (on enabling the storage condition).] ([RS_Diag_04137](#))

[SWS_Dem_CONSTR_06167] [the replacement event:

- shall not be mapped to a storage condition (DemStorageConditionGroupRef)
- shall not be configured to use debouncing (DemDebounceAlgorithmClass)
- shall not have an InitMForE callback/ clearEventAllowed (DemCallbackInitMForE/DemCallbackClearEventAllowed)
- shall not be configured for enableConditions (DemEnableConditionGroupRef)
- shall be configured as [DEM_EVENT_KIND_BSW](#)

] ([RS_Diag_04137](#))

7.7.7 Event related data

'Event related data' are additional data, e.g. sensor values or time stamp/mileage, which are stored in case of an event. ISO-14229-1[2] defines two different types of event related data: snapshot data (freeze frames) and extended data. The number or sets of stored event related data are strongly OEM / failure specific and are therefore configurable. This data is provided by SW-C or other BSW modules.

[SWS_Dem_00796] [Each [event memory entry](#) shall support the capability to store the configured 'Event related data' (freeze frame data (DTCSnapshot) or DTCExtendedData).] ()

For details see chapter [7.7.7.4](#).

Note: The presence of a Confirmed UDS status does not necessarily mean that 'event related data' is available as well.

The Dem module is not in charge of validity of event related data. Time consistency of event related data is depending on data source and storage time.

The Dem module provides a configuration table to combine event related data (freeze frames & extended data) with a specific DTC number, etc. (refer to chapter [7.7.7.4](#)).

Note: This does not define a specific implementation (e.g. look-up table, matrix, etc.). Furthermore it relates to the link between the configured data. An event is characterized by its event Id, DTC value, configured freeze frames and extended data records, etc.

7.7.7.1 Storage of freeze frame data

[SWS_Dem_00039] [The Dem module shall support event-specific freeze frame storage.]()

In general, there are two options for freeze frame configuration: (1) Non-emission related freeze frames are configured specific to one particular event. The freeze frame records can be addressed by using relative numbers (calculated or configured), so the record numbers are unique to an event (not globally). (2) Emission related freeze frames are configured globally for a particular ECU (OBD legislation requires one single freeze frame class only). The freeze frame record can be addressed per event by using the value 0x00.

[SWS_Dem_00040] [The Dem module shall support the storage of one or several DIDs per freeze frame record assigned by configuration (refer to [DemFreezeFrameClass](#)).]()

Note: A freeze frame is represented as a list of DIDs (refer to [DemDidClass](#)) or PIDs (refer to [DemPidClass](#)).

Note: Due to implementation reasons, the Dem usually needs to reserve memory for the maximum freeze frame size multiplied by the number of freeze frames.

[SWS_Dem_00337] [If [DemTypeOfFreezeFrameRecordNumeration](#) is set to [DEM_FF_RECNUM_CALCULATED](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)), the Dem shall store [DemMaxNumberFreezeFrameRecords](#) number of freeze frames for this DTC.]([RS_Diag_04127](#))

[SWS_Dem_CONSTR_06166] [If [DemTypeOfFreezeFrameRecordNumeration](#) is set to [DEM_FF_RECNUM_CALCULATED](#), parameter [DemFreezeFrameRecordTrigger](#) shall be set to [DEM_TRIGGER_ON_TEST_FAILED](#).] ([RS_Diag_04127](#))

[SWS_Dem_00581] [If the Dem module uses calculated record numbers, the Dem module shall numerate the event-specific freeze frame records consecutively starting by 1, based on their chronological order.] ([RS_Diag_04127](#))

[SWS_Dem_00582] [If [DemTypeOfFreezeFrameRecordNumeration](#) is set to [DEM_FF_RECNUM_CONFIGURED](#) (refer to [DemPrimaryMemory](#) or [DemUserDefinedMemory](#)), the Dem shall store per [event memory entry](#) all configured freeze frame records for this DTC.]()

[SWS_Dem_00797] [If the FreezeFrame uses dedicated, configured record numbers (refer to [DemFreezeFrameRecNumClassRef](#)) and an [event memory entry](#) exists, the Dem module shall capture the FreezeFrame on the configured trigger (refer to [DemFreezeFrameRecordTrigger](#)) and store it to the [event memory entry](#).] ([RS_Diag_04127](#))

In case, the storage trigger was not able to allocate an [event memory entry](#) (due to event retention) there might meanwhile the possibility (due to [aging](#)) to have suitable memory entries. Therefore the FreezeFrame trigger should try again to allocate an [event memory entry](#).

[SWS_Dem_00798] [If the FreezeFrame uses dedicated, configured record numbers (refer to DemFreezeFrameRecNumClassRef) and no event memory entry exists, the Dem module shall first try to allocate an event memory entry as described in [SWS_Dem_00783], [SWS_Dem_00784], [SWS_Dem_00785] and [SWS_Dem_00786]. Afterwards requirement [SWS_Dem_00797] applies.] (*RS_Diag_04127*)

[SWS_Dem_00799] [If the DemFreezeFrameRecordTrigger is set to DEM_TRIGGER_ON_FDC_THRESHOLD, the FreezeFrame shall be captured (as allowed by [SWS_Dem_00797]) each time the configured FDC threshold (refer to DemCounterBasedFdcThresholdStorageValue or DemTimeBasedFdcThresholdStorageValue) is reached (by a positive increment), but at most once per operation cycle.] (*RS_Diag_04127*)

[SWS_Dem_01068] [If the DemFreezeFrameRecordTrigger is set to DEM_TRIGGER_ON_FDC_THRESHOLD and the event reports DEM_EVENT_STATUS_FDC_THRESHOLD_REACHED (monitor-internal debounced event), the FreezeFrame shall be captured (refer [SWS_Dem_00797]), but at most once per operation cycle.] (*RS_Diag_04127*)

[SWS_Dem_00800] [If the DemFreezeFrameRecordTrigger is set to DEM_TRIGGER_ON_TEST_FAILED, the FreezeFrame shall be captured (as allowed by [SWS_Dem_00797]) each time the UDS status bit 0 is set (changing from 0 to 1).] (*RS_Diag_04127*)

[SWS_Dem_00801] [If the DemFreezeFrameRecordTrigger is set to DEM_TRIGGER_ON_PENDING, the FreezeFrame shall be captured (as allowed by [SWS_Dem_00797]) each time the UDS status bit 2 is set (changing from 0 to 1).] (*RS_Diag_04127*)

[SWS_Dem_00802] [If the DemFreezeFrameRecordTrigger is set to DEM_TRIGGER_ON_CONFIRMED, the FreezeFrame shall be captured (as allowed by [SWS_Dem_00797]) each time the Confirmed UDS status bit 3 is set (changing from 0 to 1).] (*RS_Diag_04127*)

[SWS_Dem_01351] [If the DemFreezeFrameRecordTrigger is set to DEM_TRIGGER_ON_TEST_FAILED_THIS_OPERATION_CYCLE, the FreezeFrame shall be captured each time the UDS status bit 1 (TFTOC) has a transition from 0 to 1.] (*RS_Diag_04127*)

[SWS_Dem_01308] Continous trigger conditions for freeze frames [If the DemFreezeFrameRecordTrigger is set to DEM_TRIGGER_ON_EVERY_TEST_FAILED, each time an event was reported as FAILED or after optional debouncing a qualified FAILED is detected the Dem shall capture the Freeze frame.] (*RS_Diag_04127*)

[SWS_Dem_00803] [If the FreezeFrame uses dedicated, configured record numbers (refer to DemFreezeFrameRecNumClass) and DemFreezeFrameRecordUpdate is set to DEM_UPDATE_RECORD_NO, the FreezeFrame shall be stored only if the FreezeFrame is currently not stored in this event memory entry.] (*RS_Diag_04127*)

[SWS_Dem_00804] [If the FreezeFrame uses dedicated, configured record numbers (refer to DemFreezeFrameRecNumClass) and DemFreezeFrameRecordUpdate is set to DEM_UPDATE_RECORD_YES, the FreezeFrame shall be updated with each trigger (refer to DemFreezeFrameRecordTrigger).] (*RS_Diag_04127*)

[SWS_Dem_00461] [If the configuration parameter DemEnvironmentDataCapture is set to DEM_CAPTURE_ASYNCHRONOUS_TO_REPORTING (refer to DemPrimaryMemory or DemUserDefinedMemory), event-specific freeze frame data shall be captured latest in the next cycle of the Dem_MainFunction.] (*RS_Diag_04127*)

[SWS_Dem_00805] [If the configuration parameter DemEnvironmentDataCapture is set to DEM_CAPTURE_SYNCHRONOUS_TO_REPORTING (refer to DemPrimaryMemory or DemUserDefinedMemory) and DemDebounceTimeBasedSupport is set to 'false', event-specific freeze frame data shall be captured within the reporting function (i.e. in the context of Dem_SetEventStatus).] (*RS_Diag_04127*)

Note: [SWS_Dem_00461] and [SWS_Dem_00805] does not apply if a pre-stored freeze frame is available, see also [SWS_Dem_00464].

[SWS_Dem_01081] [If the configuration parameter DemEnvironmentDataCapture is set to DEM_CAPTURE_ASYNCHRONOUS_TO_REPORTING (refer to DemPrimaryMemory or DemUserDefinedMemory), event-specific extended data shall be captured latest in the next cycle of the Dem_MainFunction.] (*RS_Diag_04127*)

[SWS_Dem_01082] [If the configuration parameter DemEnvironmentDataCapture is set to DEM_CAPTURE_SYNCHRONOUS_TO_REPORTING (refer to DemPrimaryMemory or DemUserDefinedMemory), event-specific extended data shall be captured within the context of Dem_SetEventStatus.] (*RS_Diag_04127*)

If DemEnvironmentDataCapture is equal to DEM_CAPTURE_SYNCHRONOUS_TO_REPORTING (refer to DemPrimaryMemory or DemUserDefinedMemory), a queue could be used to store the environment data until the data is transferred to the event memory. To not loose any reporting, the queue size needs to be configured to store all reporting between two cycles of Dem_MainFunction.

[SWS_Dem_01083] [If DemEnvironmentDataCapture is equal to DEM_CAPTURE_SYNCHRONOUS_TO_REPORTING, the Dem module shall queue the environmental data from the reporting (see [SWS_Dem_00805] and [SWS_Dem_01082]) till the next call of the Dem_MainFunction. The Dem shall at minimum queue the configured size (refer DemMaxNumberEventEntryEventBuffer). In case the queue is full, the environmental data shall be captured when the event is processed in Dem_MainFunction.] (*RS_Diag_04127*)

[SWS_Dem_CONSTR_06121] Dependency for DemMaxNumberEventEntryEvent-Buffer [The DemMaxNumberEventEntryEventBuffer shall only be present if DemEnvironmentDataCapture is set to DEM_CAPTURE_SYNCHRONOUS_TO_REPORTING (refer to DemPrimaryMemory or DemUserDefinedMemory).] ()

[SWS_Dem_CONSTR_06122] Dependency for DemOccurrenceCounterProcessing [The DemOccurrenceCounterProcessing (refer to DemPrimaryMemory or

`DemUserDefinedMemory`) shall only be present if `DemEnvironmentDataCapture` is set to `DEM_CAPTURE_SYNCHRONOUS_TO_REPORTING` (refer to `DemPrimaryMemory` or `DemUserDefinedMemory`).]()

[SWS_Dem_CONSTR_06123] Dependency for DemOperationCycleStatusStorage [The `DemOperationCycleStatusStorage` shall only be present if `DemOBDSupport` is set to `DEM_OBD_MASTER_ECU` or `DEM_OBD_PRIMARY_ECU`.]()

[SWS_Dem_CONSTR_06138] Dependency for DemOBDInputAmbientPressure [DemOBDInputAmbientPressure shall only be present if DemOBDSupport is set to DEM_OBD_MASTER_ECU or DEM_OBD_PRIMARY_ECU.]()

[SWS_Dem_CONSTR_06139] Dependency for DemOBDInputAmbientTemperature [DemOBDInputAmbientTemperature shall only be present if DemOBDSupport is set to DEM_OBD_MASTER_ECU or DEM_OBD_PRIMARY_ECU.]()

[SWS_Dem_CONSTR_06140] Dependency for DemOBDInputDistanceInformation [DemOBDInputDistanceInformation shall only be present if DemOBDSupport is set to DEM_OBD_MASTER_ECU or DEM_OBD_PRIMARY_ECU.]()

[SWS_Dem_CONSTR_06141] Dependency for DemOBDInputEngineSpeed [DemOBDInputEngineSpeed shall only be present if DemOBDSupport is set to DEM_OBD_MASTER_ECU or DEM_OBD_PRIMARY_ECU.]()

[SWS_Dem_CONSTR_06142] Dependency for DemOBDInputEngineTemperature [DemOBDInputEngineTemperature shall only be present if DemOBDSupport is set to DEM_OBD_MASTER_ECU or DEM_OBD_PRIMARY_ECU.]()

[SWS_Dem_CONSTR_06143] Dependency for DemOBDInputProgrammingEvent [DemOBDInputProgrammingEvent shall only be present if DemOBDSupport is set to DEM_OBD_MASTER_ECU or DEM_OBD_PRIMARY_ECU.]()

[SWS_Dem_CONSTR_06144] Dependency for DemOBDInputVehicleSpeed [DemOBDInputVehicleSpeed shall only be present if DemOBDSupport is set to DEM_OBD_MASTER_ECU or DEM_OBD_PRIMARY_ECU.]()

[SWS_Dem_CONSTR_06145] Dependency for DemConsiderPtoStatus [DemConsiderPtoStatus shall only be present if DemOBDSupport is set to DEM_OBD_MASTER_ECU or DEM_OBD_PRIMARY_ECU.]()

The snapshot record data is usually captured asynchronously from reporting the event status. In certain situations the captured data needs to be aligned with the reported event status. For this purpose the Dem_SetEventStatusWithMonitorData provides the possibility to add 2 monitor data. The monitorData0 can optionally be

passed to the `DataServices_Data ReadData` operation, so the application can align the data capture call to the initiated `Dem_SetEventStatus` function call.

[SWS_Dem_01330] Capturing event related data with monitor data [If the `ReadData` operation is configured to provide the `monitorData0`, the `Dem` shall add the `monitorData0` from the `Dem_SetEventStatusWithMonitorData` to the `ReadData` operation parameter `monitorData0`.]()

[SWS_Dem_01331] Handling of missing monitorData [If the data capturing was triggered from within an API call without `monitorData`, the `Dem` shall use a value of 0 as `monitorData`.]()

[SWS_Dem_00261] [The `Dem` module shall use the C-callback `DemRead` respectively the operation `ReadData` of the interface `DataServices_Data` to collect all configured data elements of the respective `freeze frame`.] (*RS_Diag_04127*)

[SWS_Dem_00463] [If the SW-C or `BSW` module cannot not provide the requested data (`ReadDataElement` returns other than `E_OK`), the `Dem` shall fill the missing data with the padding value `0xFF`, report the runtime error `DEM_E_NODATAAVAILABLE` to the `Det` and continue its normal operation.] (*RS_Diag_04085*)

[SWS_Dem_00585] [If the `Dem` module uses calculated record numbers, and if more than one freeze frame record is configured for a specific event, and this event is updated in the `event memory`, and all available freeze frame record slots for this event are occupied, the `Dem` module shall update the most recent record.]()

Note: The first freeze frame record slot will always represent the first occurrence.

7.7.7.2 Pre-storage of freeze frame data

The pre-storage of freeze frames can be used for events with highly volatile freeze frame data. With the first indication of the appearance of a specific event, even if the event is not yet de-bounced or qualified, the freeze frame data is captured (e.g. because of rapid changing of event related data during running failure monitoring phase). The pre-stored freeze frame functionality is used by monitors.

[SWS_Dem_00002] [The `Dem` module shall provide the configuration parameter `DemFFPrestorageSupported` (refer to `DemEventParameter`) to enable or disable pre-storage handling of freeze frames per event.] (*RS_Diag_04127*)

Note: If `DemMaxNumberPrestoredFF` is set to 0, `DemFFPrestorageSupported` can not be enabled for any DTC.

[SWS_Dem_00334] [If any event is configured to use pre-storage of freeze frames (refer to `DemFFPrestorageSupported`), the `Dem` module shall provide the API `Dem_PrestoreFreezeFrame` and `Dem_ClearPrestoredFreezeFrame`. Otherwise they are not provided.] (*RS_Diag_04127*)

[SWS_Dem_00189] [The Dem module shall provide the API [Dem_PrestoreFreezeFrame](#) to capture the pre-storage data of an event-specific freeze frame regardless of the UDS status bit changes.]()

Note: If a request to restore a [freeze frame](#) ([Dem_PrestoreFreezeFrame](#)) is interrupted by reporting an event status ([Dem_SetEventStatus](#)) or a call to [Dem_ClearPrestoredFreezeFrame](#) of the same EventId the detailed behavior is implementation specific. The [freeze frame](#) which is requested to be restored might be used immediately or might be stored and used with next upcoming event report or vice versa.

[SWS_Dem_00808] [The API [Dem_PrestoreFreezeFrame](#) shall return E_NOT_OK if no memory is available (see [DemMaxNumberPrestoredFF](#)).] ([RS_Diag_04127](#))

[SWS_Dem_00464] [If a pre-stored freeze frame is available, the Dem module shall use the data of the pre-stored freeze frame instead of the current data at the point in time when the event related data is captured (refer to [[SWS_Dem_00461](#)]).]()

[SWS_Dem_00969] [A pre-stored freeze frame shall be released after it has been stored in the event memory or discarded.]()

Note : A pre-stored freeze frame is considered to be stored if event retention is successful. A pre-stored freeze frame is discarded if the event retention failed.

[SWS_Dem_00191] [If no pre-stored freeze frame is available, the Dem module shall behave according to Storage of freeze frame data (refer to [[SWS_Dem_00039](#)]).]()

For details see chapter [7.7.7.1](#).

Note: The captured data while using pre-stored freeze frames can differ from the data, which is collected using the UDS status bit transitions as a trigger.

Note: To ensure absence of reaction to stored freeze frames of qualified events an additional freeze frame buffer should be used. Due to restrictions in hardware usage, the amount of possible entries can be restricted. Therefore, a replacement strategy could be required.

Figure 7.38: Example to use [Dem_PrestoreFreezeFrame](#) to restore freeze frame data

Some events detect a failure in one operation cycle of the control unit, but only determine the conditions to allow storage of the failure in the next operation cycle. The

freeze-frame of such events shows the values from the old operation cycle. For this purpose, the Dem supports non-volatile storage of pre-stored freeze-frame data. To avoid excessive storage, the storage can be enabled/disabled per event individually through the configuration `DemFFPrestorageInNvm`.

[SWS_Dem_01320] [If `DemFFPrestorageInNvm` is set to TRUE, the Dem shall store pre-stored freeze-frame data for this event on in Nvm.] (*Non volatile storage of pre-stored data*)

[SWS_Dem_01321] Point in time to store pre-stored data in non-volatile memory [If the Dem is configured to store pre-stored freezeframe data in non-volatile memory according to [SWS_Dem_01320], the Dem shall store the data once and latest during `Dem_Shutdown`.] ()

[SWS_Dem_01322] Point in time to retrieve pre-stored data from non-volatile memory [If the Dem is configured to store pre-stored freezeframe data in non-volatile memory according to [SWS_Dem_01320], the Dem shall restore the pre-stored data before `Dem_Init` has returned.] ()

[SWS_Dem_01323] Consistency of non-volatile stored pre-stored data [If the Dem is restoring pre-stored data according to [SWS_Dem_01322], the Dem shall only restore this data if it is consistent to the current configuration. If after reprogramming or calibration, the data layout has changed, the Dem shall skip the pre-stored data.] ()

[SWS_Dem_00050] [The Dem module shall provide the API `Dem_ClearPre-storedFreezeFrame` to release the pre-stored freeze frame for the specific event.] ()

[SWS_Dem_00465] [If an event gets qualified as passed (UDS status bit 0 changes from 1 to 0) the Dem module shall release the pre-stored freeze frame for the specific event.] ()

7.7.7.3 Storage of extended data

An extended data record contains additional information associated to a specific event that is not contained in a freeze frame (extended data, e.g. frequency counters, [Aging counters](#), etc.). According to the DID- or PID-based configuration of freeze frame data, extended data are divided in extended data records defined by its record numbers.

[SWS_Dem_00809] [If an `event memory entry` exists, the Dem module shall capture the ExtendedDataRecord on the configured trigger (refer to `DemExtended-DataRecordTrigger`) and store it to the `event memory entry`.] (*RS_Diag_-04127*)

In case, the storage trigger was not able to allocate an `event memory entry` (due to event retention) there might meanwhile the possibility (due to [aging](#)) to have suitable memory entries Therefore the ExtendedDataRecord trigger should try again to allocate an `event memory entry`.

[SWS_Dem_00810] [If no `event memory entry` exists, the Dem module shall first try to allocate an `event memory entry` as described in [\[SWS_Dem_00783\]](#), [\[SWS_Dem_00784\]](#), [\[SWS_Dem_00785\]](#) and [\[SWS_Dem_00786\]](#). Afterwards requirement [\[SWS_Dem_00809\]](#) applies.] ([RS_Diag_04127](#))

[SWS_Dem_00811] [If the `DemExtendedDataRecordTrigger` is set to `DEM_TRIGGER_ON_FDC_THRESHOLD`, the ExtendedDataRecord shall be captured (as allowed by [\[SWS_Dem_00810\]](#)) each time the configured FDC threshold (refer to `DemCounterBasedFdcThresholdStorageValue` or `DemTimeBasedFdcThresholdStorageValue`) is reached (by a positive increment), but at most once per operation cycle.] ([RS_Diag_04127](#))

[SWS_Dem_01069] [If the `DemExtendedDataRecordTrigger` is set to `DEM_TRIGGER_ON_FDC_THRESHOLD` and the event reports `DEM_EVENT_STATUS_FDC_THRESHOLD_REACHED` (monitor-internal debounced event), the ExtendedDataRecord shall be captured (refer [\[SWS_Dem_00810\]](#)), but at most once per operation cycle.] ([RS_Diag_04127](#))

[SWS_Dem_00812] [If the `DemExtendedDataRecordTrigger` is set to `DEM_TRIGGER_ON_TEST_FAILED`, the ExtendedDataRecord shall be captured (as allowed by [\[SWS_Dem_00810\]](#)) each time the `UDS status bit 0` is set (changing from 0 to 1).] ([RS_Diag_04127](#))

[SWS_Dem_00813] [If the `DemExtendedDataRecordTrigger` is set to `DEM_TRIGGER_ON_PENDING`, the ExtendedDataRecord shall be captured (as allowed by [\[SWS_Dem_00810\]](#)) each time the `UDS status bit 2` is set (changing from 0 to 1).] ([RS_Diag_04127](#))

[SWS_Dem_00814] [If the `DemExtendedDataRecordTrigger` is set to `DEM_TRIGGER_ON_CONFIRMED`, the ExtendedDataRecord shall be captured (as allowed by [\[SWS_Dem_00810\]](#)) each time the `UDS status bit 3` is set (changing from 0 to 1).] ([RS_Diag_04127](#))

[SWS_Dem_01070] [If the `DemExtendedDataRecordTrigger` is set to `DEM_TRIGGER_ON_PASSED`, the ExtendedDataRecord shall be captured with the change of Testfailed `UDS status bit 0` is reset (changing from 1 to 0). If no entry exists, on passed report no new entry shall be created.] ([RS_Diag_04127](#))

[SWS_Dem_01071] [If the `DemExtendedDataRecordTrigger` is set to `DEM_TRIGGER_ON_MIRROR`, the ExtendedDataRecord shall be captured with the transfer of the memory entry to the mirror memory.] ([RS_Diag_04127](#))

[SWS_Dem_CONSTR_6101] [`DemExtendedDataRecordTrigger` needs to be configured. `DemExtendedDataRecordTrigger` shall always be configured, except for internal data elements like occurrence counters.] ()

[SWS_Dem_00815] [If the configuration parameter `DemExtendedDataRecordUpdate` is set to `DEM_UPDATE_RECORD_NO`, the ExtendedDataRecord shall be stored only if the ExtendedDataRecord is currently not stored in this `event memory entry`.] ([RS_Diag_04127](#))

[SWS_Dem_00816] [If the configuration parameter [DemExtendedDataRecordUpdate](#) is set to [DEM_UPDATE_RECORD_YES](#), the ExtendedDataRecord shall be updated with each trigger (refer to [DemExtendedDataRecordTrigger](#)).] ([RS_Diag_04127](#))

[SWS_Dem_00282] [The [Dem](#) module shall use the C-callback [ReadDataElement](#) respectively the operation [ReadData](#) of the interface [DataServices_Data](#) to collect all configured data elements which are not typed as internal data elements (refer to [DemInternalDataElementClass](#)) of the respective [extended data record](#).] ()

[SWS_Dem_00468] [If an event is stored or updated in the [event memory](#), the Dem module shall store the collected extended data into the [event memory entry](#).] ([RS_Diag_04127](#))

[SWS_Dem_01391] Configuration of DTC priority as extended data record [If [DemInternalDataElement](#) is set to [DEM_DTC_PRIORITY](#), the Dem shall set the value of this internal data element to the DTC priority assigned by [DemDTCPriority](#) for this DTC. The length of this internal data element is one byte.] ([RS_Diag_04134](#))

7.7.7.4 Configuration of Event related data

This section describes the configuration of event related data and the access of event related data from the SW-Cs/BSW modules.

Note: The configuration model follows a flexible configuration process, but does not imply any explicit implementation.

The event related data of diagnostic events contain none or one set of extended data records (refer to [DemExtendedDataClass](#)), and none or one set of freeze frame records (refer to [DemFreezeFrameClass](#)) with its calculated or configured record numbers. Therefore a class-concept is used (refer to Figure 37).

An extended data record, a DID, or a PID can contain one ore more data elements (refer to [DemDataElementClass](#)).

Note: Asynchronous DIDs, as well as DIDs with a variable length are not supported by the Dem module, and shall therefore not be connected to the Dem.

Figure 7.39: Event related data configuration

A data element is provided from a SW-C or BSW module, or is computed Dem- internally.

For each external data element a respective require-port (refer to Service Interface DataServices <Data>) or C-callback (refer to [ReadDataElement](#)) is generated based

on the configuration [DemExternalCSDataElementClass](#) and [DemExternalSRDataElementClass](#). For each internal data element, the respective Dem-internal value is mapped.

Note: These data elements are typically specified in a Diagnostic Data Template.

Figure 7.40: Data element configuration

[SWS_Dem_CONSTR_06158] [Existence of size parameter `DemDataElementArraySize` [ECUC_Dem_00949] in container `DemExternalCSDDataElementClass` shall be present if `DemDataElementDataType` [ECUC_Dem_00950] in the same container is set to: `UINT8_N`, `SINT8_N`, `UINT16_N`, `SINT16_N`, `UINT32_N`, `SINT32_N`, `FLOAT_N`.]()

Note: `DemDataElementArraySize` [ECUC_Dem_00949] in container `DemExternalCSDDataElementClass` is not required for primitive datatypes.

[SWS_Dem_CONSTR_06159] [Restrictions on size parameter for 16 Bit arrays `DemDataElementArraySize` [ECUC_Dem_00949] shall be a multiple of 2 if the value is greater than 2 and `DemDataElementDataType` [ECUC_Dem_00950] is `UINT16_N` or `SINT16_N`.]()

[SWS_Dem_CONSTR_06160] [Restrictions on size parameter for 32 Bit arrays `DemDataElementArraySize` [ECUC_Dem_00949] shall be a multiple of 4 if the value is greater than 4 and `DemDataElementDataType` [ECUC_Dem_00950] is `UINT32_N`, `SINT32_N` or `FLOAT_N`.]()

[SWS_Dem_CONSTR_06161] [Existence of size parameter `DemDataElementArraySize` [ECUC_Dem_00967] in container `DemExternalSRDataElementClass` shall be present if `DemDataElementDataType` [ECUC_Dem_00840] in the same container is set to: `UINT8_N`, `SINT8_N`, `UINT16_N`, `SINT16_N`, `UINT32_N`, `SINT32_N`, `FLOAT_N`.]()

Note: `DemDataElementArraySize` [ECUC_Dem_00967] in container `DemExternalSRDataElementClass` is not required for primitive datatypes.

[SWS_Dem_CONSTR_06162] [Restrictions on size parameter for 16 Bit arrays `DemDataElementArraySize` [ECUC_Dem_00967] shall be a multiple of 2 if the value is greater than 2 and `DemDataElementDataType` [ECUC_Dem_00840] is `UINT16_N` or `SINT16_N`.]()

[SWS_Dem_CONSTR_06163] [Restrictions on size parameter for 32 Bit arrays `DemDataElementArraySize` [ECUC_Dem_00967] shall be a multiple of 4 if the value is greater than 4 and `DemDataElementDataType` [ECUC_Dem_00840] is `UINT32_N` or `SINT32_N`.]()

[SWS_Dem_00469] [The Dem module shall provide the ability to map Dem-internal data values (e.g. `aging counter`, occurrence counter) to specific data element (refer to `DemInternalDataElement` in `DemDataElementClass`) contained in an extended data records.] ([RS_Diag_04189](#), [RS_Diag_04190](#))

Note: If a Dem-internal data element is mapped to e.g. an extended data record (by configuration), this information can simply be requested by UDS Service ReadDTCInformation - Sub-Service reportDTCExtendedDataRecordByDTCNumber (0x19, 06).

[SWS_Dem_00817] [Internal data elements (refer to `DemInternalDataElementClass`) shall not be stored, but the current value shall be used instead.] ([RS_Diag_04127](#), [RS_Diag_04190](#))

Note: Further customer-specific Dem-internal data elements (according to [SWS_Dem_00470]) can have different semantics (e.g. Dem-internal data elements can freeze a value or provide a current value)

[SWS_Dem_CONSTR_06169] Usage of internal data elements only for extended data records [The `DemInternalDataElementClass` shall be only allowed for `DemDataElementClass` if it is only referenced by `DemDataElementClassRef` from `DemExtendedDataRecordClass`.]()

[SWS_Dem_00471] [If the configuration parameter `DemInternalDataElement` is set to `DEM_OCCCTR`, then the Dem-internal value of the occurrence counter shall be mapped to the respective data element.] (*RS_Diag_04127, RS_Diag_04190*)

For details see chapter [7.3.2](#).

[SWS_Dem_00472] [If the configuration parameter `DemInternalDataElement` is set to `DEM_AGINGCTR_UPCNT` or to `DEM_AGINGCTR_DOWNCNT`, then the Dem-internal value of the `aging counter` shall be mapped to the respective data element (based on [SWS_Dem_00643] or [SWS_Dem_00673]).] (*RS_Diag_04190*)

For details see chapter [7.6.1](#).

[SWS_Dem_00643] [If the data element `DEM_AGINGCTR_UPCNT` is configured, the `aging counter` mapping shall be based on a count-up mechanism from 0 to `DemAgingCycleCounterThreshold` (refer to ISO-14229-1[2], Annex D).] (*RS_Diag_04068, RS_Diag_04190*)

[SWS_Dem_00673] [If the data element `DEM_AGINGCTR_DOWNCNT` is configured, the `aging counter` mapping shall be based on a count-down mechanism from `DemAgingCycleCounterThreshold` to 0 (refer to ISO-14229-1[2], Annex D).] (*RS_Diag_04178, RS_Diag_04190*)

[SWS_Dem_01043] [If `DemAgingAllowed` is set to ‘false’ the internal data element `DEM_AGINGCTR_DOWNCNT` shall be `DemAgingCycleCounterThreshold` if configured or ‘255’.] (*RS_Diag_04190*)

[SWS_Dem_01044] [If Dem `DemAgingAllowed` is set to ‘false’ the internal data element `DEM_AGINGCTR_UPCNT` shall be ‘0’.] (*RS_Diag_04190*)

[SWS_Dem_01219] [If the configuration parameter `DemInternalDataElement` is set to `DEM_AGINGCTR_UPCNT_FIRST_ACTIVE`, the value shall be calculated analogous to `DEM_AGINGCTR_UPCNT`. The difference is, that in case the current aging counter has a value of 0 and the event status bits `TestFailedThisOperationCycle` and `TestNotCompletedThisOperationCycle` are set to False, a value of 1 is reported upon reading the Dem internal aging counter.] (*RS_Diag_04133*)

[SWS_Dem_00473] [If the configuration parameter `DemInternalDataElement` is set to `DEM_OVFLIND`, then the Dem-internal value of the overflow indication shall be mapped to the respective data element as boolean (0 = False, 1 = True).] (*RS_Diag_04190*)

For details see chapter [7.7.2.3](#).

[SWS_Dem_00592] [If the configuration parameter `DemInternalDataElement` is set to `DEM_SIGNIFICANCE`, then the (static) Dem-internal value of the DTC significance shall be mapped to the respective data element with 0 = OCCURRENCE and 1 = FAULT.] ([RS_Diag_04190](#))

For details see chapter [7.4.6](#).

[SWS_Dem_01084] [If the configuration parameter `DemInternalDataElement` is set to `DEM_CURRENT_FDC`, then the Dem-internal value of the current fault detection counter shall be mapped to the respective data element with the following value-translation:

[0..127]->[0x00..0x7F] and [-1..-128]->[0xFF..0x80].] ([RS_Diag_04190](#))

For details see chapter [7.7.3.3](#) and chapter [7.7.3.4](#).

[SWS_Dem_00818] [If the configuration parameter `DemInternalDataElement` is set to `DEM_MAX_FDC_SINCE_LAST_CLEAR`, then the Dem-internal value of the maximum Fault Detection Counter since last clear shall be mapped to the respective data element.] ([RS_Diag_04068](#), [RS_Diag_04190](#))

For details see chapter [7.7.3.6](#).

[SWS_Dem_00819] [If the configuration parameter `DemInternalDataElement` is set to `DEM_MAX_FDC_DURING_CURRENT_CYCLE`, then the Dem-internal value of the maximum Fault Detection Counter during current operation cycle shall be mapped to the respective data element.] ([RS_Diag_04127](#), [RS_Diag_04190](#))

For details see chapter [7.7.3.6](#).

[SWS_Dem_00820] [If the configuration parameter `DemInternalDataElement` is set to `DEM_CYCLES_SINCE_LAST_FAILED`, then the Dem-internal value of the operation cycle counter since last failed shall be mapped to the respective data element.] ([RS_Diag_04127](#), [RS_Diag_04190](#))

For details see chapter [7.6.1.1](#).

[SWS_Dem_00821] [If the configuration parameter `DemInternalDataElement` is set to `DEM_CYCLES_SINCE_FIRST_FAILED`, then the Dem-internal value of the operation cycle counter since first failed shall be mapped to the respective data element.] ([RS_Diag_04189](#), [RS_Diag_04190](#))

For details see chapter [7.6.1.2](#).

[SWS_Dem_00822] [If the configuration parameter `DemInternalDataElement` is set to `DEM_FAILED_CYCLES`, then the Dem-internal value of the failed operation cycle counter shall be mapped to the respective data element.] ([RS_Diag_04190](#))

For details see chapter [7.6.1.3](#).

The Dem module may be extended with further specific Dem-internal data elements, if a specific configuration requires particular data values, which are computed Dem-internally.

[SWS_Dem_01350] Mapping of static event associated identifier to internal data elements [If the `DemInternalDataElement` is set to `DEM_EVENT_ASSOCIATED_IDENTIFICATION`, the Dem shall use the static configured value in `DemEventAssociatedIdentification` as value for this internal data element.] (*RS_Diag_04190*)

[SWS_Dem_CONSTR_06168] Required DEM_EVENT_ASSOCIATED_IDENTIFICATION for events [If an DemEvent refers an DemDTC that itself requires snapshot record or extended data records that contain a `DemInternalDataElement = DEM_EVENT_ASSOCIATED_IDENTIFICATION`, the `DemEventAssociatedIdentification` shall be configured for that event.] ()

[SWS_Dem_00470] [If the Dem module implements customer-specific Dem-internal data elements, the configuration parameter `DemInternalDataElement` shall be extended with the respective enumeration values.] (*RS_Diag_04190*)

Note: The computation of any Dem-internal data value, which is not configured as data element, can be discarded (if it is not necessary for other internal behavior handling).

[SWS_Dem_01045] [If the configuration parameter `DemInternalDataElement` is set to `DEM_CURRENT_FDC`, then the fault detection counter shall be mapped to the respective data element.] (*RS_Diag_04190*)

For details see chapter 7.7.3.

[SWS_Dem_01334] Usage of monitorData0 in internal data [If `DemInternalDataElement` is set to `DEM_MONITOR_DATA_0`, the Dem shall use the 32 bit value of the provided `monitorData0` parameter value of the call `Dem_SetEventStatusWithMonitorData` as internal data value.] ()

[SWS_Dem_01314] Usage of monitorData1 in internal data [If `DemInternalDataElement` is set to `DEM_MONITOR_DATA_1`, the Dem shall use the 32 bit value of the provided `monitorData1` parameter value of the call `Dem_SetEventStatusWithMonitorData` as internal data value.] ()

[SWS_Dem_00918] [The Dem shall treat the non-integer data type `uint8[n]` either like an integer data type of the matching size or leave the contents uninterpreted in case the `DemDataElementEndianness` is configured to OPAQUE.] (*SRS_Com_02041*)

[SWS_Dem_00919] [The Dem shall interpret opaque data as `uint8[n]` and shall always map it to an n-bytes sized signal.] (*SRS_Com_02041*)

Note: For opaque data endianness, conversion has to be configured to OPAQUE.

[SWS_Dem_00920] [The Dem shall extend the endianness conversion defined in [16] Chapter 2.4 to signed data types.] (*SRS_Com_02041*)

Note: In [16] Chapter 2.4 defines the endianness conversion for unsigned data types.

[SWS_Dem_01216] [To serialize the required signed- and unsigned integer AUTOSAR data types into the FreezeFrame/ExtendedRecord the target endianness configured

in `DemDataElementEndianness` shall be considered. If `DemDataElementEndianness` is not present, the `DemDataElementDefaultEndianness` shall be used instead.] (*RS_Diag_04189*)

7.7.7.5 Notification of data changes

The Dem module shall notify other SW-Cs / BSW modules about updates of the event related data in the `event memory` (refer to chapter 8.4.3.8).

An update of the event related data occurs every time, a new `event memory entry` is done or an existing is updated.

Note: The `Dem` does not evaluate the return value (e.g. if other than `E_OK`) of this callback function.

Note: The configuration container `DemCallbackEventDataChanged` (in `DemEvent-Parameter`) is used to specify the related port or c-callback per event.

[SWS_Dem_00475] [If 'event related data' (extended data or freeze frame data) of an `event memory entry` is added or updated AND notifications on data changes are configured via `DemCallbackEventDataChanged`, the `Dem` shall trigger these configured event-specific notifications as well as the general notification `GeneralCallbackEventDataChanged`.] (*RS_Diag_04155*)

Note: In case of:

- deletion
- `displacement` (refer to chapter 7.7.2.4)
- `aging` (refer to chapter 7.7.8)

the Dem doesn't trigger the datachanged-callbacks.

[SWS_Dem_01062] [The functions `Dem_GetEventExtendedDataRecordEx` and `Dem_GetEventFreezeFrameDataEx` shall consider only primary and user defined memory.] ()

Note: The origin of the Event can be derived from the `EventId` (`DemMemoryDestinationRef`).

[SWS_Dem_00479] [The function `Dem_GetEventFreezeFrameDataEx` shall report the data of the DID (defined by parameter `DataId`) in the requested freeze frame record (defined by parameter `RecordNumber`, except `RecordNumber` equal `0xFF`) of the requested diagnostic event (`EventId`). If the `RecordNumber` is equal to `0xFF` and parameter `DemTypeOfFreezeFrameRecordNumeration` is set to `DEM_FF_RECNUM_CALCULATED` (refer to `DemPrimaryMemory` or `DemUserDefinedMemory`) the most recent record shall be used, otherwise `E_NOT_OK` shall be returned.] (*RS_Diag_04024*)

[SWS_Dem_01194] [The function `Dem_GetEventFreezeFrameDataEx` shall return the WWH-OBD freeze frame when called with `RecordNumber` `0x00`. If WWH-OBD is

not supported, the function shall return DEM_NO SUCH ELEMENT instead (refer to DemOBDSupport).] ([RS_Diag_04024](#))

[SWS_Dem_00991] [The format of the data in the destination buffer (DestBuffer) of the function `Dem_GetEventFreezeFrameDataEx` is raw hexadecimal values and contains no header-information like RecordNumber or DataId. The size of the buffer equals to the configuration settings of all respective data elements.] ([RS_Diag_04127](#))

[SWS_Dem_00477] [The function `Dem_GetEventExtendedDataRecordEx` shall report the data of the extended data record of the requested diagnostic event.] ([RS_Diag_04195](#))

[SWS_Dem_00989] [The format of the data in the destination buffer (DestBuffer) of the function `Dem_GetEventExtendedDataRecordEx` is raw hexadecimal values and contains no header-information like RecordNumber.] ()

Note: The Dcm uses the function `Dem_GetNextExtendedDataRecord` instead of the function `Dem_GetEventExtendedDataRecordEx`.

[SWS_Dem_00995] [If the interfaces `Dem_GetEventFreezeFrameDataEx` and `Dem_GetEventExtendedDataRecordEx` are called in the context of `GeneralCallbackEventChanged` or `CallbackEventChanged`, the data of the triggering event shall be retrievable (return value E_NOT_OK is not allowed).] ([RS_Diag_04189](#))

[SWS_Dem_00996] [`Dem_GetEventFreezeFrameDataEx` shall return E_NOT_OK in case the requested FreezeFrame data is currently not accessible (e.g. in case of asynchronous preempted data retrieval from application).] ()

[SWS_Dem_00997] [`Dem_GetEventExtendedDataRecordEx` shall return E_NOT_OK if the requested data is currently not accessible (e.g. in case of asynchronous preempted data retrieval from application).] ()

7.7.8 Aging of diagnostic events

The Dem module provides the ability to remove a specific event from the `event memory`, if its fault conditions are not fulfilled for a certain period of time (operation cycles). This process is called as "aging" or "unlearning".

Figure 7.41: General diagnostic event deletion processing

[SWS_Dem_00698] [The process of [aging](#) (counting of [aging counter](#)) starts when healing is completed (WarningIndicatorRequested bit == 0).] ([RS_Diag_04133](#), [RS_Diag_04178](#))

For details see figure [7.41](#).

[SWS_Dem_00019] [The Dem module shall support at least an [aging counter](#) for each [event memory entry](#).] ([RS_Diag_04133](#), [RS_Diag_04068](#), [RS_Diag_04178](#))

[SWS_Dem_00985] [The aging counter shall be calculated based on the referenced aging/operation cycle (refer to configuration parameter `DemAgingCycleRef`), if aging is enabled (refer to `DemAgingAllowed`) for this event.] (*RS_Diag_04133, RS_Diag_04068, RS_Diag_04178*)

[SWS_Dem_00492] [The Dem module shall be able to cover the current value of the aging counter of each individual event memory entry, to support an output.] (*RS_Diag_04133*)

Note: For extended fault analysis, it is possible to map the current value of the aging counter to a specific data element of an extended data record (refer to chapter 7.7.7.3 Storage of extended data).

[SWS_Dem_00493] [DemAgingCycleCounterThreshold or DemAgingCycleCounterThresholdForTSLC (depending on which value is higher) defines the number of completed aging cycles, after which the event memory entry shall be deleted(aged) from the event memory.] (*RS_Diag_04133*)

Note: For completed aging cycles definition see [[SWS_Dem_00489](#)]

[SWS_Dem_00823] [If configuration parameter `DemResetConfirmedBitOnOverflow` is set to false and in case an event has UDS status bit 3 set and gets qualified as passed and is not stored in an event memory entry the Dem module shall try to allocate an event memory entry to get an aging counter.] (*RS_Diag_04067*)

Note: If it is not possible to allocate an event memory entry, the aging delays until an event memory entry becomes available. (either by [[SWS_Dem_00823](#)] or by [[SWS_Dem_00824](#)]).

[SWS_Dem_00824] [If configuration parameter `DemResetConfirmedBitOnOverflow` is set to false and an event memory entry aging occurs the Dem module shall check for other events having UDS status bit 3 set to 1 and UDS status bit 0 set to 0. If such an event is found, the Dem shall allocate an event memory location to get an aging counter.] (*RS_Diag_04133*)

Note: The prioritization which event is chosen is implementation specific.

[SWS_Dem_00498] [Upon event aging counter reach threshold `DemAgingCycleCounterThreshold`, the UDS status bit 3 shall be set to 0.] (*RS_Diag_04133*)

Note: All other UDS status bits are not modified by aging of corresponding event memory entry.

[SWS_Dem_00161] [The Dem module shall handle the reoccurrence of unlearned events like new events, since they were previously deleted from the event memory by aging.] (*RS_Diag_04195*)

[SWS_Dem_00489] [The Dem module shall only allow processing (counting further) the value of the aging counter, if the related event is stored in the event memory and is qualified as passed.] (*RS_Diag_04133*)

Note: [Aging](#) is independent of the UDS status bit 3 and therefore independent of the fault confirmation (refer to chapter [7.7.4](#)).

[SWS_Dem_01054] [Upon event [aging counter](#) reach threshold [DemAgingCycleCounterThresholdForTFSLC](#), the UDS status bit 5 ([TestFailedSinceLastClear](#)) shall be set to 0 if [DemStatusBitHandlingTestFailedSinceLastClear](#) is set to [DEM_STATUS_BIT_AGING_AND_DISPLACEMENT](#).]

In case parameter [DemAgingCycleCounterThresholdForTFSLC](#) is not configured, [TestFailedSinceLastClear](#) will not be aged.] ([RS_Diag_04133](#))

[SWS_Dem_01075] [Upon event [aging](#), the [Dem](#) shall remove the event related Snapshot data ([Freeze frame](#)) and [extended data records](#) from the event memory.] ()

[SWS_Dem_01185] [In case there is no memory location available or occupied by an individual event, the UDS status bit [TestFailedSinceLastClear](#) of this event will not be aged.] ([RS_Diag_04133](#))

[SWS_Dem_00494] [The [Dem](#) module shall provide the configuration parameter [DemAgingCycleRef](#) (refer to [DemDTCAttributes](#)) defining the event-specific operation/aging cycle, whose status change triggers the processing (counting further) of the [aging counter](#) value.] ()

Note: Refer to chapter [7.6](#) for the handling of the operation cycle.

[SWS_Dem_00490] [If the configuration parameter [DemAgingRequiresTestedCycle](#) is set to False, the [Dem](#) module shall process (count further) the [aging counter](#) value, if the respective aging cycle ends/restarts.] ([RS_Diag_04133](#))

Note: The [aging counter](#) in [\[SWS_Dem_00490\]](#) is processed also if no new test result is available in the respective aging cycle.

[SWS_Dem_00826] [If the configuration parameter [DemAgingRequiresTestedCycle](#) is set to True, the [Dem](#) module shall process (count further) the aging cycle counter value, if the respective aging cycle ends/restarts and the UDS status bit 6 is set to zero.] ([RS_Diag_04178](#))

[SWS_Dem_01214] [If the configuration parameter [DemAgingRequiresNotFailedCycle](#) is set to true, the [aging counter](#) shall only be processed in an operation cycle without a test failed report.] ([RS_Diag_04133](#))

[SWS_Dem_01215] [If the configuration parameter [DemAgingRequiresNotFailedCycle](#) is set to false, the [aging counter](#) behavior shall not be influenced.] ([RS_Diag_04133](#))

7.7.9 Healing of diagnostic events

The [Dem](#) module provides the ability to activate and deactivate indicators per event stored in the [event memory](#). The process of deactivation is defined as [healing](#) of a diagnostic event (refer to [Figure 7.41](#)).

[SWS_Dem_01056] [The [Dem](#) shall process [healing](#) only on passed events using the current operation cycle [DemOperationCycleRef.](#).]()

7.7.9.1 Warning indicator handling

The detailed configuration of the warning indicator handling within the Dem is shown in [Figure 10.15](#).

Figure 7.42: Warning indicator configuration

The **Dem** module supports event specific counters to activate and deactivate indicators. These counters are calculated based on the configured failure and healing cycles (e.g. to turn on the MIL upon fault confirmation, and turn off the MIL after subsequent healing over three OBD-driving cycles).

Note: During the integration process of the Dem module, different indicators and behaviors (e.g. indicator lamps, text messages or icons) can be assigned to an event.

[SWS_Dem_00566] [If more than one indicator is configured for a specific event, the Dem module shall use a logical OR operation of all combined warning indicators assigned to this event to calculate the UDS status bit 7 (WarningIndicator).] (*RS_Diag_-04067*)

[SWS_Dem_00501] [The condition WarningIndicatorOnCriteriaFulfilled shall be fulfilled if at least one respective event indicator failure counter has reached its `DemIndicatorFailureCycleCounterThreshold` of tested and failed DemOperationCycles.]()

[SWS_Dem_00503] [If an indicator is configured (via `DemIndicatorAttribute`) the Dem module shall set at the end of an `operation cycle` the UDS status bit 7 (WarningIndicatorRequested)to 0, if the following conditions are fulfilled:

- at least one `DemIndicatorHealingCycleCounterThreshold` is unequal to 0
- all respective events indicator healing counters have reached their `DemIndicatorHealingCycleCounterThreshold` of tested and passed healing DemOperationCycles (equals WarningIndicatorOffCriteriaFulfilled)
- WIRbit is not enabled by calling the API `Dem_SetWIRStatus`

]()

[SWS_Dem_01233] [If an indicator is configured (via `DemIndicatorAttribute`) the Dem module shall set when the Event is reported/qualified to PASSED the UDS status bit 7 (WarningIndicatorRequested)to 0, if the following conditions are fulfilled:

- all `DemIndicatorHealingCycleCounterThreshold` are equal to 0
- WIRbit is not enabled by calling the API `Dem_SetWIRStatus`

]()

7.7.9.2 User controlled WarningIndicatorRequested-bit

In some cases (e.g. controlling a failsafe reaction in application) the WIR-bit of a corresponding event in Dem shall be set/reset by an especial “failsafe SW-C”.

The failsafe SW-C has to ensure a proper status of the WIR-bit (e.g. regarding to ISO-14229-1[2] or manufacture specific requirements). Therefore, the failsafe SW-C can use existing Dem mechanism to get the information about status changes of events in Dem (e.g. Callback EventUdsStatusChanged).

The failsafe SW-C shall report the required WIR-status to Dem (via `Dem_SetWIRStatus` and has to ensure that the current WIR-status of an event (in Dem) fits to the current failsafe-status in application:

- failsafe running: WIR-bit shall be set to "1"

- failsafe not running: WIR-bit shall be set to "0"

The failsafe SW-C has to report the status after every change of failsafe state.

Each invocation of `Dem_SetWIRStatus` updated the WIR-bit for the corresponding event (see parameter `EventId`)

Due to not storing the StatusOfDTC-bit 7 (WIR-bit) on ECU shutdown the failsafe SW-C has to ensure that the WIR-bit of an event fit to the current failsafe status after `Dem_Init`.

[SWS_Dem_00831] [Dem shall provide a function to control (set/reset) the WarningIndicatorRequested-bit of a configured event (in Dem) regarding to e.g. failsafe state.]()

[SWS_Dem_00832] [Setting of the WIR-bit of an event can be controlled via `Dem_SetWIRStatus` OR by the Dem internal WIR-bit handling. (OR-Operation).]()

Note: The parallel use of `Dem_SetWIRStatus` and the Dem internal WIR-Bit handling (at the same time) is needed for example for OBD systems, where the WIR-Bit needs to be activated according to the legislation (Dem-Internal) and a system reaction is controlled by the same event. Therefore the WIR-Bit needs to stay active until the system reaction is deactivated (`Dem_SetWIRStatus`).

[SWS_Dem_00833] [The WIR-bit of the corresponding event shall be set to "1" if `Dem_SetWIRStatus` is called with parameter `WIRStatus = TRUE`.]()

[SWS_Dem_00834] [The WIR-bit of the corresponding event shall be set to "0" if `Dem_SetWIRStatus` is called with `WIRStatus = FALSE` and no referenced Dem Indicator(s) are set.]()

[SWS_Dem_00836] [During disabled ControlDTCSettings the WIR-bit of an event shall not be changed via `Dem_SetWIRStatus` and the function shall return `E_NOT_OK`.]()

Note: In case the failsafe application is not able to set the WIR bit (`Dem_SetWIRStatus` returned `E_NOT_OK`), the failsafe application needs to observe the general status of the event and coordinate the retry of `Dem_SetWIRStatus` itself e.g. by using the callback function `InitMonitorForEvent` with parameter `DEM_INIT_MONITOR_REENABLED`.

[SWS_Dem_01303] Asynchronous behavior of Dem_SetWIRStatus [The Dem shall process a call of the `Dem_SetWIRStatus` asynchronously. This means that the final result is available at a later point in time.]()

A later point in time is meant to be implementation specific, it could be the next main function and after `Dem_SetWIRStatus` has returned.

7.7.9.3 Handling of the warning indicator lamp (MIL)

[SWS_Dem_00546] [For OBD-relevant ECUs, the Dem module shall provide the configuration parameter `DemMILIndicatorRef` to indicate that the configured indicator controls the MIL activation and deactivation.] ([RS_Diag_04110](#))

[SWS_Dem_00567] [If an indicator is configured for controlling the MIL of an OBD-relevant ECU, the Dem module shall use the configured event failure cycle counter of this event (refer to 0 Fault confirmation) to define the maximum number of tested and failed cycles, before the stored event activates the respective indicator.] ()

Note: For `OBD` systems, the activation of the Malfunction Indicator Lamp (`MIL`) is linked with the entry to confirmed state. Therefore the event specific fault confirmation counter (refer to the configuration parameter `DemEventConfirmationThreshold` and `DemOperationCycleRef`) has to be consistent with the indicator failure cycle counter.

Note: Leaving Pending state and the deactivation of the `MIL` is controlled by the configuration of the indicator healing cycle counter.

[SWS_Dem_00701] [If the MIL is deactivated and the event is confirmed the MIL shall be reactivated according to [\[SWS_Dem_00567\]](#) i.e. again according to the indicator failure cycle counter is reaching it's threshold.] ()

[SWS_Dem_00535] [In case of OBD-relevant events the indicator cycles shall be based on cycles defined by OBD legislation.] ()

[SWS_Dem_CONSTR_06165] Dependency for DemMILIndicatorRef [`DemMILIndicatorRef` shall only be present if `DemOBDSupport` is set to `DEM_OBD_MASTER_ECU` or `DEM_OBD_PRIMARY_ECU`.] ()

7.7.9.4 Notification and Set of the warning indicator status

[SWS_Dem_00046] [The `Dem` module shall provide the API `Dem_GetIndicatorStatus` that a software component can get information about the calculated indicator status.] ()

7.8 BSW Error Handling

Beside application software components also the basic software (BSW) can detect errors (e.g. hardware driver faults), especially during startup (ref. to document [\[11\]](#) for further details). For these errors (only a small number compared to application specific events), some additional aspects apply:

- Errors can be detected at startup before Dem is fully initialized
- Errors can be reported during startup, information needs to be buffered until Dem is fully available

- Errors can be reported between startup and shutdown, information needs to be buffered and need to be processed by the Dem main function (RTE related call tree requirement)
- Entries in the `event memory` can have a different configuration (e.g. no emphasis on freeze frame data for the workshop)

`Dem_SetEventStatus` is used by `BSW` modules to report errors from the point in time when the `Dem` module is pre-initialized. Within `Dem_Init`, the queued events are processed. During normal operation (after full initialization), the queuing mechanism of the API `Dem_SetEventStatus` is necessary to process the reported fault within the main function of the `Dem` module.

`Dem_SetEventStatus` can be used by `BSW` modules to report errors from the point in time when the `Dem` module is pre-initialized. Within `Dem_Init`, the queued events are processed.

[SWS_Dem_01212] [After `Dem_PreInit`, the `Dem` shall support debouncing by calling API `Dem_SetEventStatus` with `EventStatus` set to `DEM_EVENT_STATUS_PREPASSED` or `DEM_EVENT_STATUS_PREFAIRED`.] ([SRS_BSW_00339](#))

The `Fim` can be run in trigger or polling mode. For the initialization sequence this mode is not important, the `Dem` always initializes the `Fim`.

[SWS_Dem_01213] [The `Dem`-internal debouncing (counters and timers) shall be initialized by calling `Dem_PreInit`.] ([RS_Diag_04068](#))

[SWS_Dem_00167] [The `Dem` module shall provide a buffer mechanism to queue events which are reported before `Dem_Init` via `Dem_SetEventStatus` as qualified as Passed or Failed or reaching the qualification (debouncing). Reporting of `DEM_EVENT_STATUS_FDC_THRESHOLD_REACHED` shall not be queued.] ([SRS_BSW_00339](#))

[SWS_Dem_00207] [The size of the queue of the function `Dem_SetEventStatus` which is used while `Dem` is not initialized is configurable by the configuration parameter `DemBswErrorBufferSize`.] ([SRS_BSW_00339](#))

[SWS_Dem_01079] [The `Dem` shall determine the queue size depending on the number of events that can be reported before `Dem_Init`, i.e., those events with undefined `DemReportBehavior` or `DemReportBehavior = REPORT_BEFORE_INIT`. In case `DemBswErrorBufferSize` is configured, it overwrites the calculated size of the queue.] ([SRS_BSW_00339](#))

Figure 7.43: Dem_SetEventStatus buffering behavior

[SWS_Dem_01289] [All events which are reported via `Dem_SetEventStatus` after `Dem_PreInit` and before `Dem_Init` shall not trigger any monitor status change callback.] ([SRS_BSW_00339](#))

7.9 OBD-specific functionality

7.9.1 General overview and restrictions

In the following, a specification of the OBD handling in AUTOSAR is introduced. Herein, “OBD” is used for automotive OBD with respect to different target markets. For SW-sharing and distributed development reasons as well as aspects of packaging and responsibility of releases, the OBD-relevant information / data structures need to be reported via Standardized AUTOSAR interfaces.

In a vehicle there can be 3 different kinds of OBD ECUs:

- `Master ECU` (one per vehicle), in [WWH-OBD \[3\]](#) referenced as `VOBD`
- `Primary ECU` (several per vehicle)
- `Dependent / Secondary ECUs` (several per vehicle)

From the Basic Software point of view `Dependent / Secondary ECUs` doesn't need any specific OBD functionality. In `Dependent / Secondary ECUs` are always related to a Master or a Primary ECU. In `Dependent / Secondary ECUs` OBD-relevant information will not be stored in the Basic Software (e.g. OBD events will be forwarded to the respective Master or Primary ECU via the Bussystem). In `Dependent / Secondary ECUs` this "reported errors" and other OBD functionality might be handled by a SW component.

The following table will give an overview about which OBD functionality must be supported in a Master ECU, Primary ECU or [Dependent / Secondary ECU](#):

Functionality	Master ECU	Primary ECU	Dependent / Secondary ECU
OBD Event Memory	Own and “reported errors” of Dep. / Sec ECUs	Own and “reported errors” of Dep. / Sec ECUs	No
MIL Master	Yes	No	No
Readiness per vehicle (PID \$90)	Yes	No	No
Readiness per ECU (PID \$91)	Yes	Yes	No
Vehicle OBD counters (PID \$93)	Yes	No	No
Calculation and provision of General Information (DYC, General Nominator, PFC cycle,...)	Yes	No	No
Reception and execution of General Information (DYC, General Nominator, PFC cycle,...)	(Yes)	Yes	No
Continuous-MI counter	Yes	No	No
Cumulative Continuous-MI counter	Yes	No	No
Calibration Identification (CAL-ID)	Not in BSW	Not in BSW	Not in BSW
Calibration Verification Number (CVN)	Not in BSW	Not in BSW	Not in BSW

Table 7.3: Overview about OBD functionality in different OBD ECUs

The following OBD requierments are only valid for Master and Primary ECUs. If necessary the OBD requierments differenciate between Master and Primary Requierment. Master and Primary ECUs should have the same interface to the SWComponents. To build a sufficant and lean Master ECU there is no compulsion to use this interfaces.

Some details on the interaction between Dem and specific SW-C might remain open, since they are dependent on the Dem and SW-C implementation. The following functionality is not defined:

- Malfunction Indicator Lamp (MIL)-activation (interface Dem to MIL handler, MIL-bulb check, readiness blinking, blinking in case of catalyst damaging misfire, Continuous-MI, Short-MI, On-demand MI,...)
- Misfire fault handling (common debouncing, filtering single / multiple misfire faults).

However, this Dem SWS does not prescribe implementation details on how OBD compliance can be achieved within the Dem module, e.g. concerning state handling. Furthermore, the Dem SWS does not prescribe implementation details on the diagnostic algorithms of the SW-C necessary to achieve OBD compliance (how to detect a fault, when to trigger incrementation of IUMPR-numerator...).

In the following chapters, OBD relevant functionality and interfaces are described. It is important to note, that independent of standard Autosar mechanisms (e.g. communication via RTE), response codes and timing constraints need to fulfill OBD requirements (refer to [12] and [17]).

[SWS_Dem_01248] 「The configuration parameter `DemOBDEventMemorySetRef` shall be used to reference to the one and only `DemEventMemorySet` that contains `OBD` relevant information. All `OBD` operations of the `Dem` shall be only executed on this `DemEventMemorySet`.」()

[SWS_Dem_00584] 「While applying standard mechanisms (like `Std_ReturnType`), the Dem module shall only return values ensuring OBD compliant behavior with regard to permitted response codes and timing constraints.」()

Calculation and provision of General Information Data:

The Master ECU shall calculate and provide the following General Information Data via the Bussystem to the Primary ECUs:

- OBD Driving cycle information (DYC)
- General Nominator / Rate-based monitoring - driving cycle (RBM cycle)
- Warm up cycle (WUC)
- Ignition cycle
- Qualified OBD Driving cycle
- Permanent fault code - driving cycle (PFC cycle)

OBD Driving cycle information (DYC)

The Master ECU will provide the driving cycle information (DYC) via the Busystem. The driving cycle information (DYC) shall not be computed internally in the Primary ECUs.

General Nominator / Rate-based monitoring - driving cycle (RBM cycle)

Included in the IUMPR-Cycle Flag

Warm up cycle (WUC)

The warm up cycle (WUC) is a legally prescribed cycle and is computed by the Master ECU. The Master ECU will provide the warm-up cycle information (WUC) via the Busystem.

Ignition cycle

An ignition cycle describes the cycle between the “Terminal 15 on” status and “Terminal 15 off”, including the shut down/after-run phase of the electronic control unit if the engine start condition was met for at least 2 seconds after “Terminal 15 on”. The Master ECU will provide the Ignition cycle information via the Busystem.

Qualified OBD Driving cycle

The Qualified OBD Driving cycle is a legally prescribed cycle and has the following definition: For combustion engines (no hybrid): A driving cycle starts with “ignition on” and ends with the next time “ignition on” if the engine has reached the first engine start

conditions for at least 2 seconds (+/-a sec.) in between. Engine stops which are not caused by the driver or ECU don't end the driving cycle.

For hybrids and engines with shutoff strategies, the driving cycle is defined as the time between "ignition on" and the next time "ignition on" after the driving cycle is qualified.

If a driving cycle is qualified every "ignition off > ignition on - EVENT" results in the beginning of a new driving cycle. This new driving shall be qualified. A driving cycle is qualified when the engine speed has exceeded the minimum speed for engine start conditions for at least 2 seconds (+/-a sec.) or condition ready for driving for at least 2 seconds (+/-a sec.).

Permanent fault code - driving cycle (PFC cycle)

(refer to chapter [7.9.5.8](#))

Note: Calibration Identification (CAL-ID) and Calibration Verification Number (CVN)

The Calculation of the Calibration Identification (CAL-ID) and Calibration Verification Number (CVN) is not a BSW Task and will not be handled within the Dem.

7.9.2 PIDs provided by Dem

[SWS_Dem_00293] [For the following PIDs the data layout shall be compliant to SAE J1979DA [\[18\]](#).

- PID \$01 monitor status since DTCs cleared (4 byte)
- PID \$02¹ DTC that caused required freeze frame storage (2 byte)
- PID \$1C OBD requirements to which vehicle or engine is certified (1 byte)
- PID \$21 distance traveled while MIL is activated (2 byte)
- PID \$30 number of warm-ups (WUC) since DTCs cleared (1 byte)
- PID \$31 distance traveled since DTCs cleared (2 byte)
- PID \$41 monitor status this driving cycle (4 byte)
- PID \$4D engine run time while MIL is activated (2 byte)
- PID \$4E engine run time since DTCs cleared (2 byte)
- PID \$91 ECU OBD System Information (5 byte)

]()

Note: PID \$90 and \$93 are calculated in the application of the [VOBD](#). Primary ECUs only provides interfaces to retrieve the related data.

¹PID \$02 is only required for service \$02 and therefore no interface (like `Dem_DcmReadDataOfPID02`) is necessary. Instead the API `Dem_DcmGetDTCOfOBDFreezeFrame` is used (refer to [\[SWS_Dem_00623\]](#))

[SWS_Dem_CONSTR_06150] Dependency on container DemPidClass [The container [DemPidClass](#) and aggregated sub-container shall only be present if [DemOBD-Support](#) is set to [DEM_OBD_MASTER_ECU](#) or [DEM_OBD_PRIMARY_ECU](#).]()

[SWS_Dem_00351] [The Dem module shall compute and provide the number of confirmed faults (PID \$01, Byte A).]()

[SWS_Dem_01137] [For [WWH-OBD](#) PID\$01 shall not provide the number of confirmed faults.]()

[SWS_Dem_01138] [The Dem module shall compute and provide the ECU MIL status (PID \$01, Byte A).]()

[SWS_Dem_01139] [For [WWH-OBD](#) PID\$01 shall not provide the ECU MIL status.]()

[SWS_Dem_00748] [The function [Dem_DcmReadDataOfPID1C](#) shall return the appropriate value “OBD requirements to which vehicle or engine is certified.” according to the respective standards [\[12\]](#), e.g. OBD, OBDII, JOBD etc. The value PID1Cvalue to return is in configuration parameter [DemOBDCompliancy](#) defined.]()

7.9.2.1 Centralized PID \$21 / \$31 / \$4D / \$4E handling

[SWS_Dem_00703] [The Dem of the [Master ECU](#) shall calculate information for PID \$31 / \$4D / \$4E vehicle wide.]()

A [Primary ECU](#) is not allowed to calculate information for PID \$31 / \$4D / \$4E.

Note: Therefore a Software component of the [Master ECU](#) will use API [Dem_DcmReadDataOfPID<NN>](#) (where NN is 31 / 4D / 4E) to read out the information and will provide information about mileage / time for PID \$31 / \$4D / \$4E to the [Primary ECU](#) via the bussystem.

On receiving the information for PID \$31 / \$4D / \$4E in a software component in the Primary ECU via the bussystem, the software component will set the PID \$31 / \$4D / \$4E in calling the API [Dem_SetDataOfPID<NN>](#) (where NN is 31 / 4D / 4E) of the Dem of the [Primary ECU](#).

[SWS_Dem_00704] [Only the [Master ECU](#) is allowed to report information for PID \$31 / \$4D / \$4E to the scan tool.]()

[Primary ECUs](#) are not allowed report informations for PID \$31 / \$4D / \$4E to the scan tool.

On receiving the information for PID \$21 in a software component in the Primary ECU via the bussystem, the software component will set the PID \$21 in calling the API [Dem_SetDataOfPID21](#) of the Dem of the [Primary ECU](#).

[SWS_Dem_00346] [The Dem module shall use PID \$0D to calculate PID \$21 and PID \$31.]()

For details see chapter [7.11.7](#).

[SWS_Dem_00304] [A Dem delivery shall provide function call interfaces to the Dcm and the respective ServiceNeeds to declare to the Dcm that these PIDs are supported.] ()

[SWS_Dem_00347] [If PID \$1E (auxiliary input status) is supported the PTO (Power Take Off) related event status handling shall implemented inside the Dem module (refer to [19]).] ()

[SWS_Dem_00377] [The Dem module shall provide the interface [Dem_SetPtoStatus](#) allowing a SWC implementing the PTO functionality to notify the Dem module if PTO is active or inactive (refer to section 8).] ()

[SWS_Dem_00378] [The Dem module shall support the configuration parameter [DemConsiderPtoStatus](#) indicating that a certain event is affected by the Dem PTO handling.] ()

The Dem module provides the configuration switch [DemPTOSupport](#) to enable or disable the usage of PID \$1E.

A special configuration is applied for the computation of PID \$01 and \$41:

[SWS_Dem_00349] [The Dem module shall support the configuration parameter [DemEventOBDReadinessGroup](#) for OBD systems, to assign individual events to one specific readiness group.] ()

According to SAEJ1979 [17], the group AirCondition Component shall not be supported anymore. However, it is still included in ISO 15031-5 [12]. The groups distinguish between spark ignition engines (spark) and compression ignition engines (compr.). However, it is necessary to configure per event, to which readiness group the monitor contributes (if at all).

PID \$21 handling

PID \$21 is either reported only by the [OBD Master ECU](#), or a synchronized valued by all [OBD ECUs](#) (centralized [PID](#) handling).

If the configuration switch [DemOBDCentralizedPID21Handling](#) is enabled:

A Software component of the [OBD Master ECU](#) could retrieve the current [PID](#) \$21 value via the interface [GetDataOfPID21](#) from [Dem](#) module with the goal to distribute the value to all other [Primary ECUs](#) in the vehicle.

A Software component of the [OBD Primary ECU](#) receiving the information for [PID](#) \$21 could forward this information to the [Dem](#) module via the interface [SetDataOfPID21](#) to synchronize the value with the [OBD Master ECU](#).

[SWS_Dem_01095] [On invocation of [Dem_SetDataOfPID21](#) the internal [PID](#) \$21 value shall be updated.] ()

Note: AUTOSAR defines that [OBD Primary ECUs](#) do not calculate the [PID \\$21](#) value by its own.

[SWS_Dem_01096] [An [OBD Master ECU](#) shall calculate the [PID \\$21](#) value by its own (considering [\[SWS_Dem_00346\]](#)).]()

[SWS_Dem_01097] [On invocation of [Dem_GetDataOfPID21](#) the internal calculated [PID \\$21](#) value shall be returned.]()

Note: AUTOSAR defines that [OBD Primary ECUs](#) do not calculate the [PID \\$21](#) value by its own.

[SWS_Dem_01098] [On invocation of [Dem_DcmReadDataOfPID21](#) the [Dem](#) shall return the current value of [PID \\$21](#).]()

[SWS_Dem_01099] [If [Dem_DcmReadDataOfPID21](#) is called before [Dem_SetDataOfPID21](#), the Dem shall return 0xFFFF as [PID \\$21](#) value.]()

7.9.3 Readiness status

[SWS_Dem_00354] [The Dem module shall compute for PID \$01 the readiness status (if all events of a [DemEventOBDReadinessGroup](#) are reported as OK tested since last clear, or the event has caused MIL on). Suppressed Events shall be ignored for this computation.]()

For details see chapter [7.4.8](#).

Note: [DemEventOBDReadinessGroup](#) has a regulation background and special computations based on ModelYear (MY) and Market.

[SWS_Dem_CONSTR_06147] Dependency for DemEventOBDReadinessGroup [[DemEventOBDReadinessGroup](#) shall only be present if [DemOBDSupport](#) is set to [DEM_OBD_MASTER_ECU](#).]()

[SWS_Dem_00355] [The Dem module shall compute for PID \$41 the readiness group complete for current driving cycle (if all events of a group are tested in the current driving cycle). OBD Events Suppression shall be ignored for this computation.]()

For details see chapter [7.4.8](#).

Note: For calculation of the group readiness, the Dem module considers all events assigned to the specific readiness group.

[SWS_Dem_00356] [The Dem module shall compute the readiness group disabled (if the disabled status is reported by the monitor for any event of a group). OBD Events Suppression shall be ignored for this computation.]()

For details see chapter [7.4.8](#).

[SWS_Dem_00348] [The Dem module shall provide the disabling of events (refer to [Dem_SetEventDisabled](#)). OBD Events Suppression shall be ignored for this computation.]()

For details see chapter [7.4.8](#).

[SWS_Dem_00294] [In order to allow a monitor to report that the event cannot be computed in the driving cycle (aborted e.g. due to physical reasons), the Dem shall provide the API [Dem_SetEventDisabled](#).]()

Note: For the computation of PID \$41, the monitor has to report its event as disabled, if the test cannot be carried out anymore until the end of this driving cycle.

Note: SetEventDisabled does report an Event as “uncompletable” during the current driving cycle. It does not turn the Event into a Events Suppression according to chapter [7.4.8](#)

Figure 7.44: Dem calculates PID\$01 and PID\$41 data based on specific port operations

7.9.4 In-Use-Monitor Performance Ratio (IUMPR) Support

The In-Use-Monitor Performance Ratio (IUMPR) indicates how often the OBD system monitors particular components, compared to the amount of the vehicle operation. It is defined as the number of times a fault could have been found (=numerator), divided by the number of times the vehicle operation conditions have been fulfilled (=denominator) as defined in the respective OBD regulations.

The IUMPR will be calculated within the ECU using the following formula: In-Use-Monitor Performance Ratio = NUMERATOR / DENOMINATOR

[SWS_Dem_00709] [Ratios which refer to a Suppressed Event shall not be computed.]()

[SWS_Dem_00710] [The numerator shall be calculated in the ECU (Master and Primary).]()

[SWS_Dem_00711] [The [Dem](#) of the Master ECU shall calculate the [IUMPR](#)-Cycle Flag.]()

[SWS_Dem_00966] [The Dem shall provide an API [Dem_GetIUMPRDenCondition](#) to give a software component the possibility to get the General Denominator status information.]()

The Master ECU (software component) will provide the IUMPR-Cycle Flag (included in the General Denominator signal) via the bus system.

[SWS_Dem_00712] [In master and optionally primary [OBD ECUs](#), the [Dem](#) shall increment [ECU](#) global internal [general denominator](#) depending on the [denominator DEM_IUMPR_GENERAL_OBDCOND](#), if available. Depending on the system definition the global general denominator (and therefore the [DEM_IUMPR_GENERAL_OBDCOND](#)) may not be needed in some or even all [primary ECUs](#). In such cases the [DEM_IUMPR_GENERAL_OBDCOND](#) is never set, and the [general denominator](#) is stuck at 0 (and reporting of the InfoType \$08 / \$0B is disabled in the [Dcm](#)).]()

[SWS_Dem_01236] [The [Dem](#) shall increment monitor internal denominators depending on the [DEM_IUMPR_GENERAL_INDIVIDUAL_DENOMINATOR](#), and additional conditions if configured in [DemIUMPRDenGroup](#) a maximum of once per driving cycle, and shall consider monitor specific conditions only for the cycle the Release operation was called in.]()

[SWS_Dem_00714] [The Dem shall provide an API [Dem_SetIUMPRDenCondition](#) to get informed about the IUMPR-Cycle Flag status by a software component.]()

Note: A Timeout of the IUMPR-Cycle Flag / General Denominator signal of the Master will lead to an [event memory entry](#) in the COM Stack (timeout of signal) in the Primary ECU.

Further details concerning In-Use-Monitor Performance Ratio (IUMPR) can be found in regulation documentation.

Differencation InfoType \$08 / InfoType \$0B

The IUMPR-data collected need to be provided upon a service \$09 request. For gasoline engines, the Info Type \$08 is used and for diesel engines the Info Type \$0B is used (refer to [12] and [17]).

[SWS_Dem_00298] [In order to support the data requests in service \$09 as described above, the Dem shall provide the API [Dem_DcmGetInfoTypeValue08](#) or [Dem_DcmGetInfoTypeValue0B](#) to the [Dcm](#).]()

[SWS_Dem_00357] [If the [DemOBDEngineType](#) is set to [DEM IGNITION SPARK](#) the Dem module shall provide the API [Dem_DcmGetInfoTypeValue08](#) for InfoType \$08 IUMPR data.]()

Note: The service [Dem_DcmGetInfoTypeValue08](#) will be used by the Dcm, to request the IUMPR-data according to the InfoType \$08 data format used for the output to service \$09.

[SWS_Dem_00358] [If the [DemOBDEngineType](#) is set to [DEM IGNITION COMPRESSION](#) the Dem module shall provide the API [Dem_DcmGetInfoTypeValue0B](#) for Info Type \$0B IUMPR data.]()

Note: The API [Dem_DcmGetInfoTypeValue0B](#) will be used by the Dcm, to request the IUMPRdata according to the InfoType \$0B data format used for the output to service \$09.

The type of OBD system is defined by using the configuration switch [DemOBDSupport](#) (refer to [DemGeneral](#)).

In-Use-Monitor Performance Ratio (IUMPR) groups or components

The relevant In-Use-Monitor Performance Ratio (IUMPR) data recording is allocated in the Dem based on FIDs and events. The IUMPR data are recorded for different groups or components respectively.

Typically, one or more events serve for the monitoring of these components, e.g. the oxygen sensor. Hence, in order to record the in-use performance of the OBD-system, the test performance of all the relevant events for all the IUMPR-groups needs to be recorded. For that purpose, certain data structures need to be configured by the Dem.

However, in order to stop the incrementing of numerator and denominator in the case a monitor is stopped, due to the occurrence of another event preventing the monitor from running, it is necessary to list all events that can affect the computation of a particular IUMPRrelevant event. However, this information is already embodied in a FID (refer to FiM SWS) representing a function which serves for the computation e.g. of a particular even. A FID is inhibited in case of certain events and thus, this relation can also be used to stop the IUMPR record.

This leads to a combination of an event to be recorded and a primary FID (and optionally multiple secondary FIDs) representing all the events stopping the computation of the IUMPR-event. For the purpose of classifying the events into groups, an IUMPR-group is also part of this combination.

For the configuration of data structure per EventId / FID(s) / IUMPR-group combination, a new data object is introduced, namely, the Ratiod (refer to [DemRatioId](#)). Thus, the container DemRatio contains the EventId, primary FID, secondary FIDs, IUMPR-group and an interface option to configure “APluse” vs. “observer”, whereas the interface option is explained in more detail in the following.

Also for the purpose of the port configuration, an ObdRatioServiceNeeds is offered to the SW-C. If a SW-C is IUMPRrelevant, this ServiceNeed is filled out.

If the monitor is “symmetric”, i.e. upon completion of the test a fault could have been found, even if there is currently no fault in the system, then the numerator can be incremented just by observing the TESTED-status of the assigned event.

[SWS_Dem_00359] [Only for monitors being configured with the option “observer”, the Dem module shall increment the numerator of the corresponding monitor, if the assigned event gets tested/qualified (as passed or failed).]()

If the diagnostic is asymmetric and it takes more efforts to detect a malfunction than to detect an OK status, the monitor needs to call an API in order to report that a malfunction could have been found, because this may require some simulation within the monitor and can therefore not be purely derived from the TESTED status.

[SWS_Dem_00360] [For OBD relevant systems the Dem module shall provide the API [Dem_RepIUMPRFaultDetect](#).]()

[SWS_Dem_00296] [The Dem module shall provide the API [Dem_RepIUMPRFault-Detect](#) for the asymmetric monitor to report that a malfunction could have been found.]()

Note: This service shall be used by the monitor to report that a fault could have been found even if there is currently no fault at all according to the IUMPR regulations that all conditions are met for the detection of a malfunction.

[SWS_Dem_01188] [The [Dem](#) shall increment the ratio-individual IUMPR-numerator at maximum of one time per OBD driving cycle.]()

[SWS_Dem_00361] [The Dem module shall provide the configuration parameter [DemRatioKind](#), to indicate per Ratiod to indicate per Ratiod if the numerator is calculated based on the TESTED-status or the API call.]()

Additional denominator conditions:

For some particular monitors (e.g. for secondary air system, comprehensive components), there are additional conditions defined on the denominator: Their denominator will only be incremented if certain temperature or activity conditions are met. Then, the monitor needs unlock (Release) the denominator when the additional conditions are met in a driving cycle.

In case of a fault being detected that prevents further computations of these additional denominator conditions, the numerator is required to be frozen as well. For that reason it is necessary to assign particular denominator conditions if applicable. Upon the report of an inhibited computation of a particular denominator condition, the affected ratio are set to frozen,

For this handling of commonly used denominator conditions within the Dem, further interfaces and configuration items are introduced.

[SWS_Dem_00715] [The Dem module shall provide configuration parameter [DemI-UMPRDenGroup](#) to offer several conditions to be applied to the denominator per Ratiod.]()

[SWS_Dem_00362] [The Dem module shall provide the APIs for releasing (refer to [Dem_RepIUMPRDenRelease](#)) the denominator under special conditions if the [DemIUMPRDenGroup](#) is configured as [DEM_IUMPR_DEN_PHYS_API](#).]()

[SWS_Dem_00308] [The Dem shall provide the API [Dem_RepIUMPRDenRelease](#) to IUMPRrelevant SW-C, to control the denominator specific to the respective Ratiold.]()

Note: This service shall be used by the monitor to report, that a denominator of a specific monitor (represented by FID and EventId) is released for physical reasons.

In systems with multiple ECUs being OBD relevant and even IUMPR relevant, the status information on the additional denominator conditions needs to be communicated to synchronize the behavior of the counters. For that reason, an additional interface is introduced to read out and to report the status of the individual denominator conditions.

[SWS_Dem_00716] [The Dem shall provide the API [Dem_GetIUMPRDenCondition](#) to read out the status of a particular condition.]()

[SWS_Dem_00717] [The Dem shall provide the API [Dem_SetIUMPRDenCondition](#) to set the status of a particular condition (mainly in depending ECUs).]()

Note: To comuincate the received general denominator status, the Primary ECU should make use existing API as offered for SWCs.

Legislation requires that IUMPR tracking shall be stopped for a specific monitor, if it is inhibited by another service \$07 visible fault.

[SWS_Dem_01392] [The IUMPR ratio shall be blocked whenever any of the Events linked (via FunctionInhibitionConfiguration or through SummaryEvents) to one of the FIDs referenced by [DemFunctionIdRef](#) is in state PENDING, or any other event causal to this event (according to component dependency structure) is in state PENDING (see [DemComponentClassRef](#) referenced by [DemDiagnosticEventRef](#)).]()

[SWS_Dem_00299] [As long as an event has Pending status, the Dem module shall stop increasing the numerator and denominator.]()

Based on the related FID (FiM access) and Ratiold, the Dem module can determine which numerator and denominator has to be stopped.

Figure 7.45: Dem calculates IUMPR data based on specific interface operations

7.9.5 OBD for light duty (OBD2)

Together with the Dcm, this Dem SWS provides standardized AUTOSAR interfaces to support the OBD services \$01 - \$0A defined in SAE J1979 [17]. With these services, Autosar OBD functionality shall be capable of meeting all light duty OBD regulations worldwide (California OBDII, EOBD, Japan OBD, and all others.)

[SWS_Dem_CONSTR_06148] **Dependency on container DemRatio** [The container `DemRatio` shall only be available if `DemOBDSupport` is set to `DEM_OBD_MASTER_ECU`.]()

7.9.5.1 Service \$01 Read Current Powertrain Diagnostic Data

With Service \$01, the current value of any PID (except PID \$02) can be read. For each PID calculated by the Dem, a dedicated API function `Dem_DcmReadDataOfPID<NN>` as described in chapter 7.9.2 is provided.

7.9.5.2 Service \$02 Read Powertrain Freeze Frame Data

In order to retrieve relevant data a fault entry, the Dem needs access to current data, addressed via PIDs. For that purpose, a Client (=Dcm/Dem)/Server (=SW-C) interface is assigned based on configuration items.

[SWS_Dem_00291] [The Dem module shall support only the legislative freeze frame (record number 0). This will be a single list of PIDs assigned to this freeze frame (refer to [DemPidClass](#)).]()

This means a request by a generic scan tool for record number one and above will be ignored.

Upon the entry of a fault in the memory, the values of these PIDs/DIDs are requested through the RTE via a client server interface.

Figure 7.46: Dem and Dcm module requests PID data elements of SW-C via ReadData operation

[SWS_Dem_00596] [The Dem module shall provide access on PID data elements of the most important freeze frame being selected for the output of service \$02 (OBD freeze frame of the event which caused MIL on) to the Dcm module (refer to [Dem_DcmReadDataOfOBDFreezeFrame](#)).]()

Note: The Dem processes and stores only the raw data for service \$02. Any PID header-information and fill bytes are added by the Dcm. The Dcm configuration defines the individual PID layout, which also defines an order of the contained data elements. Each data element references to its linked element in the Dem configuration (refer to Figure 47).

The individual data elements of a PID are selected via an index by the Dcm.

[SWS_Dem_00597] [The index values (refer to API parameter `DataElementIndexOfPID`) of [Dem_DcmReadDataOfOBDFreezeFrame](#) shall be assigned zerobased and

consecutive. Their order shall be derived from the position of the data elements (refer to DcmDspPidDataPos, of the referencing DcmDspPidData containers) in the Dcm's PID layout.]()

Note: This index is not configured explicitly (to be able to avoid resource overhead for e.g. mapping tables in the implementation).

Figure 7.47: PID layout configuration within Dcm (master) and Dem

[SWS_Dem_00623] [The function `Dem_DcmGetDTCofOBDFreezeFrame` shall return the DTC associated with the most important freeze frame being selected for the output of service \$02 (PID \$02).]()

7.9.5.3 Service \$03 - Read Emission-Related Powertrain Diagnostic Trouble Codes

The diagnostic service provides the OBD DTCs where the `UDS status bit 3` is currently set. Therefore the interfaces described in chapter 8.3.4.1 will be used by Dcm.

7.9.5.4 Service \$04 - Clear Reset Emission-Related Diagnostic Information

[SWS_Dem_00718] [In Master, Primary and `Dependent / Secondary ECUs` executing service \$04 shall clear all emission-related diagnostic information in primary and user defined (event) memory (if configured) as defined in SAE J1979 [17].]()

[SWS_Dem_00719] [Executing service \$04 shall include non emissionrelated diagnostic information (e.g. Debouncing counter, Event/DTC related status information as

TestFailedSinceLastClear) of primary and all user defined [event memories](#) (if configured) in Master, Primary and [Dependent / Secondary ECUs.](#)]([\)](#)

7.9.5.5 Service \$06 - Support of central DTR handling

With Service \$06, an external test tool can request an emissionrelated ECU to return the supported OBDMIDs (“OBD Monitor Identifier”) and / or the standardized diagnostic test results associated with the OBDMID.

The OBD related standards (refer to ISO 15031-5 [12] and SAE J1979 [17]) reserve certain OBDMIDs for the special purpose of obtaining the list of supported OBDMIDs within the vehicle. These OBDMIDs are called “availability OBDMIDs” and are numbered with \$00, \$20, \$40, \$60, \$80, \$A0, \$C0 and \$E0.

In contrast to earlier Autosar releases, the [Dem](#) additionally provides interfaces to report latest test results handled per particular identifier ([DTR](#) “Diagnostic Test Result”) introduced for that purpose.

Within the Service \$06, the response (apart from the support information) consists of a data triple with test result, lower and upper limit representing the latest result of a conducted and qualified monitoring check. In order to refer to a particular component and a particular certified test, the response also contains the OBDMID and the TID (“Test Identifier”). For the external representation of the data, a socalled UnitandScalingID (UaSID) is passed along with the response onto the tester. From OBD regulation point of view it is required to have consistent data in Service\$06 and Service\$07. And in this scenario, a test has failed if the test result is either less than the lower limit or higher than the upper limit. Along with this violation of the thresholds, a corresponding Event has to be reported and vice versa. Note that this consistency is valid strictly only upon first detection of the malfunction, since a healing from Service\$07 takes one entire cycle without a failure detected while the Service\$06 contents simply represent the latest test result.

In order to support this consistency requirement, the Dem provides a specific interface to report the results per [DTR](#) whereas an Event is associated to a [DTR](#) on configuration level to refer to.

Note that the Event serves as master and within its status additional effects such as enable / storage conditions are encountered. Given a specific [DTR](#) update type (by configuration), the UDS status (Tested, Failed, debounce status etc.) decides whether a [DTR](#) result being reported is further processed or suppressed/ignored.

The Dem offers a service of conversion for the SWC to support a report of test results and thresholds within the ECU-internal resolution. The conversion onto the target format (standardized by [17, 19]: uint16, formula according to UaSID) including a correction in case of rounding effects is done within the Dem. For that reason the configuration includes a conversion formula similar to the one used by the RTE to describe physical data (but simpler) where only a linear mapping is supported. Note that the conversion does not respect the UaSID. The service Need for the [DTR](#) provides a

reference to a physical unit (see SWC Template chapter “Physical Units”) and a linear conversion (see SWC Template chapter “Computation Methods”) of CompuRational-Coeffs with a maximum of two numerator coefficients and one denominator coefficient, as well as the desired UaSID During the configuration process, this information is processed into a single linear conversion, which is then stored inside the ECUC of the Dem.

By this central data handling, the aspect of data consistency for Service\$07 / \$06 is supported as well as reset in case of fault clear.

[SWS_Dem_00751] [The Dem shall provide data structures and functionality to receive, store and report Service\$06 test results persistently.]()

[SWS_Dem_00752] [The `DemDtrId` is assigned by the `Dem` during the `BSW` configuration step.] ([RS_Diag_04129](#))

Note: The Dem refers to a BSW configuration `DemDtr` which associates

- a `DemDtrId` to an `EventId`
- an indication whether the Monitor will provide data for the minimum limit, maximum limit, or both
- OBDMID
- TID
- UaSID
- `DemDtrUpdateKind`
- Coefficients for linear conversion analogous to the SW-C Description (chapter 5.5.)

[SWS_Dem_00753] [For ensuring data consistency, an `EventId` can only be referenced by at maximum one `DTR`.]()

[SWS_Dem_00754] [The `Dem` shall use the `DemDtrUpdateKind` for the evaluation and processing of reported `DTR`-values:

- `DEM_DTR_UPDATE_ALWAYS`: State of the event is not considered (default, and used if `DemDtrEventRef` is not configured).
- `DEM_DTR_UPDATE_STEADY`: Only when the events pre-debouncing within `Dem` is “stuck” at the FAIL or PASS limit, and the latest result matches the debouncing direction.

]()

[SWS_Dem_00755] [The Dem shall only support a linear mapping, i.e. only support values for the coefficients b, c, and f.]()

Note: ASAM formula coefficients: $(ax^2 + bx + c) / (dx^2 + ex + f)$ supporting on b, c and f.

[SWS_Dem_00756] [The Dem shall provide an API `Dem_SetDTR` within an interface `DTRCentralReport` to provide a report mechanism to the SWC for their test results. Arguments shall be the `DemDtrId`, the test value, the minimum and maximum limit, and a state indicating whether the monitor provides a valid minimum limit, maximum limit, or both, or whether the reported values shall be reset to zero.] (*RS_Diag_04179*)

[SWS_Dem_00757] [If `DemDtrEventRef` references a `DemEventParameter`, the `Dem` shall process the reported `DTR` values only if all the enable/storage conditions of the referenced event are fulfilled, independent of `DemDtrUpdateKind`. If any of the enable/storage conditions of the referenced event are not fulfilled, then the `Dem` shall ignore the reported `DTR` values.] ()

Note the example with `DEM_DTR_UPDATE_STEADY`: If an event has reached that status TESTED starting from an initialized state but has not detected a FAILED, the received `DTR` values within the limits are processed (=converted and stored). If the test result violates its associated limit (cf. control value) while the event is indeed TESTED and FAILED, the `DTR` report is processed as well. But if the test result violates its associated limit (cf. control value) while the event is TESTED and PASSED, the `DTR` report is ignored assuming that the EventId is also not updated for good reasons (cf. enable / storage conditions).

Applying this validation check within the `DTR` report, the data consistency in Service\$06 and \$07 is ensured.

[SWS_Dem_00758] [The Dem shall support a conversion of the ECUinternal resolution into the standardized external uint16 size and resolution according to the configured and standardized UaSID. For that reason, the conversion formula is configured per `DTR`. It is assumed that the conveyed parameter of the API call contain the values in the internal size and resolution. The Dem does offer sint32 as parameter for that reason to cover uint16 as well as sint16 (or even sint32) internal data types.] ()

[SWS_Dem_00759] [The `Dem` shall ensure the validity of the test results vs. threshold(s). If the parameter `TestResult` passed in `Dem_SetDTR` is inside/outside the thresholds given by `UpperLimit` and `LowerLimit`, `Testvalue` of `Dem_DcmGetDTRData` shall also be inside/outside `Upplimvalue` and `Lowlimvalue`. If rounding effects lead to an unintended change of the meaning, the thresholds shall be shifted by one increment accordingly to restore the result.] (*RS_Diag_04179*)

[SWS_Dem_00760] Computing available OBD MID values [If `Dem_DcmGetAvailableOBDMIDs` is called with an "availability Obdmid" value of 0x00, 0x20, 0x40, 0x60, 0x80, 0xA0, 0xC0 or 0xE0 and the `Dem` has configured `DemDtrMid`, the `Dem` shall compute and provide the "Supported-OBDMID" information in the OUT parameter `Obdmidvalue` and return `E_OK`. The computed Obdmids parameter is according to ISO 15031-5[12] and sets a bit for each supported Obdmid in the request range (starting with Obdmid+1) and having the last bit of the `Obdmidvalue` set, if any subsequent range has configured Obdmids.] ()

[SWS_Dem_01301] Behavior on invalid Obdmid value [If `Dem_DcmGetAvailableOBDMIDs` is called with an invalid Obdmid value which is different to 0x00, 0x20,

0x40, 0x60, 0x80, 0xA0, 0xC0 or 0xE0, the [Dem](#) shall report the [Det](#) development error [DEM_E_INVALID_OBDMID.](#)]()

[SWS_Dem_00761] [Upon request by the [Dcm](#), the [Dem](#) shall respond with the number of TIDs per requested OBDMID using the API [Dem_DcmGetNumTIDsOfOBDMID](#). This value can be used by the [Dcm](#) to iteratively request for the [DTR](#) data per OBDMID / TID-index whereas the TID-index loops from 0 to number-of-TIDs minus one.]()

[SWS_Dem_00762] [Upon request by the [Dcm](#), the [Dem](#) shall respond with the data available for a particular OBDMID / TIDindex per requested OBDMID using the API [Dem_DcmGetDTRData](#). This value can be used by the [Dcm](#) to iteratively request for the [DTR](#) data per OBDMID / TIDindex starting from 0 to numberofTIDs minus one.]()

[SWS_Dem_00763] [The [Dem](#) shall reset the [DTR](#) data using the reference to the Event per [DTR](#), whenever the Event is affected by a fault clear command.]()

[SWS_Dem_00764] [If no Event is assigned per [DTR](#), the [Dem](#) shall reset the [DTR](#) data upon a Service\$04 clear command by the [Dcm](#), i.e. a [Dem_ClearDTC](#) with:

DTC = [DEM_DTC_GROUP_ALL_DTCS](#)

DTCFormat = [DEM_DTC_FORMAT_OBD](#)

DTCOrigin = [DEM_DTC_ORIGIN_PRIMARY_MEMORY](#)

]()

[SWS_Dem_CONSTR_06149] Dependency on container DemDtr [The container [DemDtr](#) shall only be available if [DemOBDSupport](#) is set to [DEM_OBD_MASTER_ECU](#) or [DEM_OBD_PRIMARY_ECU](#).]()

A [DTR](#) can refer to an event via [DemDtrEventRef](#). The referenced event can be unavailable according to chapter chapter [7.4.8](#). In this case the [Dem](#) treats the [DTR](#) as not supported and will neither compute the [DTR](#) or report a result of it.

[SWS_Dem_01335] Setting DTR results for unavailable events [If [Dem_SetDTR](#) is called for an [DTR](#) that references via [DemDtrEventRef](#) an event that itself is configured with [DemEventAvailable](#) to FALSE, the [Dem](#) shall return E_NOT_OK and not compute the [DTR](#).] ([RS_Diag_04126](#))

[SWS_Dem_01336] Reporting DTRs for unavailable events [If [Dem_DcmGetDTRData](#) is called for an [DTR](#) that references via [DemDtrEventRef](#) an event that itself is configured with [DemEventAvailable](#) to FALSE, the [Dem](#) shall return E_NOT_OK. In this case all the out-parameters of [Dem_DcmGetDTRData](#) are undefined.] ([RS_Diag_04126](#))

7.9.5.6 Service \$07 - Read emission-related diagnostic trouble codes detected during current or last completed driving cycle

The diagnostic service provides the OBD DTCs where the [DTC](#) Status bit 2 (PendingDTC) is currently set. Therefore the interfaces described in chapter [8.3.4.1](#) will be used by [Dcm](#).

7.9.5.7 Service \$0A - Read Emission-Related Diagnostic Trouble Codes with Permanent Status

Permanent DTCs are stored in the permanent fault memory.

An OBD related DTC entering the permanent fault memory with illuminating the MIL and leaving it with deactivating the MIL.

The permanent fault memory is robust against ClearDTC and Power Fail. After a ClearDTC an event can only be removed from the permanent fault memory under special conditions. This special conditions are defined by the OBD regulation.

[SWS_Dem_00300] [The Dem shall be able to handle Permanent DTCs according to regulations (refer to [\[20\]](#)) within the specific [event memory](#) type "permanent".]()

For details see chapter [7.3.4](#).

[SWS_Dem_00590] [Events that have been confirmed and activate the MIL, shall be stored robustly against ClearDTC or powerfail (for details confer [\[20\]](#)).]()

For details refer to OBDrelevant DTCs, chapter [7.4.1](#).

[SWS_Dem_00301] [The Dem shall provide the ability to access the non-volatile stored Permanent DTC by filtering for permanent DTCs to the [Dcm](#) (refer to [Dem_SetDTCFilter](#) and [Dem_GetNextFilteredDTC](#)).]()

Note: For service \$0A, the Dcm uses the DTCOrigin [DEM_DTC_ORIGIN_PERMANENT_MEMORY](#).

[SWS_Dem_01076] [New permanent faults of the current driving cycle shall be reported to the [Dcm](#) service \$0A request latest after the next [OBD](#) driving cycle starts.]()

[SWS_Dem_01077] [New permanent faults shall be stored in non-volatile memory (Next Driving Cycle after WriteAll or after positive Callback from NvM) latest at [ECU](#) shutdown.]()

In a [Master ECU](#) the interface [Dem_GetCycleQualified](#) can be used to read the current state of the [PFC cycle](#), providing the operation cycle id of the [DemOBDPFC-CycleRef](#). A value of TRUE in [isQualified](#) indicates that during the current OBD driving cycle the conditions for the [PFC cycle](#) have been met.

Note: A SWC on the MIL Master Ecu forwards the information "Minimum trip conditions satisfied" (PFC cycle) via Bussystem to the primary ECUs.

Note: A software component in the Master ECU optionally polls the API `Dem_GetCycleQualified` and send the information via the bussystem.

In a `primary ECU` the interface `Dem_GetCycleQualified` can be used to get informed that the current OBD driving cycle has met the criteria for the PFC cycle by a software component.

7.9.5.8 MIL Handling

Typically, the “MIL Master functionality“ is located in the OBD `master ECU`. Only the MIL master functionality is allowed to send the `MIL` request to the instrument cluster.

Therefore in `primary ECUs` the function `Dem_GetIndicatorStatus` can be used to poll the `MIL` indicator status and send the information to the “MIL Master functionality“ (e.g. located in the `master ECU`).

7.9.6 WWH-OBD

7.9.6.1 DTC WWHOBD class

[SWS_Dem_01140] [The `Dem` shall provide a class value per DTC (to characterize the impact of a malfunction `OBD` system's monitoring capability) according to ISO 14229-1 [1], Annex D.3 “DTCSeverityMask and DTC class information bit definitions” (refer to `Dem_GetSeverityOfDTC` and `Dem_GetNextFilteredDTCAndSeverity`), only if configured for at least one DTC.]()

[SWS_Dem_CONSTR_6109] [The DTC class is only available for ISO 14229-1 [1] DTCs. It is configurable per DTC optionally (refer to `DemWWHOBDDTCClass`).]()

[SWS_Dem_CONSTR_6110] [The `WWH-OBD` DTC priority shall be according table [Table 7.4](#).]()

WWH-OBD DTC class	Priority
A	> B1 DTC
B1	> B2 DTC
B2	> C DTC
C	> no OBD DTC

Table 7.4: WWH-OBD DTC priority

Note : ISO 27145-3 [21] defines the following DTC Classes utilizing the severity levels: No Class, Class A, Class B1, Class B2 and Class C.

7.9.6.2 Continuous-MI counter

The counter [Continuous-MI counter](#) is representing the number of engine hours during which the MIL was continuously commanded to be on.

[SWS_Dem_01141] [If Activation Mode 4 becomes active the counter shall be reset to 0.]()

[SWS_Dem_01142] [The counter shall increment for each engine operating hour during which the event is detected and the Continuous-MI is commanded to be on.]()

[SWS_Dem_01143] [The counter shall halt its value when the Continuous-MI is no longer commanded to be on.]()

[SWS_Dem_01144] [The counter shall continue its incrementation if the Continuous-MI is again commanded on within three operation sequences.]()

[SWS_Dem_01145] [The counter shall reset to zero and start incrementing its value if the Continuous-MI is again commanded on after more than three operation sequences.]()

[SWS_Dem_01146] [The counter shall reset to zero if the Continuous-MI is not commanded on after more than 40 warm-up cycles or after more than 200 engine operating hours or upon a ClearDTC request.]()

[SWS_Dem_01147] [The counter shall be reported as a two byte value. If any count operation occurs which would cause a counter to roll over past 0x00FF then the count value shall instead be maintained at 0x00FF.]()

[SWS_Dem_01148] [The counter shall be stored non-volatile.]()

7.9.6.3 Cumulative Continuous-MI counter (Master ECU)

The counter [Cumulative Continuous-MI counter](#) is representing the number of engine hours during which MIL has been continuously commanded to be on during its lifetime. The counter shall only be implemented in the [VOBD](#).

[SWS_Dem_01149] [The counter shall increment for each engine operating hour during which the event is detected and the Continuous-MI is commanded to be on.]()

[SWS_Dem_01150] [The counter shall halt its value when the Continuous-MI is no longer commanded to be on.]()

[SWS_Dem_01151] [The counter shall never be reset.]()

[SWS_Dem_01152] [The counter shall be reported as a two byte value. If any count operation occurs which would cause a counter to roll over past 0x00FF then the count value shall instead be maintained at 0x00FF.]()

[SWS_Dem_01153] [The counter shall be stored non-volatile.]()

7.9.6.4 Class B1 counter

The [Class B1 counter](#) is representing the number of engine hours during which a Class B1 has been Confirmed and TestFailed. The counter can be implemented as global, i.e. one counter per ECU or local, i.e. one counter per B1 Event. The [Dem](#) module supports only the global [B1 counter](#).

[SWS_Dem_01154] [The B1 counter shall increment for each 1 hour engine operating hour during which at least one Class B1 event is detected as Confirmed and TestFailed.]()

[SWS_Dem_01155] [The B1 counter shall latch its value when no Class B1 event is no longer detected as Confirmed and TestFailed or after a ClearDTC request.]()

The B1 counter continue its incrementation if a Class B1 event is again detected as Confirmed and TestFailed.

[SWS_Dem_01156] [The B1 counter shall reset to zero after three consecutive operating sequences where no Class B1 event have been detected.]()

[SWS_Dem_01157] [If B1 Counter exceeds 200 engine operating hours and no Class B1 event have been detected the counter shall be set to 190.]()

[SWS_Dem_01158] [The B1 counter shall be reported as a two byte value. If any count operation occurs which would cause a counter to roll over past 0x00FF then the count value shall instead be latched at 0x00FF.]()

[SWS_Dem_01159] [The B1 counter shall be stored non-volatile.]()

7.9.6.5 Activation Mode

Activation Mode Escalation

[SWS_Dem_01160] [If the B1 counter exceeds 200 engine operating hours the [Activation Mode 4](#) shall be active.]()

[SWS_Dem_01161] [If at least one Class A event is Confirmed and TestFailed the [Activation Mode 4](#) shall be active.]()

Activation Mode Deescalation/ Healing

[SWS_Dem_01162] [If Activation Mode 4 is active and no Activation Mode 4 relevant condition is present anymore, then the Activation Mode 3 shall be activated.]()

[SWS_Dem_01163] [If Activation Mode 4 has been degraded to Activation Mode 3 and an Activation Mode 4 relevant event is confirmed the Activation Mode 4 shall be reactivated if the configured value of EventFailureCycleCounterThreshold is reached.]()

[SWS_Dem_01164] [If Activation Mode 3 is active and no Activation Mode 3 and Activation Mode 4 relevant condition is present, then the Activation Mode 1 shall be set.]()

[SWS_Dem_01165] [If an Class C event is Confirmed and TestFailed and no Activation Mode 3 or Activation Mode 4 is active, the Activation Mode 2 shall be set to active.]()

[SWS_Dem_01166] [The function Dem_GetIndicatorStatus shall return the current "indicator status"(refer to Table 7.5) of those events referenced by the Dem_MILIndicatorRef. The conditions for the activation modes are defined in Table 7.5.]()

Condition	Activation Mode	Indicator Status
No WWH-OBD event active	1	DEM_INDICATOR_OFF
Class C event active	2	DEM_INDICATOR_ON_DEMAND
Class B event active and B1 counter < 200h	3	DEM_INDICATOR_SHORT
Class A event active or B1 counter >= 200h	4	DEM_INDICATOR_CONTINUOUS

Table 7.5: Mapping of conditions to the activation mode

7.9.6.6 Freeze Frame 0x00

The Freeze Frame shall provide the operating conditions of the vehicle at the time of malfunction detection.

[SWS_Dem_01170] [The legislative Freeze Frame 0x00 shall be stored on transition of UDS status bit 2 from 0 to 1 (via DemFreezeFrameRecordTrigger set to DEM_TRIGGER_ON_PENDING).]()

[SWS_Dem_01171] [The update behavior if the Freeze Frame 0x00 is updated on transition of UDS status bit 3 from 0 to 1, can be configured using DemFreezeFrameRecordUpdate.]()

[SWS_Dem_01172] [The storage/reporting of freeze frame information associated with a Class A malfunction shall take precedence over a Class B1 malfunction which

shall take precedence over a Class B2 malfunction and likewise for information associated with a Class C malfunction.]()

[SWS_Dem_01173] [The first malfunction detected shall take precedence over the most recent malfunction unless the most recent malfunction is of a higher class.]()

[SWS_Dem_01174] [The Freeze Frame 0x00 shall be erased if the event was removed from fault memory due to aging.]()

[SWS_Dem_01175] [The legislative freeze frame 0x00 is configured analogues to the non-emission related freeze frames.]()

For details see chapter [7.7.7.1](#).

7.9.6.7 Extended Data Record 0x90

Extended Data Record 0x90 is not supported due to a single B1 counter only supported in Dem.

7.9.6.8 Aging

[SWS_Dem_01176] [Additional to event aging (refer to [\[SWS_Dem_00698\]](#)) the event shall be aged after 200 hours of engine operation while the aging conditions are met.]()

For details see chapter [7.7.8](#).

[SWS_Dem_CONSTR_6111] [An [OBD](#) related DTC shall have an aging counter threshold of 40.]()

[SWS_Dem_CONSTR_6112] [An [OBD](#) related DTC shall have the Warm-Up cycle as aging cycle.]()

7.9.6.9 Service \$19 42 - Read WWH-OBD DTC By Mask Record

This diagnostic service returns the [OBD](#) related DTCs that will match the given DTC Status mask and DTC Severity mask.

[SWS_Dem_01177] [The interface [Dem_GetDTCSeverityAvailabilityMask](#) shall provide the `DtcSeverityAvailabilityMask` to the DCM.]()

Note: The `DTCSeverityAvailabilityMask` can be derived from the configured DTC severity and the [WWH-OBD](#) DTC class.

7.9.6.10 Service \$14 FFFF33 - Clear Emission Related DTCs

[SWS_Dem_01178] [In addition to clearing [event memory entries](#) (refer to [\[SWS_Dem_01203\]](#)) the Dem shall clear/reset the following values:

- Activation Mode
- Readiness (PID \$01, PID \$41 and PID \$90)
- Continuous-MI Counter
- Highest ECU B1 Counter
- B1 Counter
- Legislative Freeze Frame

]()

For details see chapter [7.7.2.2](#).

[SWS_Dem_01179] [Service \$14 FFFF33 shall clear all DTCs ([WWH-OBD](#) DTCs and UDS DTCs)]()

7.10 J1939 specific functionality

The Dem module is capable to support J1939 networks. On these, it uses a J1939 specific DTC.

[SWS_Dem_00845] [The J1939 support shall be available in case the configuration container [DemGeneralJ1939](#) (see [DemGeneral](#)) is present.] ([RS_Diag_04112](#))

Note: The [Dem](#) is designed to distinguish 'Service only DTCs' and 'all other DTCs' assigning [DTCs](#) to certain [event memories](#). In order to work correctly, with the [J1939Dcm](#) APIs 'Service only DTCs' need to be assigned to the user defined memory. All other [DTCs](#) need to be assigned to primary memory.

7.10.1 Read DTC

[SWS_Dem_00855] [The function [Dem_J1939DcmSetDTCFilter](#) shall set the filter mask attributes to be used for the subsequent calls of [Dem_J1939DcmGetNumberOfFilteredDTC](#) and [Dem_J1939DcmGetNextFilteredDTC](#), and reset an internal counter to the first event.] ([RS_Diag_04112](#))

[SWS_Dem_00856] [The filter mask attributes set via [Dem_J1939DcmSetDTCFilter](#) shall be used until the next call of [Dem_J1939DcmSetDTCFilter](#) or Dem initialization.] ([RS_Diag_04112](#))

[SWS_Dem_00857] [The function `Dem_J1939DcmSetDTCFilter` shall return the current composite status of the J1939 lamps. The matching filter criteria are defined in [Table 7.6.](#).]()

<i>SetFilter Parameter</i>	<i>UDS Status filter</i>	<i>further filter criteria</i>	<i>DM representation</i>	
			<i>AllDTCs</i>	<i>EmissionDTCs</i>
DEM_J1939DTC_ACTIVE	(ConfirmedDTC == 1 AND TestFailed == 1) OR MIL_ON	n/a	DM01	DM12
DEM_J1939DTC_PREVIOUSLY_ACTIVE	ConfirmedDTC == 1 AND TestFailed == 0 AND MIL_OFF	n/a	DM02	DM23
DEM_J1939DTC_PENDING	PendingDTC == 1	n/a	DM27	DM06
DEM_J1939DTC_PERMANENT	n/a	permanent memory entry available	n/a	DM28
DEM_J1939DTC_CURRENTLY_ACTIVE	TestFailed == 1	n/a	DM35	n/a

Table 7.6: Types of errors which can be detected by the Dem module

Each reading of DTC returns a composite lamp status of the following lamps:

- a) Malfunction Indicator Lamp
- b) Red Stop Lamp
- c) Amber Warning Lamp
- d) Protect Lamp

7.10.1.1 Composite Malfunction Indicator Lamp Status

[SWS_Dem_00858] [The composite “Malfunction Indicator Lamp” shall be set to “Lamp Off” in case the Indicator referenced by `DemMILIndicatorRef` has an `IndicatorStatus DEM_INDICATOR_OFF`. All other `IndicatorStatus` states than “DEM_INDICATOR_OFF” shall set the composite Malfunction Indicator Lamp to “Lamp On”.] ([RS_Diag_04110](#))

[SWS_Dem_00859] [The composite “Flash Malfunction Indicator Lamp” shall be set to “Unavailable / Do Not Flash” (0x03) in case the Indicator referenced by `DemMILIndicatorRef` has an `IndicatorStatus DEM_INDICATOR_OFF` or `DEM_INDICATOR_CONTINUOUS`.] ([RS_Diag_04110](#))

[SWS_Dem_00860] [The composite “Flash Malfunction Indicator Lamp” shall be set to “Slow Flash” (0x00) in case the Indicator referenced by `DemMILIndicatorRef` has an `IndicatorStatus DEM_INDICATOR_SLOW_FLASH`.] ([RS_Diag_04110](#))

[SWS_Dem_00861] [The composite “Flash Malfunction Indicator Lamp” shall be set to “Fast Flash” (0x01) in case the Indicator referenced by [DemMILIndicatorRef](#) has an IndicatorStatus [DEM_INDICATOR_FAST_FLASH](#).] ([RS_Diag_04110](#))

7.10.1.2 Composite Red Stop Lamp Status

[SWS_Dem_00862] [The composite “Red Stop Lamp” shall be set to “Lamp Off” in case the Indicator referenced by [DemRedStopLampIndicatorRef](#) has an IndicatorStatus [DEM_INDICATOR_OFF](#). All other IndicatorStatus states than “DEM_INDICATOR_OFF” shall set the composite Red Stop Lamp to “Lamp On”.] ([RS_Diag_04110](#))

[SWS_Dem_00863] [The composite “Flash Red Stop Lamp” shall be set to “Unavailable / Do Not Flash” (0x03) in case the Indicator referenced by [DemRedStopLampIndicatorRef](#) has an IndicatorStatus [DEM_INDICATOR_OFF](#) or [DEM_INDICATOR_CONTINUOUS](#).] ([RS_Diag_04110](#))

[SWS_Dem_00864] [The composite “Flash Red Stop Lamp” shall be set to “Slow Flash” (0x00) in case the Indicator referenced by [DemRedStopLampIndicatorRef](#) has an IndicatorStatus [DEM_INDICATOR_SLOW_FLASH](#).] ([RS_Diag_04112](#))

[SWS_Dem_00865] [The composite “Flash Red Stop Lamp” shall be set to “Fast Flash” (0x01) in case the Indicator referenced by [DemRedStopLampIndicatorRef](#) has an IndicatorStatus [DEM_INDICATOR_FAST_FLASH](#).] ()

7.10.1.3 Composite Amber Warning Lamp Status

[SWS_Dem_00866] [The composite “Amber Warning Lamp” shall be set to “Lamp Off” in case the Indicator referenced by [DemAmberWarningLampIndicatorRef](#) has an IndicatorStatus [DEM_INDICATOR_OFF](#). All other IndicatorStatus states than [DEM_INDICATOR_OFF](#) shall set the composite Amber Warning Lamp to “Lamp On”.] ([RS_Diag_04110](#))

[SWS_Dem_00867] [The composite “Amber Warning Lamp” shall be set to “Unavailable / Do Not Flash” (0x03) in case the Indicator referenced by [DemAmberWarningLampIndicatorRef](#) has an IndicatorStatus [DEM_INDICATOR_OFF](#) or [DEM_INDICATOR_CONTINUOUS](#).] ([RS_Diag_04110](#))

[SWS_Dem_00868] [The composite “Flash Amber Warning Lamp” shall be set to “Slow Flash” (0x00) in case the Indicator referenced by [DemAmberWarningLampIndicatorRef](#) has an IndicatorStatus [DEM_INDICATOR_SLOW_FLASH](#).] ([RS_Diag_04110](#))

[SWS_Dem_00869] [The composite “Flash Amber Warning Lamp” shall be set to “Fast Flash” (0x01) in case the Indicator referenced by [DemAmberWarningLampIndicatorRef](#) has an IndicatorStatus [DEM_INDICATOR_FAST_FLASH](#).] ([RS_Diag_04110](#))

7.10.1.4 Composite Protect Lamp Status

[SWS_Dem_00870] [The composite “Protect Lamp” shall be set to “Lamp Off” in case the Indicator referenced by `DemProtectLampIndicatorRef` has an `IndicatorStatus DEM_INDICATOR_OFF`. All other `IndicatorStatus` states than `DEM_INDICATOR_OFF` shall set the composite Protect Lamp to “Lamp On”.] (*RS_Diag_04110*)

[SWS_Dem_00871] [The composite “Flash Protect Lamp” shall be set to “Unavailable / Do Not Flash” (0x03) in case the Indicator referenced by `DemProtectLampIndicatorRef` has an `IndicatorStatus DEM_INDICATOR_OFF` or `DEM_INDICATOR_CONTINUOUS`.] ()

[SWS_Dem_00872] [The composite “Flash Protect Lamp” shall be set to “Slow Flash” (0x00) in case the Indicator referenced by `DemProtectLampIndicatorRef` has an `IndicatorStatus DEM_INDICATOR_SLOW_FLASH`.] (*RS_Diag_04110*)

[SWS_Dem_00873] [The composite “Flash Protect Lamp” shall be set to “Fast Flash” (0x01) in case the Indicator referenced by `DemProtectLampIndicatorRef` has an `IndicatorStatus DEM_INDICATOR_FAST_FLASH`.] (*RS_Diag_04110*)

7.10.1.5 DTC data acquisition

[SWS_Dem_00874] [The function `Dem_J1939DcmGetNumberOfFilteredDTC` shall return the number of J1939 DTCs matching the defined filter criteria of [Table 7.6](#) for the corresponding primary event memory of the requested ClientId by the function call of `Dem_J1939DcmSetDTCFilter`.

- In case the function has calculated the total number of matching DTCs, the return value shall be `E_OK`.
- In case the search needs to be interrupted due to internal implementations or limitations, the return value can be set to `DEM_PENDING`. The `out` parameter needs not to be valid in this case. The next call of `Dem_J1939DcmGetNumberOfFilteredDTC` should continue after the interrupted element.

] (*RS_Diag_04112*)

[SWS_Dem_00875] [Each call of the function `Dem_J1939DcmGetNextFilteredDTC` shall search for the next event having a J1939DTC assigned and matching the filter criteria of [Table 7.6](#) for the node provided by the function call of `Dem_J1939DcmSetDTCFilter`. In case no more events are matching the filter criteria, the function return value shall be `DEM_NO SUCH ELEMENT`. The `out` parameters need not to be valid in this case.] (*RS_Diag_04112*)

[SWS_Dem_00877] [In case the function `Dem_J1939DcmGetNextFilteredDTC` has found an event matching the filter criteria it shall return the corresponding

J1939DTC (refer to [DemDTCAttributes](#) for details) and the corresponding occurrence counter. The return value shall be E_OK. In case the search needs to be interrupted due to internal implementations or limitations, the return value can be set to DEM_PENDING. The out parameter needs not to be valid in this case. The next call of [Dem_J1939DcmGetNextFilteredDTC](#) should continue after the interrupted element. In case the occurrence counter is above +126 (0x7E), the returned values shall be set to +126 (0x7E).] ([RS_Diag_04111](#))

7.10.2 Clear DTCs

For definition of locking the clearing process, refer to chapter [7.7.2.2](#).

[SWS_Dem_00878] [The Dem module shall provide the [Dem_J1939DcmClearDTC](#) to the J1939Dcm [7] for deleting all active or previously active DTCs from the [event memory](#). This shall trigger also initializing of related SW-Cs / BSW modules according to [\[SWS_Dem_00003\]](#).] ()

When one of the diagnostic messages DM03 and DM11 of SAE J1939-73 [14] are requested, all active (DM11) or previously active (DM03) DTCs have to be cleared, along with additional information like freeze frames.

[SWS_Dem_00879] [The function [Dem_J1939DcmClearDTC](#) shall clear the status of all event(s) related to the specified DTC(s), as well as all associated [event memory entries](#) for these event(s).] ([RS_Diag_04117](#))

Note: Exceptions may apply due to [\[SWS_Dem_00515\]](#).

7.10.3 DM31

The DM31 provides the applicable lamp(s) and their status for each individual DTC, wherefore the DTC-specific lamp status needs to be returned by the function [Dem_J1939DcmFirstDTCwithLampStatus](#).

[SWS_Dem_00880] [Each call to [Dem_J1939DcmFirstDTCwithLampStatus](#) shall set the internal counter to the first event having a J1939DTC for this particular “ClientId” assiged.] ([RS_Diag_04113](#))

[SWS_Dem_00881] [Each call to [Dem_J1939DcmGetNextDTCwithLampStatus](#) shall search within the event memory (set by the function [Dem_J1939DcmFirstDTCwithLampStatus](#)) for the next event having a J1939DTC assigned. In case no more events are available that have a J1939DTC assigend, the function return value shall be DEM_NO_SUCH_ELEMENT. The out parameter needs not to be valid in this case.] ([RS_Diag_04113](#))

[SWS_Dem_00882] [In case [Dem_J1939DcmGetNextDTCwithLampStatus](#) has found an event matching the filter criteria it shall return the J1939DTC specific status

of the lamps (refer to following sections for details), the corresponding J1939DTC (refer [DemDTCAttributes](#) for details) and the corresponding occurrence counter. The return value shall be E_OK. In case the search needs to be interrupted due to internal implementations or limitations, the return value can be set to DEM_PENDING. The out parameter needs not to be valid in this case. The next call of [Dem_J1939DcmGetNextDTCwithLampStatus](#) should continue after the interrupted element. In case the occurrence counter is above +126 (0x7F), the returned values shall be set to +126 (0x7F).] ([RS_Diag_04113](#))

7.10.3.1 Malfunction Indicator Lamp

[SWS_Dem_00883] [The DTC-specific “Malfunction Indicator Lamp” returned in the function [Dem_J1939DcmGetNextDTCwithLampStatus](#) shall be set to “Lamp On” in case the corresponding event has assigned the Indicator referenced by [DemMILIndicatorRef](#) and the UDS status bit 7 (WarningIndicator) is active (set to 1), otherwise it shall be set to ‘Lamp Off’.] ([RS_Diag_04110](#))

[SWS_Dem_00884] [The DTC-specific “Flash Malfunction Indicator Lamp” shall be set to “Unavailable / Do Not Flash” (0x03) in case the corresponding event has set “Lamp On” and the [DemIndicatorBehaviour](#) of the Indicator referenced by [DemMILIndicatorRef](#) is set to [DEM_INDICATOR_CONTINUOUS](#).] ([RS_Diag_04110](#))

[SWS_Dem_00885] [The DTC-specific “Flash Malfunction Indicator Lamp” shall be set to “Slow Flash” (0x00) in case the corresponding event has set “Lamp On” and the [DemIndicatorBehaviour](#) of the Indicator referenced by [DemMILIndicatorRef](#) is set to [DEM_INDICATOR_SLOW_FLASH](#).] ([RS_Diag_04110](#))

[SWS_Dem_00886] [The DTC-specific “Flash Malfunction Indicator Lamp” shall be set to “Fast Flash” (0x01) in case the corresponding event has set “Lamp On” and the [DemIndicatorBehaviour](#) of the Indicator referenced by [DemMILIndicatorRef](#) is set to [DEM_INDICATOR_FAST_FLASH](#).] ()

7.10.3.2 Red Stop Lamp

[SWS_Dem_00887] [The DTC-specific “Red Stop Lamp” returned in the function [Dem_J1939DcmGetNextDTCwithLampStatus](#) shall be set to “Lamp On” in case the corresponding event has assigned the Indicator referenced by [DemRedStopIndicatorRef](#) and the UDS status bit 7 (WarningIndicator) is active (set to 1), otherwise it shall be set to “Lamp Off”.] ([RS_Diag_04110](#))

[SWS_Dem_00888] [The DTC-specific “Flash Red Stop Lamp” shall be set to “Unavailable / Do Not Flash” (0x03) in case the corresponding event has set “Lamp On” and the [DemIndicatorBehaviour](#) of the Indicator referenced by [DemRedStopIndicatorRef](#) is set to [DEM_INDICATOR_CONTINUOUS](#).] ([RS_Diag_04110](#))

[SWS_Dem_00889] [The DTC-specific “Flash Red Stop Lamp” shall be set to “Slow Flash” (0x00) in case the corresponding event has set “Lamp On” and the `DemIndicatorBehaviour` of the Indicator referenced by `DemRedStopIndicatorRef` is set to `DEM_INDICATOR_SLOW_FLASH.`.] (*RS_Diag_04110*)

[SWS_Dem_00890] [The DTC-specific “Flash Red Stop Lamp” shall be set to “Fast Flash” (0x01) in case the corresponding event has set “Lamp On” and the `DemIndicatorBehaviour` of the Indicator referenced by `DemRedStopIndicatorRef` is set to `DEM_INDICATOR_FAST_FLASH.`.] ()

7.10.3.3 Amber Warning Lamp

[SWS_Dem_00891] [The DTC-specific “Amber Warning Lamp” returned in the function `Dem_J1939DcmGetNextDTCwithLampStatus` shall be set to “Lamp On” in case the corresponding event has assigned the Indicator referenced by `DemAmberWarningIndicatorRef` and the UDS status bit 7 (WarningIndicator) is active (set to 1), otherwise it shall be set to “Lamp Off”.] (*RS_Diag_04110*)

[SWS_Dem_00892] [The DTC-specific “Flash Amber Warning Lamp” shall be set to “Unavailable / Do Not Flash” (0x03) in case the corresponding event has set “Lamp On” and the `DemIndicatorBehaviour` of the Indicator referenced by `DemAmberWarningIndicatorRef` is set to `DEM_INDICATOR_CONTINUOUS.`.] (*RS_Diag_04110*)

[SWS_Dem_00893] [The DTC-specific “Flash Amber Warning Lamp” shall be set to “Slow Flash” (0x00) in case the corresponding event has set “Lamp On” and the `DemIndicatorBehaviour` of the Indicator referenced by `DemAmberWarningIndicatorRef` is set to `DEM_INDICATOR_SLOW_FLASH.`.] (*RS_Diag_04110*)

[SWS_Dem_00894] [The DTC-specific “Flash Amber Warning Lamp” shall be set to “Fast Flash” (0x01) in case the corresponding event has set “Lamp On” and the `DemIndicatorBehaviour` of the Indicator referenced by `DemAmberWarningIndicatorRef` is set to `DEM_INDICATOR_FAST_FLASH.`.] (*RS_Diag_04110*)

7.10.3.4 Protect Lamp

[SWS_Dem_00895] [The DTC-specific “Protect Lamp” returned in the function `Dem_J1939DcmGetNextDTCwithLampStatus` shall be set to “Lamp On” in case the corresponding event has assigned the Indicator referenced by `DemProtectLampIndicatorRef` and the UDS status bit 7 (WarningIndicator) is active (set to 1), otherwise it shall be set to “Lamp Off”.] (*RS_Diag_04110*)

[SWS_Dem_00896] [The DTC-specific “Flash Protect Lamp” shall be set to “Unavailable / Do Not Flash” (0x03) in case the corresponding event has set “Lamp On” and the `DemIndicatorBehaviour` of the Indicator referenced by `DemProtectLampIndicatorRef` is set to `DEM_INDICATOR_CONTINUOUS.`.] ()

[SWS_Dem_00897] [The DTC-specific “Flash Protect Lamp” shall be set to “Slow Flash” (0x00) in case the corresponding event has set “Lamp On” and the `DemIndicatorBehaviour` of the Indicator referenced by `DemProtectLampIndicatorRef` is set to `DEM_INDICATOR_SLOW_FLASH`.] (*RS_Diag_04110*)

[SWS_Dem_00898] [The DTC-specific “Flash Protect Lamp” shall be set to “Fast Flash” (0x01) in case the corresponding event has set “Lamp On” and the `DemIndicatorBehaviour` of the Indicator referenced by `DemProtectLampIndicatorRef` is set to `DEM_INDICATOR_FAST_FLASH`.] (*RS_Diag_04110*)

7.10.3.5 J1939 lamp status

[SWS_Dem_01310] [If the configuration parameter `DemInternalDataElement` is set to `DEM_J1939LAMP_STATUS`, then the lamp status in the format of type `Dem_J1939DcmLampStatusType` shall be mapped to the respective data element.] (*RS_Diag_04134, RS_Diag_04190*)

For details see chapter 7.10.3.

[SWS_Dem_01311] [The `DemInternalDataElement` for `DEM_J1939LAMP_STATUS` shall contain the lamp status before the event was processed Dem internally.] (*RS_Diag_04134, RS_Diag_04190*)

7.10.4 FreezeFrame

[SWS_Dem_00899] [The function `Dem_J1939DcmSetFreezeFrameFilter` shall set the filter mask attributes to be used for the subsequent calls of `Dem_J1939DcmGetNextFreezeFrame`, and reset an internal counter to the first freeze frame. The filter mask attributes shall be used until the next call of `Dem_J1939DcmSetFreezeFrameFilter` or Dem initialization. The matching filter criteria are `DEM_J1939DCM_FREEZEFRAME` (filtering the data in `DemJ1939FreezeFrameClassRef`) or `DEM_J1939DCM_EXPANDED_FREEZEFRAME` (filtering the data in `DemJ1939ExpandedFreezeFrameClassRef`).] (*RS_Diag_04111*)

[SWS_Dem_00900] [Each function call of `Dem_J1939DcmGetNextFreezeFrame` shall step to the next (Expanded-)FreezeFrame for a specific event memory defined by the filter criteria (`FreezeFrameKind` and `ClientId`) of `Dem_J1939DcmSetFreezeFrameFilter`. In case no more (Expanded-)FreezeFrames are matching the filter criteria, the function shall return `DEM_NO SUCH ELEMENT`. The out parameters need not to be valid in this case.] (*RS_Diag_04111*)

[SWS_Dem_00901] [The function `Dem_J1939DcmGetNextFreezeFrame` shall trigger the `Det` error `DEM_E_WRONG_CONDITION` in case of not supported `FreezeFrameKind`. Valid values are `DEM_J1939DCM_FREEZEFRAME` and `DEM_J1939DCM_EXPANDED_FREEZEFRAME`.] (*RS_Diag_04111*)

[SWS_Dem_00902] [In case the search of [SWS_Dem_00901] needs to be interrupted due to internal implementations or limitations, the return value can be set to DEM_PENDING. The out parameter needs not to be valid in this case. The next call of [Dem_J1939DcmGetNextFreezeFrame](#) should continue after the interrupted element.] ([RS_Diag_04111](#))

[SWS_Dem_00903] [In case the function [Dem_J1939DcmGetNextFreezeFrame](#) has found a FreezeFrame, the Dem shall:

- Check if the buffer in the BufSize parameter is big enough to hold the (Expanded-)FreezeFrame. If not, DEM_FILTERED_BUFFER_TOO_SMALL shall be returned without any further actions. The out parameters need not to be valid in this case.
- Copy the (Expanded-)FreezeFrame data into the buffer provided by the parameter DestBuffer (in case of Expanded FreezeFrames without any SPN informations). Unused bits shall be filled with “0”.
- Set the parameter J1939DTC to the corresponding J1939DTC value (refer [DemDTCAttributes](#) for details) and the parameter OccurrenceCounter to the corresponding occurrence counter value.
- Return with E_OK. In case the occurrence counter is above +126 (0x7F), the returned value shall be set to +126 (0x7F).

] ([RS_Diag_04111](#))

7.10.4.1 SPNs in ExpandedFreezeFrame

[SWS_Dem_00904] [Each call to [Dem_J1939DcmGetNextSPNInFreezeFrame](#) shall step to the next SPN of the ExpandedFreezeFrame for this DemEventMemory. In case no more SPN of the ExpandedFreezeFrame definition is available, the function return value shall be DEM_NO_SUCH_ELEMENT. The out parameter needs not to be valid in this case.] ([RS_Diag_04111](#))

[SWS_Dem_00905] [In case the search of [SWS_Dem_00904] needs to be interrupted due to internal implementations or limitations, the return value can be set to DEM_PENDING. The out parameter needs not to be valid in this case. The next call of [Dem_J1939DcmGetNextSPNInFreezeFrame](#) should continue after the interrupted element.] ([RS_Diag_04111](#))

[SWS_Dem_00906] [The function [Dem_J1939DcmGetNextSPNInFreezeFrame](#) shall trigger the [Det](#) error DEM_E_WRONG_CONDITION in case of not supported FreezeFrameKind. Valid value is Dem_SPNsInExpandedFreezeFrame.] ([RS_Diag_04057](#), [RS_Diag_04111](#))

[SWS_Dem_00907] [In case [Dem_J1939DcmGetNextSPNInFreezeFrame](#) has found an SPN of the ExpandedFreezeFrame definition, the Dem shall:

- Check if the buffer in the BufSize parameter is big enough to hold the (Expanded-)FreezeFrame. If not, DEM_FILTERED_BUFFER_TOO_SMALL shall be returned without any further actions. The out parameters need not to be valid in this case.
- Copy the (Expanded-)FreezeFrame data into the buffer provided by the parameter DestBuffer (in case of Expanded FreezeFrames without any SPN informations). Unused bits shall be filled with “0”.
- Set the parameter J1939DTC to the corresponding J1939DTC value (refer [DemDTCAttributes](#) for details) and the parameter OccurrenceCounter to the corresponding occurrence counter value.
- Return with E_OK. In case the occurrence counter is above +126 (0x7F), the returned value shall be set to +126 (0x7F).

]([RS_Diag_04111](#))

7.10.5 Diagnostic Readiness

The Dem module needs to calculate internally the (Non-)Continuously Monitored Systems support and status for “Diagnostic Readiness 1” (DM05), “Diagnostic Readiness 2” (DM21), and “Diagnostic Readiness 3” (DM26).

[SWS_Dem_00908] [The J1939 events shall use the configuration parameter [DemEventOBDReadinessGroup](#) (refer to [DemObdDTC](#)) to assign individual events to a Continuously or Non-Continuously Monitored System.] ([RS_Diag_04113](#))

[Dem_J1939DcmReadDiagnosticReadiness1](#) reports the diagnostics information that relates to diagnostic readiness according DM05.

[SWS_Dem_00909] [A call of [Dem_J1939DcmReadDiagnosticReadiness1](#) shall report a response message based on the J1939-73 [14] DM05 definition:

- “Active Trouble Codes” shall report the number of active DTCs identical to the number of filtered DTCs by [Dem_J1939DcmSetDTCFilter](#) (Dem_Active, DEM_DTC_KIND_ALL_DTCS).
- “Previously Active Diagnostic Trouble Codes” shall report the number of previously active DTCs identical to the number of filtered DTCs by [Dem_J1939DcmSetDTCFilter](#) (Dem_PreviosulyActive, DEM_DTC_KIND_ALL_DTCS).
- “OBD Compliance” shall be based on the configuration parameter DemOBDCCompliance (in [DemGeneralOBD](#)). For nonOBD ECUs the value five (5) shall be reported.
- The (Non-)Continuously Monitored Systems support and status shall be reported according to SAE J1939-73 chapter 5.7.5.4 to 5.7.5.6. The calculation shall be based on those events referencing the corresponding configuration parameter

[DemEventOBDReadinessGroup](#). In case there is no reference by any event parameter, the support bit shall be set to zero (0). The “monitoring status” bit shall be set to “test complete” (0) if all assigned event parameter have the Test-NotCompletedSinceLastClear status bit set to zero (0), otherwise the “monitoring status” bit shall be set to “test not complete” (1).

] ([RS_Diag_04113](#))

[Dem_J1939DcmReadDiagnosticReadiness2](#) reports the diagnostic information relevant to a second PGN conveying diagnostic readiness according to DM21 (see also DM05).

[SWS_Dem_00910] [A call of [Dem_J1939DcmReadDiagnosticReadiness2](#) shall report a response message based on the J1939-73 [14] DM21 definition:

- “Distance Traveled While MIL is Activated” shall be identical to PID 0x21, except the maximum value is 64255 (all values above 64255 shall be reported as 64255).
- “Distance Since Diagnostic Trouble Codes Cleared” shall be identical to PID 0x31, except the maximum value is 64255 (all values above 64255 shall be reported as 64255).
- “Minutes Run by Engine While MIL is Activated” shall be identical to PID 0x4D, except the maximum value is 64255 (all values above 64255 shall be reported as 64255).
- “Time Since Diagnostic Trouble Codes Cleared” shall be identical to PID 0x4E, except the maximum value is 64255 (all values above 64255 shall be reported as 64255).

] ([RS_Diag_04112](#))

[Dem_J1939DcmReadDiagnosticReadiness3](#) reports the diagnostic information conveying the pending status of OBD system monitors for the current drive cycle according to DM26 (See also DM05 and DM21).

[SWS_Dem_00911] [A call of [Dem_J1939DcmReadDiagnosticReadiness3](#) shall report a response message based on the J1939-73 [14] DM26 definition:

- “Time Since Engine Start” shall be retrieved by the DemOBDTIMESinceEngineStart (in [DemGeneralOBD](#))
- “Number of Warmups Since DTCs Cleared” shall be identical to PID 0x30, except the maximum value is 250 (all values above 250 shall be reported as 250).
- The (Non-)Continuously Monitored Systems Enable/Completed status shall be reported according to SAE J1939-73 [14] chapter 5.7.26.3 to 5.7.26.5. The calculation shall be based on those events referencing the corresponding configuration parameter [DemEventOBDReadinessGroup](#). In case there is no reference by any event parameter it shall indicate disabled and complete. Otherwise the disable state shall be based on the readiness group disabled status according

to [SWS_Dem_00356], and the complete status shall be set to “monitor complete” (0) if all assigned event parameter have the TestNotCompletedSinceThisOperationCycle status bit set to zero (0); otherwise the status bit shall be set to “monitor not complete” (1).

](*RS_Diag_04112*)

7.10.6 Monitor Performance Ratio

For J1939 the In-Use-Monitor Performance Ratio (IUMPR) requires a reporting for each supported Applicable System Monitor only.

[SWS_Dem_00912] [The function `Dem_J1939DcmSetRatioFilter` shall reset an internal counter to the first valid SPN with DemRatioId defined to be used for the subsequent calls of `Dem_J1939DcmGetNextFilteredRatio`. Furthermore, it shall return the “Ignition Cycle Counter” according SAEJ193973 chapter 5.7.20.1, as well as “OBD Monitoring Conditions Encountered” according SAEJ193973 chapter 5.7.20.2 (CARB defines this as the general denominator).] (*RS_Diag_04112*)

[SWS_Dem_00913] [Each call of the function `Dem_J1939DcmGetNextFilteredRatio` shall skip to the next valid SPN within the event memory with `DemRatioId` defined.

- The events referenced by this SPN via `DemRatioId` shall be used to calculate the return values SPN (for “SPN of Applicable System Monitor”), Numerator (for “Applicable System Monitor Numerator”), and Denominator (for “Applicable System Monitor Denominator”). The return value shall be E_OK.
- In case the calculation needs to be interrupted due to internal implementations or limitations, the return value can be set to DEM_PENDING. The out parameter needs not to be valid in this case. The next call of `Dem_J1939DcmGetNextFilteredRatio` should continue after the interrupted element.
- In case no more SPNs are available, the function return value shall be DEM_NO SUCH ELEMENT. The out parameter needs not to be valid in this case.

](*RS_Diag_04113*)

7.11 Interaction with other Software Modules

7.11.1 Interaction with Software Components (SW-C)

In the AUTOSAR ECU architecture, the Diagnostic Event Manager implements an AUTOSAR Service. This means that the Dem module does not exclusively communicate with other BSW modules, but also with SWC via the RTE (refer to [Figure 5.1](#)).

From the viewpoint of the BSW “Cmodule” Dem, there are three kinds of dependencies between the Service and the AUTOSAR Software Components above the RTE:

- The application accesses the API (implemented as Cfunctions) of the Dem (by accessing the Dem Service Component).
- The application is optionally notified upon the outcome of requested asynchronous activity (via direct/indirect RTE API by the Dem).
- An initialization function of the SWC is invoked by the Dem.

These dependencies must be described in terms of the AUTOSAR metamodel, which will contribute to the SWC Description of the application component as well as to the Service Component Description of the Dem Service.

The service component description of the Dem Service will define the ports below the RTE. Each SWC, which uses the Dem Service, must contain respective ports in its own SWC description, which will be typed by the same (or compatible) interfaces and must be connected to the ports of the Dem, so that the RTE can be generated. Ids used in these Dem-ports are abstracted with portdefined arguments.

[SWS_Dem_00512] [The name of the Dem Service Component shall be “Dem”.] ([SRS_BSW_00300](#))

The callbacks to SWCs do not use the mechanism of the portdefined arguments. Instead, the Dem configuration mechanism must ensure that the callback is delivered to the configured port and invokes the correct operation at this port using an RTE (direct or indirect) API call. For example, the EventId must not be passed as the first argument of the operation, because the monitors (and other SW-Cs) do not cope with EventIds explicitly.

In contrast to that, there are some special SWCs, that need to handle event status-/data changes uniformly. These SWCs are notified by the Dem, which provides then also the EventId for the application, to be able, to request the respective data from the Dem. Therefore, general interfaces are provided (refer to [GeneralCallbackEventUdsStatusChanged](#), [GeneralDiagnosticInfo](#) and [CallbackEventUdsStatusChanged](#)), which shall only be used in the way, that the EventIds (given by the Dem) shall not be interpreted by SWCs in any way, as well as the EventId values (used by the SW-Cs to request the event-specific data) have always to be provided by the Dem. Here only a handthrough mechanism is allowed to be used by SWCs for EventIds.

In the current Autosar release, the RTE analyzes the complete calltree of triggered runnables. Therefore, some limitations in the Dem API are introduced to avoid function calls from BSW modules, which rely on callbacks to SWCs via RTE.

7.11.2 Interaction with Diagnostic Clients

The [Dem](#) module provides interfaces to diagnostic clients. A diagnostic client is a [BSW](#) module, which is related to processing diagnostic requests. The most common diagnostic client is the [Dcm](#). There are further used cases, where a diagnostic client is a [SW-C](#) interacting with the [Dem](#) via the [RTE](#) interfaces. A diagnostic client accesses the [Dem](#) module in order to delegate diagnostic services, which are related to the event memory.

For detailed description of the interface usage between [Dcm](#) and [Dem](#) consult the Dcm SWS document [9, SWS Dcm]. There, especially the handling of freeze frame data is described.

[SWS_Dem_00171] [If the [Dcm](#) has requested an unavailable [event memory](#) / [DTC](#) origin, the [Dem](#) module functions with the respective return value shall return [DEM_<...>_WRONG_DTCORIGIN.](#).] ([RS_Diag_04058](#))

[SWS_Dem_00172] [If the [Dcm](#) has requested a [DTC](#) that is not available at all or that is available but has a different [event memory](#) / [DTC](#) origin than the requested one, the [Dem](#) module functions with the respective return value shall return [DEM_<...>_WRONG_DTC.](#).] ()

[SWS_Dem_00828] [If the status of a [DTC](#) changes, the [Dem](#) shall call the configured [DemCallbackDTCStatusChanged](#) function] ()

The ClientID is also used to filter for specific contents (like UDS instances , J1939 nodes, OBD,...).

7.11.2.1 Parallel event memory access

There are multiple clients that can request access to the fault memory. To allow parallel access to the clients, the Dem uses the concept of a client ID. The client IDs are configured in the container DemClient. Each client which requests access to the fault memory of the Dem has an assigned unique client ID. Examples for these clients are:

- Parallel OBD and UDS communication, where each protocol is handled by an own Dcm client
- Multiple Dcm instances in virtual ECUs, where Dcm instances are independent from each other
- SWCs or complex device driver, as proxy in OBD systems for secondary ECUs
- Clearing DTC by different clients

The Dem supports the client id as parameter ‘ClientId’ in various APIs to:

- Access fault memory information
- Read event related data

- Clear DTC and fault memory
- Control fault memory behavior

[SWS_Dem_01251] [The `Dem` shall ensure that clients with a different client Id can call all `APIs` with ‘ClientId’ as parameter in parallel. An `API` call from one client shall be processed independently from calls of the same `API` from a client with a different ID. E.g. if one client is setting a filter to iterate over extended data records, another client can set a different filter and iterate the extended data records.] (*RS_Diag_04162*)

[SWS_Dem_01252] [The `Dem` shall accept in all `APIs` with ‘ClientId’ as parameter only a ClientId value matching to any of the configured `DemClientId`. If a not configured ClientId value is passed, the `Dem` shall report the `Det` error `DEM_E_WRONG_CONFIGURATION.`] (*RS_Diag_04162*)

Note: A client is a BSW/SW-C module or a CDD that is processing diagnostic requests or is used to support a distributed diagnostic environment such as events from a secondary ECU that are handled on a primary ECU. The client id concept is explicitly not designed to provide any arbitrary BSW module access to the fault memory, especially if the modules purpose is different than processing diagnostic requests. The design focuses on Dcm for OBD and UDS processing, as well as remote event communication modules for distributed OBD systems.

For each `DemClient` with the parameter `DemClientUsesRte` set to TRUE, the `Dem` will provide the C/S interfaces `ClearDTC` and `EvMemOverflowIndication`.

7.11.2.2 Accessing diagnostic fault memory

The `Dem` provides a range of `APIs` controlling and accessing `event memory` and its behavior or configuration and states. Many of those `APIs` follow a ‘select and request’ mechanism. Initially a client selects a `DTC` or a group of DTCs and then calls `APIs` working on the active selection. A selection is client local and remains until a new selection is made.

[SWS_Dem_01253] [If the API `Dem_SelectDTC` is called, the `Dem` shall use the selected `DTC` or group of DTC in the requested `DTCOrigin` and `DTCFormat` as target for the following API calls:

- `Dem_ClearDTC`
- `Dem_DisableDTCRecordUpdate`
- `Dem_GetDTCSelectionResultForClearDTC`
- `Dem_GetDTCSelectionResult`
- `Dem_GetFunctionalUnitOfDTC`
- `Dem_GetSeverityOfDTC`
- `Dem_GetStatusOfDTC`

- Dem_SelectFreezeFrameData
- Dem_SelectExtendedDataRecord
- Dem_SetDTCSuppression
- Dem_GetDTCSuppression.

]()

[SWS_Dem_01306] Behavior if one client calling Dem_SelectDTC before the previous operation finished [If Dem_SelectDTC is called by one client and the same client is calling Dem_SelectDTC again and the Dem is currently still processing the previous operation based on Dem_SelectDTC according to [SWS_Dem_01253], the Dem shall return DEM_BUSY.]()

[SWS_Dem_01305] Behavior if one client starting a new operation while the previous one is still running [In case any of the Dem_SelectDTC related APIs according to [SWS_Dem_01253] is called by one client and the same client has already started another Dem_SelectDTC related operation according to [SWS_Dem_01253] and this different operation is not completed, the Dem shall return DEM_BUSY.]()

[SWS_Dem_01304] Life cycle of Dem_Select dependent operations [The Dem shall consider an operation based on Dem_SelectDTC according to [SWS_Dem_01253] to be finished independently if the client has requested the E_OK result from the Dem or not.]()

A client calling Dem_SelectDTC while another operation of the same client is still running, would indicate that the client is no longer interested in the result of the running operation. The result can be dropped and new select can be processed after Dem is ready.

[SWS_Dem_01198] [For addressing all DTCs, the Dem shall provide the symbol DEM_DTC_GROUP_ALL_DTCs which is selecting all configured DTCs (representation is 0xFFFFFFF).]()

[SWS_Dem_01254] [The API Dem_SelectDTC triggers the Dem internal DTC selection process on the event memory assigned to the ClientId. The result of the selection shall be reflected in the return value of the API calls following the Dem_SelectDTC call, see [SWS_Dem_01253].]()

Note: The behaviour of Dem_SelectDTC depending APIs with calling Dem_SelectDTC is described in [SWS_Dem_01299].

Note: The Dem_SelectDTC selects internally a DTC or group of DTC. In case a client is interested only in the result of the selection without a further action behind, the API Dem_GetDTCSelectionResult can be used. One use case of this API is the NRC handling for the UDS service 0x14 ClearDTC. The Dcm needs to perform further NRC relevant verifications between selecting and deleting the DTC.

[SWS_Dem_01261] API Behaviour on undefined DTC or format [If any of the APIs requiring a `Dem_SelectDTC` according to [SWS_Dem_01253] is called while the selection with `Dem_SelectDTC` is invalid, then the `Dem` shall return `DEM_WRONG_DTC`. A selection is invalid in case the provided `DTC` does not specify a valid `DTC` or `GroupOfDTCs` in the corresponding `DTCFormat`. The selection also is invalid, if `Dem_SelectDTC` was not called before.] ([SRS_BSW_00369](#))

[SWS_Dem_01299] API behavior without selected DTC [If any of the APIs requiring a `Dem_SelectDTC` according to [SWS_Dem_01253] is called without a prior call of `Dem_SelectDTC` for this client, the `Dem` shall report the `Det DEM_E_WRONG_CONDITION`.] ([SRS_BSW_00369](#))

[SWS_Dem_01262] API Behaviour on undefined DTCOrigin [If any of the APIs requiring a `Dem_SelectDTC` (see [SWS_Dem_01253]) is called on a not existing selected `DTCOrigin`, the `Dem` shall return `DEM_WRONG_DTCORIGIN` on this `API`.] ()

[SWS_Dem_01256] [The API `Dem_GetDTCSelectionResult` shall return `E_OK`, if the selection of `Dem_SelectDTC` was successful and the DTC or group of DTC are ready for further processing.] ()

Note: The call of `Dem_GetDTCSelectionResult` after a `Dem_SelectDTC` is optional. APIs depending on `Dem_SelectDTC` have the same behaviour with or without a call of `Dem_GetDTCSelectionResult`.

[SWS_Dem_01257] [If the API `Dem_GetDTCSelectionResult` is called and the DTC or group of DTC from `Dem_SelectDTC` is invalid, the `Dem` shall return `DEM_WRONG_DTC`.] ()

[SWS_Dem_01258] [If the API `Dem_GetDTCSelectionResult` is called and the Origin provided to `Dem_SelectDTC` is invalid, the `Dem` shall return `DEM_WRONG_DTCORIGIN`.] ()

[SWS_Dem_01296] Definition of Dem_GetDTCSelectionResultForClearDTC functionality [The API `Dem_GetDTCSelectionResultForClearDTC` shall behave exactly as `Dem_GetDTCSelectionResult` with the only difference that, `DEM_WRONG_DTC` is returned in case of a single `DTC` was selected and `Dem_ClearDTCLimitation` is set to `DEM_ONLY_CLEAR_ALL_DTCs` for that client.] ()

7.11.2.3 Access DTCs and Status Information

The following chapter defines the APIs, which shall be used to access the number of DTCs, and DTCs matching specific filter criteria and the associated status information.

[SWS_Dem_00231] [The API `Dem_GetTranslationType` shall return the translation format of the `DemEventMemorySet` configured in `DemTypeOfDTCSupported`.] ([RS_Diag_04201](#))

[SWS_Dem_00060] [The function `Dem_GetDTCStatusAvailabilityMask` shall set the out parameter `DTCStatusMask` to the value configured in `DemDtcStatusAvailabilityMask` of the `DemEventMemorySet` for the assigned client ID.] (*RS_Diag_04067*)

[SWS_Dem_01342] [If the function `Dem_GetDTCStatusAvailabilityMask` is called with a `DTCOrigin` different to `DEM_DTC_ORIGIN_PRIMARY_MEMORY` or `DEM_DTC_ORIGIN_USERDEFINED_MEMORY_<Name>`, the `Dem` shall report the development error `DEM_E_PARAM_DATA`.] (*RS_Diag_04067*)

[SWS_Dem_01181] [The Dem module shall be able to return the DTC severity availability mask (refer to `Dem_GetDTCSeverityAvailabilityMask`) in accordance to ISO 14229-1 [1].] ()

[SWS_Dem_01182] [The function `Dem_GetDTCSeverityAvailabilityMask` shall calculate the DTC severity availability mask in accordance to ISO 14229-1 [1] from the severity configuration of each supported DTC.] ()

[SWS_Dem_00657] [The Dem module shall mask all DTC status bytes (API parameters `DTCStatus`) provided to the Dcm with the DTC status availability mask (by performing a bit-wise AND operation).] ()

[SWS_Dem_00059] [The function `Dem_GetStatusOfDTC` shall copy the status of the selected `DTC` to the parameter `DTCStatus`. The `DTCStatus` format is according to ISO-14229-1[2].] (*RS_Diag_04067*)

[SWS_Dem_01259] [If the API `Dem_GetStatusOfDTC` is called on a selected `DTC` that does not exist in the selected format or if the selected `DTC` is a group of DTC or no `DTC` was selected, the `Dem` shall return `DEM_WRONG_DTC`.] ()

[SWS_Dem_01260] [If the API `Dem_GetStatusOfDTC` is called on a not existing selected `DTCOrigin`, the `Dem` shall return `DEM_WRONG_DTCORIGIN`.] ()

[SWS_Dem_01275] [If the API `Dem_GetStatusOfDTC` is called on a selected `DTC` that does not have an assigned `DTC` status, the `Dem` shall return `DEM_NO_SUCH_ELEMENT`.] ()

Note: In mirror event memory the DTCs does not necessarily have a status assigned.

It is possible, that a `DTC` with different states exists depending on the location. If the mirror memory is used as a kind of protocol stack that gives information which services have been performed on the primary memory, different `DTC` states might appear (e.g. DTC has been deleted from the primary memory and is written to the mirror memory with its latest status).

[SWS_Dem_00057] [The function `Dem_SetDTCFilter` shall set the filter criteria for the client with the same client ID for subsequent calls of::

- `Dem_GetNumberOfFilteredDTC`
- `Dem_GetNextFilteredDTC`

- `Dem_GetNextFilteredDTCAndFDC`
- `Dem_GetNextFilteredDTCAndSeverity`.

The filter criteria attributes shall be used until the next call of `Dem_SetDTCFilter` or `Dem` initialization.] ([RS_Diag_04057](#))

Note: Calls to `Dem_SetDTCFilter` with different ClientID can be called in parallel (see [[SWS_Dem_01251](#)]) without interfering each other. This way multiple clients can access the fault memory data in parallel.

In figure 7.48 a situation is shown, where two clients (e.g. an Dcm for OBD and an Dcm for UDS) are reading the number of filtered DTCs in parallel.

Figure 7.48: Multiple clients requesting event memory information in parallel

[SWS_Dem_01300] API behavior without set DTC filter [If any of the APIs requiring a `Dem_SetDTCFilter` according to [[SWS_Dem_00057](#)] is called without a prior call of `Dem_SetDTCFilter` for this client, the `Dem` shall report the Det DEM_E_WRONG_CONDITION.] ([SRS_BSW_00369](#))

[SWS_Dem_01264] [IF `Dem_SetDTCFilter` is called with an invalid `DTCOrigin`, the `Dem` shall return `E_NOT_OK`.] ()

[SWS_Dem_01265] [IF `Dem_SetDTCFilter` is called with an invalid `DTCFormat`, the `Dem` shall return `E_NOT_OK`.] ()

[SWS_Dem_01266] [In case of calling any subsequent function of `Dem_SetDTCFilter` (see [[SWS_Dem_00057](#)]) after the initial `Dem_SetDTCFilter` did not return `E_OK`, the `Dem` shall return `E_NOT_OK` on this subsequent function call.] ()

[SWS_Dem_01263] 「A call of `Dem_SetDTCFilter` sets the requested filter on the event memory assigned to ClientID of the call.」([RS_Diag_04162](#))

[SWS_Dem_00649] 「Each call of `Dem_SetDTCFilter` shall lead to a reset of the sequence for that client.」([RS_Diag_04057](#))

[SWS_Dem_01058] 「The function `Dem_SetDTCFilter` shall ignore unsupported bits (refer to configuration parameter `DemDtcStatusAvailabilityMask`) retrieved in `DTCStatusMask`.」()

The parameter `DTCFormat` of `Dem_SetDTCFilter` is relevant to decide about specific protocol characteristics like `OBD` vs. `UDS` vs. `J1939`. The `DTCOrigin` only references the fault memory location.

[SWS_Dem_01066] 「The `Det` error `DEM_E_WRONG_CONFIGURATION` shall be reported if the function `Dem_SetDTCFilter` is called with a value of the parameter `DTCFormat` that is not supported per configuration (e.g. if `DTCFormat` = `DEM_DTC_FORMAT_OBD` is passed, but `OBD` is not supported per configuration).」([RS_Diag_04057](#))

[SWS_Dem_01067] 「The `Det` error `DEM_E_WRONG_CONFIGURATION` shall be reported if the function `Dem_SetDTCFilter` is called with a value of the parameter `DTCOrigin` that is not supported per configuration (e.g. if `DTCOrigin` "DEM_DTC_ORIGIN_MIRROR_MEMORY" is passed, but no mirror memory is configured).」()

[SWS_Dem_00061] 「The function `Dem_GetNumberOfFilteredDTC` shall get the number of DTCs matching the filter criteria defined by the function call of `Dem_SetDTCFilter` [\[SWS_Dem_00057\]](#).」()

Note: The behaviour of `Dem_SetDTCFilter` depending APIs with calling `Dem_SetDTCFilter` is described in [\[SWS_Dem_01300\]](#).

[SWS_Dem_00216] 「With each call to the function `Dem_GetNextFilteredDTC` the Dem module shall return the next DTC and its associated status matching the filter criteria defined by the function call of `Dem_SetDTCFilter` [\[SWS_Dem_00057\]](#).」()

The `Dcm` calls the function `Dem_GetNextFilteredDTC` continuously until the return value of the function is `DEM_NO SUCH ELEMENT`, to receive all DTCs matching the filter criteria.

[SWS_Dem_00653] 「

The API `Dem_GetNextFilteredDTC` shall not return the value `DEM_PENDING` when `DTCFormat` = `DEM_DTC_FORMAT_OBD` (indicating emission-related services).」()

Rationale: The API `Dem_GetNextFilteredDTC` is used for UDS service 0x19 as well as OBD services \$03/\$07/\$0A (refer to [\[SWS_Dem_00301\]](#)). UDS service 0x19 is allowed to respond with NRC 0x78 (response pending) to the tester, while the OBD services are not.

[SWS_Dem_00228] 「With each call to the function `Dem_GetNextFilteredDTCAndFDC` the Dem module shall return the next DTC and its associated fault detection

counter (FDC, refer to [SWS_Dem_00264]) matching the filter criteria defined by the function call `Dem_SetDTCFilter` (refer to [SWS_Dem_00057]).] ()

[SWS_Dem_00513] [If the callback-function `Dem_GetFaultDetectionCounter` returns other than E_OK or is not configured for a DTC filtered by `Dem_GetNextFilteredDTCAndFDC`, this FDC value shall be returned as 0.] ()

The Dcm calls the function `Dem_GetNextFilteredDTCAndFDC` continuously until the return value of the function is DEM_NO SUCH ELEMENT, to receive all DTCs matching the filter criteria.

Note: Non-Dem-internal calculated fault detection counters are typically requested from SWCs through the RTE. To indicate an equivalent calltree for these runnables, a workaround is used: The Dcm main function specifies a trigger to the Dem interface GeneralEvtInfo (operation GetFaultDetectionCounter), which triggers the respective runnable (refer to RunnableEntity `Dem_GetFaultDetectionCounter`).

[SWS_Dem_00287] [With each call to the function `Dem_GetNextFilteredDTCAndSeverity` the Dem module shall return the next DTC and its associated fault severity matching the filter criteria defined by the function call `Dem_SetDTCFilter` (refer to [SWS_Dem_00057]).] ()

The Dcm calls the function `Dem_GetNextFilteredDTCAndSeverity` continuously until the return value of the function is DEM_NO SUCH ELEMENT, to receive all DTCs matching the filter criteria.

For information about the functions `Dem_GetSeverityOfDTC` and `Dem_GetFunctionalUnitOfDTC`, refer to chapter 7.4.

[SWS_Dem_00595] [The function `Dem_SetFreezeFrameRecordFilter` shall set the static filter criteria attribute “all freeze frame records currently stored in the event memory” to be used for the subsequent calls of `Dem_GetNextFilteredRecord` and `Dem_GetNumberOfFreezeFrameRecords`. This filter always belongs to primary memory.] ()

[SWS_Dem_00650] [The filter criteria attributes of `Dem_SetFreezeFrameRecordFilter` shall be used until the next call of `Dem_SetFreezeFrameRecordFilter` or Dem initialization. Each call of `Dem_SetFreezeFrameRecordFilter` shall lead to a reset of the sequence iterating over freezeframes.] (*RS_Diag_04204*)

[SWS_Dem_01312] [`Dem_GetNumberOfFreezeFrameRecords` shall retrieve the number of freeze frame records in primary memory that match the current filter.] (*RS_Diag_04205*)

[SWS_Dem_01313] API behavior without set DTC filter [If any of the APIs requiring a `Dem_SetFreezeFrameRecordFilter` is called without a prior call of `Dem_SetFreezeFrameRecordFilter` for this client, the Dem shall report the Det DEM_E_WRONG_CONDITION.] (*SRS_BSW_00369*)

[SWS_Dem_00225] [With each call to the function `Dem_GetNextFilteredRecord` the `Dem` module shall return the next `DTC` and its associated relative addressed freeze frame record numbers matching the filter criteria defined by the function call `Dem_SetFreezeFrameRecordFilter.`.]()

The client calls the function `Dem_GetNextFilteredRecord` continuously until the return value of the function is `DEM_NO SUCH ELEMENT`, to receive all records matching the filter criteria.

[SWS_Dem_00219] [The function `Dem_GetDTCByOccurrenceTime` shall provide the capability to get one `DTC` stored in the primary event memory of the addressed `DemEventMemorySet` according to the API parameter `DTCRequest.`.] (*RS_Diag_04195*)

[SWS_Dem_00221] [The API `Dem_GetDTCByOccurrenceTime` shall return `DEM_NO SUCH ELEMENT`, if no `DTC` is matching the requested occurrence time in the parameter `DTCRequest.`.] (*RS_Diag_04195*)

7.11.2.4 Access event related data

This section defines the APIs, to get access to the event related data (refer to chapter 7.7.7.1 and chapter 7.7.7.3) stored with the DTCs in the `event memory` of the `Dem` via diagnostics. Furthermore, access to WWH-OBD relevant PIDs stored in a freeze frame is made available. Details concerning freeze frame handling can be found in ISO-14229-1[2] and ISO 27145-3[21].

Example for the mapping of a PID to a DID: PID \$04 → DID 0xF404

Note: The data returned include the `DTCSnapshotRecordNumberOfIdentifiers` (Num of DIDs) as defined by ISO-14229-1[2] for the response message to service 0x19 0x05.

[SWS_Dem_01268] [If the API `Dem_SelectFreezeFrameData` is called, the `Dem` shall use the `DTC` selected by `Dem_SelectDTC` and the `RecordNumber` as a target for the following API calls:

- `Dem_GetNextFreezeFrameData`
- `Dem.GetSizeOfFreezeFrameSelection`

]()

[SWS_Dem_01269] [The API `Dem_SelectFreezeFrameData` triggers the `Dem` internal Freeze Frame selection process on the event memory assigned to the `ClientId`. The `Dem` shall provide the result of the selection process in the return value of the API calls following the `Dem_SelectFreezeFrameData` call, see [SWS_Dem_01268].]()

[SWS_Dem_01270] [If any of the APIs requiring a `Dem_SelectFreezeFrameData` (see [SWS_Dem_01268]) are called without a prior call to `Dem_SelectFreezeFrameData`, the `Dem` shall report the `Det` error `DET_E_WRONG_CONDITION.`.] (*SRS_BSW_00369*)

[SWS_Dem_01271] [If any of the APIs requiring a `Dem_SelectFreezeFrameData` is called without a prior call to `Dem_SelectFreezeFrameData`, the `Dem` shall report the `Det` error `DEM_E_WRONG_CONDITION`.] (*SRS_BSW_00369*)

[SWS_Dem_00071] [The function `Dem_GetNextFreezeFrameData` shall copy the specific data identifiers (DIDs) of the freezeframe record selected by the API `Dem_SelectFreezeFrameData` for the specified ClientId to the destination buffer provided by the `DestBuffer` parameter. The `Dem` shall transmit these data as a complete record with the Buffer format.] ()

For Buffer format see figure 7.49.

[SWS_Dem_00576] [If the RecordNumber selected by the API `Dem_SelectFreezeFrameData` is set to 0x00, `Dem_GetNextFreezeFrameData` shall provide the event/DTC specific WWH-OBD equivalent freeze frame record.] ()

Note: Retrieving record 0x00 with `Dem_SelectFreezeFrameData` and `Dem_GetNextFreezeFrameData` is only supported if the `Dem` module supports WWH-OBD (refer to `DemOBDSupport`)

Figure 7.49: Buffer format used by `Dem_GetNextFreezeFrameData`

Note: The data returned include the DTCsnapshotRecordNumber (RecordNum) and DTCsnapshotRecordNumberofIdentifiers (Num of DIDs) as defined by ISO-14229-1[2] for the response message to service 0x19 0x04. In contradiction to the Dcm PIDstructure handling, the DIDstructure is handled within the Dem module. Therefore, the Dem returns already full freeze frame records according to the response layout. This results in an optimized Dem/Dcm interface.

[SWS_Dem_00630] [If a single DTC is selected and the API `Dem_SelectFreezeFrameData` is called with a valid `RecordNumber` which is not stored, `Dem_GetNextFreezeFrameData` shall return `E_OK` and `BufSize` 0 (empty buffer).] ()

[SWS_Dem_00074] [The function `Dem.GetSizeOfFreezeFrameSelection` shall return the size of the requested freeze frame record(s) by `Dem_SelectFreezeFrameData` for the specified ClientId, which represents the number of user data bytes, including any freeze frame headerinformation (according to the format defined in [SWS_Dem_00071]).] (*RS_Diag_04204*)

Note: If the record number value 0xFF is requested, the Dem considers the size of all stored freeze frame records according to [SWS_Dem_00074].

[SWS_Dem_01348] Select freeze frame data for single DTCs only [In case the function `Dem_SelectFreezeFrameData` is called and the DTC selected by `Dem_SelectDTC` is not a single DTC but a group of DTC, the `Dem` shall return `DEM_WRONG_DTC`.](*RS_Diag_04244*)

[SWS_Dem_01349] Select extended data record for single DTCs only [In case the function `Dem_SelectExtendedDataRecord` is called and the DTC selected by `Dem_SelectDTC` is not a single DTC but a group of DTC, the `Dem` shall return `DEM_WRONG_DTC`.](*RS_Diag_04245*)

[SWS_Dem_01272] [If the API `Dem_SelectExtendedDataRecord` is called, the `Dem` shall use the DTC selected by `Dem_SelectDTC` and the `ExtendedDataNumber` as a target for the following API calls:

- `Dem_GetNextExtendedDataRecord`
- `Dem.GetSizeOfExtendedDataRecordSelection`

]()

[SWS_Dem_01273] [The API `Dem_SelectExtendedDataRecord` triggers the `Dem` internal extended data record selection process on the `event memory` assigned to the `ClientId`. The `Dem` shall provide the result of the selection process in the return value of the API calls following the `Dem_SelectExtendedDataRecord`, see [SWS_Dem_01272].]()

[SWS_Dem_01274] [If any of the APIs requiring a `Dem_SelectExtendedDataRecord` (see [SWS_Dem_01272]) are called without a prior call to `Dem_SelectExtendedDataRecord`, the `Dem` shall report the `Det` error `DEM_E_WRONG_CONDITION`.](*SRS_BSW_00369*)

[SWS_Dem_00075] [The API `Dem_GetNextExtendedDataRecord` shall copy the complete data of the requested extended data record by `Dem_SelectExtendedDataRecord` API for the specified `ClientId` to the destination buffer (`DestBuffer`). The function shall transmit these data as a complete record with the `Buffer` format. The extended data record number is placed as the first byte in the copied data.]()

For Buffer format see figure 7.50.

Figure 7.50: Buffer format used by Dem_GetNextExtendedDataRecord

[SWS_Dem_00631] [If the API `Dem_SelectExtendedDataRecord` is called with a valid DTC and a valid extended data record number which is not stored, the API shall return `E_OK` and `Dem_GetNextExtendedDataRecord` shall return `BufSize` 0 (empty buffer).]()

[SWS_Dem_00076] [The function `Dem.GetSizeOfExtendedDataRecordSelection` shall return the size of the requested extended data record(s) selected by `Dem_SelectExtendedDataRecord`, which represents the number of user data bytes stored in the extended data record, including any extended data record header-information (i.e. the extended data record number, different to the format defined in [SWS_Dem_00075]).]()

Note: If the record number value 0xFE is requested, the Dem considers the size of all OBD stored extended data records in the range of 0x90 to 0xEF according to [SWS_Dem_00076].

Note: If the record number value 0xFF is requested, the Dem considers the size of all stored extended data records (in the range of 0x01 to 0xEF) according to [SWS_Dem_00076].

The Dcm uses the function `Dem_DisableDTCRecordUpdate`, if the freeze frame or extended data of a specific DTC is about to be accessed by subsequent API calls. This is done to ensure, that the requested data of this DTC are not changed while the Dcm accesses those by several APIcalls.

[SWS_Dem_00270] [The function `Dem_DisableDTCRecordUpdate` shall protect the event related data of the selected DTC within the selected DTCOrigin from updating or deleting, to allow a consistent read for the following subsequent APIcalls:

- `Dem_SelectFreezeFrameData`
`Dem.GetSizeOfFreezeFrameSelection` and
`Dem_GetNextFreezeFrameData`
- `Dem_SelectExtendedDataRecord`
`Dem.GetSizeOfExtendedDataRecordSelection` and
`Dem_GetNextExtendedDataRecord`.

]()

New and other events including their associated freeze frames and extended data records can still be added to and changed in the `event memory` as long as space is available.

Note: Event related data might still be updated in background (e.g. Dem-internal data elements).

Note: The function `Dem_DisableDTCRecordUpdate` does not affect the UDS status information update.

[SWS_Dem_00271] [The function `Dem_EnableDTCRecordUpdate` shall release the currently disabled DTC which has been protected by the function `Dem_DisableDTCRecordUpdate`, so that the data can be updated again.]()

The function `Dem_EnableDTCRecordUpdate` is the counterpart to the function `Dem_DisableDTCRecordUpdate`.

The Dcm calls the function `Dem_EnableDTCRecordUpdate` after the freeze frame and extended data of the specific DTC were protected by the function `Dem_DisableDTCRecordUpdate`, after the access by subsequent APIcalls is finished.

[SWS_Dem_00648] [If development error detection is enabled and the function `Dem_DisableDTCRecordUpdate` is called while another DTC is locked by the same client, the Dem module shall report the Det `DEM_E_WRONG_CONDITION`.]()

7.11.2.5 Clear diagnostic information

The `Dem` provides the functionality to clear DTCs to the `Dcm` and other diagnostic clients. The general DTC clearing process is described in chapter 7.7.2.2.

7.11.2.6 Control DTC setting

[SWS_Dem_01290] **DTCs affected by `Dem_DisableDTCSetting` and `Dem_EnableDTCSetting`** [Calls of the APIs `Dem_DisableDTCSetting` and `Dem_EnableDTCSetting` have effect on all events and UDS status bytes assigned the `DemEventMemorySet` referenced by the clientId of the call. DTCs not referenced from this `DemEventMemorySet` are not affected.]()

[SWS_Dem_00079] [If the function `Dem_DisableDTCSetting` is called, the `Dem` shall disable the storage of corresponding events and UDS status byte updates.]()

The function `Dem_DisableDTCSetting` is used in case of an induced failure situation in a system, e.g. during flashreprogramming of one ECU in a network. In that case all the ECUs are commanded via diagnostic request (forwarded from Dcm by using `Dem_DisableDTCSetting` / `Dem_EnableDTCSetting`) to ignore DTC reports, as the flashed ECU is not participating in the normal communication anymore.

Note: If one of the other networked ECUs needs one of the signals, which are now missing, for this case a failsafereaction of the ECU cannot be assigned to the UDS status byte updates, as these are also suppressed during disabled DTC setting.

[SWS_Dem_00080] [If the function `Dem_EnableDTCSetting` is called, the `Dem` shall enable the storage of corresponding events and UDS status byte.](*(RS_Diag_04115)*)

[SWS_Dem_00626] [When DTC setting is disabled, all status reports from the API `Dem_SetEventStatus` and `Dem_SetEventFailedWithSyncFreezeFrame` for the related events shall be ignored (no change of UDS status byte) by the Dem.] (*(RS_Diag_04115)*)

Note: This is similar like the enable condition handling (refer to [SWS_Dem_00449]). It has no impact on `Dem_ResetEventDebounceStatus`, `Dem_ResetEventStatus` and `Dem_ClearDTC`. In case of Dem-internal debouncing the related fault detection counter will be frozen or reset (refer to chapter Figure 7.31 and Figure 7.34).

7.11.2.7 Asynchronous Dcm operations

Most of the APIs of the Dem/Dcm interface depend on NVRAM data. Therefore, an asynchronous processing of these APIs is realized by using the additional “DEM_PENDING” return value.

7.11.3 Interaction with J1939 Diagnostic Manager (J1939)

[SWS_Dem_00971] [In case the TestFailed bit of an event within an primary event memory changes and a J1939 DTC number is assigned to that event, the function `J1939Dcm_DemTriggerOnDTCStatus` shall be called for each `DemClient` referencing this `DemEventMemorySet`.] (*RS_Diag_04112*)

7.11.4 Interaction with Function Inhibition Manager (FiM)

The purpose of the Function Inhibition Manager is to control (enable/disable) function entities within software components based on inhibit conditions such as detected errors. The Dem contribution to this functionality is to provide the monitoring status change and the `DemComponent` information to the FiM.

[SWS_Dem_00029] [If `DemTriggerFiMReports` is set to True, the Dem module shall notify the FiM module (refer to [8]) on each change of the monitoring status (refer also to [SWS_Dem_00016]), by calling the function `FiM_DemTriggerOnEventStatus` (with same syntax as `<Module>_DemTriggerOnMonitorStatus`) in the context of `Dem_SetEventStatus`.] (*RS_Diag_04031*)

The Fim uses the function `Dem_GetMonitorStatus` for possible plausibility checks, rebuilding, etc. of inhibition relations.

[SWS_Dem_01325] [The Dem shall call `FiM_DemInit` after the monitor and component states have been initialized.] (*RS_Diag_04031*)

[SWS_Dem_01189] [If `DemTriggerFiMReports` is set to True, the Dem shall call `FiM_DemInit` during `Dem_Init` to trigger the initialization of the permissions inside the Fim (independent of trigger or polling mode). The `FiM_DemInit` shall not be called at any other point in time.] (*RS_Diag_04031*)

7.11.5 Interaction with NVRAM Manager (NvM)

Typically, the Dem module uses nonvolatile memory blocks (configurable in size by the NVRAM Manager [5]) to achieve permanent storage of UDS status information, event related data and required internal states (e.g. retrieve status at startup). Each nonvolatile memory block used from the Dem, needs also to be configured (refer to DemNvRamBlockId). The number, the type, and the content of the used nonvolatile memory blocks are not prescribed. These shall be handled implementation specific. The NvM usage can also be deactivated by configuration (refer to multiplicity of DemNvRamBlockId), so that the Dem will work based on RAM only.

[SWS_Dem_00339] [The Dem module shall verify the validity (which relates to block states), integrity (which relates to CRC results), and for general NvM-reading errors of its nonvolatile blocks (before using the respective data).] ([RS_Diag_04107](#))

Usually this verification is done in the API `Dem_Init` by using `NvM_GetErrorStatus` for these blocks, which are read by the ECU State Manager (refer to API `NvM_ReadAll`).

Note: For the non-volatile data of the Dem module, it is recommended to configure a CRC in the NvM.

[SWS_Dem_00578] [If the NVM module was not able to read some nonvolatile data of the Dem module, the Dem module shall initialize all non-volatile data with their initial values.] ([SRS_Mem_08549](#))

Note: To avoid inconsistencies between readable blocks and erroneous blocks, all nonvolatile data are initialized. The initialization is done to allow the fault detection mechanism of the NvM module, to report the respective reading error(s) to the Dem module (refer to `Dem_SetEventStatus`). These errors denote the defective NVRAM.

[SWS_Dem_00340] [After the API `Dem_Init` has finished, the Dem shall be fully operational.] ([SRS_BSW_00101](#))

[SWS_Dem_01237] [If a DTC is reported as failed (UDS status testfailed flag changes from 0->1) and gets newly stored to the event memory (no entry existed for this DTC) and this DTC is configured with `DemNvStorageStrategy = IMMEDIATE_AT_FIRST_OCCURRENCE`, the Dem shall trigger the immediate storage to NvM.] ([RS_Diag_04077](#))

[SWS_Dem_01238] [If a DTC is configured with `DemNvStorageStrategy = DURING_SHUTDOWN`, any change of its data (DTC, UDS status, event memory entry) shall only be stored to NvM during shutdown.] ([RS_Diag_04077](#))

[SWS_Dem_00551] [If immediate nonvolatile storage is enabled for a specific DTC, the Dem module shall trigger the storage for new `event memory entries` and after every change of the event related data (`event memory entry` was updated).] ([RS_Diag_04077](#))

Note: For `event memory entries`, which are stored immediately, it is necessary to ensure data consistency (e.g. with the `UDS status byte`) during `Dem_Init`.

Note: If the immediate nonvolatile storage is disabled, the [event memory entry](#) and its event related data are stored persistently during the shutdown phase (refer to [\[SWS_Dem_00102\]](#), [\[SWS_Dem_00341\]](#) and the note below).

Note: Write operations to NVRAM will perform in any case at ECU shutdown.

[SWS_Dem_00102] [The API [Dem_Shutdown](#) shall finalize all pending operations in the Dem module to prepare the internal states and data for transfer to the NVRAM. The [event memory](#) shall be locked and not modified until the API [Dem_Init](#) is recalled.] ([SRS_BSW_00336](#))

[SWS_Dem_00341] [For changed nonvolatile data, the Dem module shall trigger the storage to NVRAM before or during [Dem_Shutdown](#).] ([SRS_BSW_00336](#))

Based on the Dem configuration and implementation, the copying process to NVRAM of those Demrelated NvMblocks to be stored after [Dem_Shutdown](#), is performed by the API [NvM_WriteAll](#) called by the ECU State Manager.

If the ECU power supply is disconnected before the NvM has finished copying all data to NVRAM, these data will be incomplete/inconsistent or not stored. At next startup, the events of the last operating cycle could not be found anymore. Therefore, the NVRAM Manager configuration provides mechanisms for data consistency, like redundant data blocks.

[SWS_Dem_00164] [The Dem module shall use the APIs [NvM_WriteBlock](#) and [NvM_ReadBlock](#) of the NVRAM Manager, if there is the necessity to store and restore data between [Dem_Init](#) and [Dem_Shutdown](#).] ([RS_Diag_04077](#))

Note: The NvM module realizes a retry mechanism for block reading and writing. Therefore, the Dem module does not implement any retry mechanism for its nonvolatile blocks.

[SWS_Dem_00579] [If the NVM module was not able to write (some) nonvolatile data of the Dem module, the Dem module shall ignore the reported negative return values by the NvM.] ([SRS_BSW_00171](#))

Note: If writing of nonvolatile Dem data fails, the Dem module is not able to perform any adequate reaction.

7.11.6 Interaction with Default Error Tracer ([Det](#))

The interaction with the [Det](#) is described in chapter [7.13](#).

7.11.7 Required data by the Dem module

The Dem module requires different information for internal computation/processing. If this information is provided by SWCs (as provide-ports), they are described in the respective ServiceNeeds (diagnostic capabilities).

One kind of information required by the Dem module are event related data (represented by freeze frames and extended data records, refer to chapter [7.7.7](#)).

Note: For OBDrelevant ECUs, the Dem module could access (via the data element interface) on the following data values:

- engine temperature engine speed
- vehicle speed (refer to [\[SWS_Dem_00346\]](#), PID \$0D)
- distance information
- programming event
- ambient temperature
- ambient pressure
- accelerator pedal information

However, the list of data elements and their required size and resolution are implementation specific and will be configured in OBD and handled during integration process. For example, the vehicle speed, accelerator pedal information, ambient temperature, etc. are necessary to evaluate the cycle conditions of the IUMPR General Denominator. Similar inputs are necessary for the PID computation (e.g. the engine temperature for the computation of the WarmUp cycle or the WarmUp cycle condition itself). These variables are typically accessed through the RTE.

7.11.8 Scaling information on Service Interfaces

The SoftwareComponentTemplate [\[22\]](#) defines the meta-class SwDataDefProps which covers all properties of a particular data object under various aspects. This chapter describes two alternative workflows how the SwDataDefProps properties such as CompuMethod, DataConstraints and Units can be used within the Dem Service SWC and make them there available per [DemExternalSRDataElementClass](#).

[SWS_Dem_CONSTR_6117] [The aggregation of [DemTextTableMapping](#) at [DemAlternativeDataType](#) is only valid if the category of the CompuMethod of the DataType referenced by [DemApplicationDataType](#) has category set to TEXTTABLE or SCALE_LINEAR_AND_TEXTTABLE.]()

Work flow 1

This work flow is the use of a EcucForeignReference inside the generated EcuC values. While importing the DEXT [\[23\]](#) information the [DemDiagnosticDataElementRef](#) is derived and holds a EcucForeignReference to a DiagnosticDataElement in the DEXT [\[23\]](#) file. This EcucForeignReference enables the access to all SwDataDefProps (BaseTyoe, CompuMethod, DatConstr, etc.) of the corresponding DiagnosticDataElement. The container [DemAlternativeDiagnosticDataElement](#)

aggregates this EcucForeignReference. In the process step of generating the corresponding Service SWC all needed content will be copied directly based on the EcucForeignReference from DEXT [23] to the Service SWC. In this work flow the existence of the DEXT file while the generation of the Service SWC is required.

* The DEXT importer generates one SWC which contains all SwDataDefProps and the ECUC parameter (DemAlternativeDataType.DemApplicationDataType) refers to the SWC. Within the SWBuild processing this reference to SWC is taken and the required contents (CompuMethod / DataConstraints / Units) are included into the Dem SWCD.

Figure 7.51: Workflow 1

Work flow 2

This work flow is that while importing the DEXT [23] information beside the EcuC values also a SWC fragment is generated. In this SWC fragment all needed SwDataDefProps are directly copied from the DEXT [23] file. Inside the generated EcuC values the EcuC Parameter **DemApplicationDataType** refers to the SWC fragment and enables the access to all SwDataDefProps (BaseType, CompuMethod, DatConstr, etc.). In the process step of generating the corresponding Service SWC all needed content will be included based on the reference from **DemApplicationDataType** to the SWC fragment. In this work flow the existence of the DEXT [23] file while the generation of the Service SWC is not required.

* The DEXT importer generates one SWC which contains all SwDataDefProps and the ECUC parameter (DemAlternativeDataType.DemApplicationDataType) refers to the SWC. Within the SWBuild processing this reference to SWC is taken and the required contents (CompuMethod / DataConstraints / Units) are included into the Dem SWCD.

Figure 7.52: Workflow 2

7.12 Version check

For details refer to the chapter 5.1.8 “Version Check” in SWS_BSWGeneral.

7.13 Error classification

Section 7.13 "Error Handling" of the document "General Specification of Basic Software Modules" describes the error handling of the Basic Software in detail. Above all, it constitutes a classification scheme consisting of five error types which may occur in BSW modules.

Based on this foundation, the following section specifies particular errors arranged in the respective subsections below.

7.13.1 Development Errors

[SWS_Dem_00173] [

Type of error	Related error code	Error value
API function called with a parameter value, which is not allowed by active configuration	DEM_E_WRONG_CONFIGURATION	0x10
API function called with a NULL pointer	DEM_E_PARAM_POINTER	0x11
API function called with wrong parameter value	DEM_E_PARAM_DATA	0x12
API function called with wrong length parameter value	DEM_E_PARAM_LENGTH	0x13
Dem initialisation failed (refer to SWS_BSW_00151)	DEM_E_INIT_FAILED	0x14
API function called before the Dem module has been full initialized (refer to [SWS_Dem_00124],[SWS_Dem_00364]) or after the Dem module has been shut down (refer to [SWS_Dem_00368])	DEM_E_UNINIT	0x20
Required conditions for the respective API call are not fulfilled (e.g. an invalid status change was initiated, or a filter was not set correctly, etc. - refer to [SWS_Dem_00518]).	DEM_E_WRONG_CONDITION	0x40
Dem_DcmGetAvailableOBDMIDs called with invalid OBDMID.	DEM_E_INVALID_OBDMID	0x50

] (SWS_BSW_00050, SWS_BSW_00212)

[SWS_Dem_00124] [If `DemDevErrorDetect` is set to TRUE and any Dem API excluding :

- `Dem_SetEventStatus`
- `Dem_ResetEventStatus`
- `Dem_SetEventAvailable`
- `Dem_ResetEventDebounceStatus`
- `Dem_GetVersionInfo`
- `Dem_MainFunction`
- `Dem_SetEventFailedWithSyncFreezeFrame`

is called before `Dem` has been fully initialized, the `Dem` module shall set the error code `DEM_E_UNINIT`.] (SRS_BSW_00406)

Note: If development error detection is disabled and the Dem is not fully initialized, the behavior of the APIs is undefined.

[SWS_Dem_01324] [During `Dem_Init` the `Dem` initializes the monitor and component states. After this point in time, the `Dem` shall return `E_OK` on the APIs `Dem_GetMonitorStatus` and `Dem_GetComponentFailed`.] ()

[SWS_Dem_00364] [If development error detection is enabled and any instance calls `Dem_SetEventStatus` or `Dem_ResetEventDebounceStatus` before the Dem was

preinitialized, the Dem module shall set the error code DEM_E_UNINIT.] ([SRS_BSW_00406](#))

Note: If development error detection is disabled and the Dem is not preinitialized, the behavior of these APIs is undefined.

[SWS_Dem_00368] [If development error detection is enabled and any instance calls any Dem API, excluding `Dem_SetEventStatus`, `Dem_ResetEventDebounceStatus`, `Dem_GetVersionInfo` and `Dem_MainFunction`, after `Dem_Shutdown` has been called, the Dem module shall set the error code DEM_E_UNINIT until `Dem_Init` is called again.] ([SRS_BSW_00337](#))

Note: If development error detection is disabled and the Dem is shut down, the behavior of these APIs is undefined.

[SWS_Dem_00518] [If development error detection is enabled and a Dem function is called with required preconditions not fulfilled, the Dem module shall set the error code DEM_E_WRONG_CONDITION.] ([RS_Diag_04057](#))

Note: For example, `Dem_GetNextFilteredDTCAndFDC` is called, after `Dem_SetDTCFilter` with `FilterForFaultDetectionCounter = FALSE` was called.

7.13.2 Runtime Errors

[SWS_Dem_91035] [

Type of error	Related error code	Error value
The UDS status corresponding to a changed monitor status could not be processed.	DEM_E_UDS_STATUS_PROCESSING_FAILED	0x21
No valid data for data element available by SW-C or BSW call	DEM_E_NODATAAVAILABLE	0x30

] ()

7.13.3 Transient Faults

There are no transient faults.

7.13.4 Production Errors

There are no production errors.

7.13.5 Extended Production Errors

There are no extended production errors.

8 API specification

The figures below show the interfaces between Dem and its surrounding SW-Cs and BSW modules. The description of the interface shall give a simple overview of these relations.

Figure 8.1: Overview of interfaces between the Dem and other BSW modules

Figure 8.2: Overview of interfaces between the Dem and other BSW modules (in general)

Figure 8.3: Overview of interfaces between the Dem and Dcm

8.1 Imported Types

This section lists all types included from other modules.

[SWS_Dem_00176] ↗

<i>Module</i>	<i>Header File</i>	<i>Imported Type</i>
Dcm	Rte_Dcm_Type.h	Dcm_OpStatusType
NvM	Rte_NvM_Type.h	NvM_BlockIdType
	Rte_NvM_Type.h	NvM_RequestResultType
Std	Std_Types.h	Std_ReturnType
	Std_Types.h	Std_VersionInfoType

](SRS_BSW_00301)

8.2 Type definitions

The following Data Types shall be used for the functions defined in this specification.

8.2.1 Dem data types

8.2.1.1 Dem_ComponentIdType

[SWS_Dem_01114] ↗

<i>Name</i>	Dem_ComponentIdType		
<i>Kind</i>	Type		
<i>Derived from</i>	uint16		
<i>Range</i>	1..65535	–	Internal identifier of a monitored component. Remark: 0 is not a valid value
<i>Description</i>	Identification of a DemComponent by assigned ComponentId. The ComponentId is automatically assigned by the Dem.		
<i>Available via</i>	Dem.h		

]()

8.2.1.2 Dem_ConfigType

[SWS_Dem_00924] ↗

Name	Dem_ConfigType	
Kind	Structure	
Elements	implementation specific	
	Type	-
	Comment	-
Description	This type of the external data structure shall contain the post build initialization data for the Dem.	
Available via	Dem.h	

])

8.2.1.3 Dem_EventIdType

This data type is used in both, C-APIs and service interfaces. It's definition is available in chapter [8.6.1.8](#).

8.2.1.4 Dem_EventStatusType

This data type is used in both, C-APIs and service interfaces. It's definition is available in chapter [8.6.1.9](#).

8.2.1.5 Dem_DebouncingStateType

This data type is used in both, C-APIs and service interfaces. It's definition is available in chapter [8.6.1.5](#).

8.2.1.6 Dem_DebounceResetStatusType

This data type is used in both, C-APIs and service interfaces. It's definition is available in chapter [8.6.1.6](#).

8.2.1.7 Dem_UdsStatusByteType

This data type is used in both, C-APIs and service interfaces. It's definition is available in chapter [8.6.1.21](#).

8.2.1.8 Dem_IndicatorStatusType

This data type is used in both, C-APIs and service interfaces. It's definition is available in chapter [8.6.1.17](#).

8.2.1.9 Dem_MonitorDataType

This data type is used in both, C-APIs and service interfaces. Its definition is available in chapter [8.6.1.15](#).

8.2.1.10 Dem_MonitorStatusType

This data type is used in both, C-APIs and service interfaces. Its definition is available in chapter [8.6.1.16](#).

8.2.1.11 Dem_DTCKindType

[SWS_Dem_00932] [

Name	Dem_DTCKindType		
Kind	Type		
Derived from	uint8		
Range	DEM_DTC_KIND_ALL_DTCS	0x01	Select all DTCs
	DEM_DTC_KIND_EMISSION_REL_DTCS	0x02	Select OBD-relevant DTCs
Description	This type is used to filter DTCs for their kind.		
Available via	Dem_J1939Dcm.h		

] ([RS_Diag_04129](#))

8.2.1.12 Dem_DTCFormatType

This data type is used in both, C-APIs and service interfaces. Its definition is available in chapter [8.6.1.10](#).

8.2.1.13 Dem_DTCOriginType

This data type is used in both, C-APIs and service interfaces. Its definition is available in chapter [8.6.1.4](#).

8.2.1.14 Dem_DTCRequestType

[SWS_Dem_00935] [

Name	Dem_DTCRequestType		
Kind	Type		
Derived from	uint8		
Range	DEM_FIRST_FAILED_DTC	0x01	first failed DTC requested
	DEM_MOST_RECENT_FAILED_DTC	0x02	most recent failed DTC requested
	DEM_FIRST_DET_CONFIRMED_DTC	0x03	first detected confirmed DTC requested
	DEM_MOST_REC_DET_CONFIRMED_DTC	0x04	most recently detected confirmed DTC requested
Description	This type is used to request a DTC with specific attributes.		
Available via	Dem.h		

」(RS_Diag_04195)

8.2.1.15 Dem_DTCTranslationFormatType

[SWS_Dem_00936] 「

Name	Dem_DTCTranslationFormatType		
Kind	Type		
Derived from	uint8		
Range	DEM_DTC_TRANSLATION_ISO15031_6	0x00	ISO15031-6 DTC format/SAE J2012-DA_DTCFormat_00 DTC format
	DEM_DTC_TRANSLATION_ISO14229_1	0x01	ISO14229-1 DTC format
	DEM_DTC_TRANSLATION_SAEJ1939_73	0x02	SAEJ1939-73 DTC format
	DEM_DTC_TRANSLATION_ISO11992_4	0x03	ISO11992-4 DTC format
	DEM_DTC_TRANSLATION_J2012DA_FORMAT_04	0x04	SAE_J2012-DA_DTCFormat_04 DTC format
Description	DTC translation format as defined in ISO14229-1.

」(RS_Diag_04067)

8.2.1.16 Dem_DTCSeverityType

[SWS_Dem_00937] 「

Name	Dem_DTCSeverityType			
Kind	Bitfield			
Derived from	uint8			
Elements	Kind	Name	Mask	Description
	bit	DEM_SEVERITY_NO_SEVERITY	0x00	No severity information available
	bit	DEM_SEVERITY_WWHOBD_CLASS_NO_CLASS	0x01	No class information
	bit	DEM_SEVERITY_WWHOBD_CLASS_A	0x02	WWH-OBD Class A
	bit	DEM_SEVERITY_WWHOBD_CLASS_B1	0x04	WWH-OBD Class B1
	bit	DEM_SEVERITY_WWHOBD_CLASS_B2	0x08	WWH-OBD Class B2
	bit	DEM_SEVERITY_WWHOBD_CLASS_C	0x10	WWH-OBD Class C
	bit	DEM_SEVERITY_MAINTENANCE_ONLY	0x20	maintenance required
	bit	DEM_SEVERITY_CHECK_AT_NEXT_HALT	0x40	check at next halt
	bit	DEM_SEVERITY_CHECK_IMMEDIATELY	0x80	Check immediately
Description	Type definition of DTCSeverityMask / DTCSeverity byte containing the DTC severity and DTC class information according to ISO 14229-1 Annex D.3. The upper 3 bits (bit 7-5) are used to represent the DTC severity information. The lower 5 bits (bit 4-0) are used to represent the DTC class information.

8.3 Function definitions

This is a list of functions provided for upper layer modules.

8.3.1 Dem_GetVersionInfo

[SWS_Dem_00177] 「

Service Name	Dem_GetVersionInfo	
Syntax	<pre>void Dem_GetVersionInfo (Std_VersionInfoType* versioninfo)</pre>	
Service ID [hex]	0x00	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	None	
Parameters (inout)	None	
Parameters (out)	versioninfo	Pointer to where to store the version information of this module.
Return value	None	
Description	Returns the version information of this module. API Availability: This API will be available only if ({ecuc(Dem/DemGeneral.DemVersionInfoApi)} == true)	
Available via	Dem.h	

」(SRS_BSW_00402, SRS_BSW_00407)

8.3.2 Interface ECU State Manager <=> Dem

8.3.2.1 Dem_PreInit

[SWS_Dem_00179] [

Service Name	Dem_PreInit
Syntax	<pre>void Dem_PreInit (void)</pre>
Service ID [hex]	0x01
Sync/Async	Synchronous
Reentrancy	Non Reentrant
Parameters (in)	None
Parameters (inout)	None
Parameters (out)	None
Return value	None
Description	Initializes the internal states necessary to process events reported by BSW-modules.
Available via	Dem.h

]()

8.3.2.2 Dem_Init

[SWS_Dem_00181] [

Service Name	Dem_Init	
Syntax	<pre>void Dem_Init (const Dem_ConfigType* ConfigPtr)</pre>	
Service ID [hex]	0x02	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	ConfigPtr	Pointer to the configuration set in VARIANT-POST-BUILD.
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	Initializes or reinitializes this module.	
Available via	Dem.h	

] ([SRS_BSW_00101](#))

8.3.2.3 Dem_Shutdown

[SWS_Dem_00182] [

Service Name	Dem_Shutdown
Syntax	<pre>void Dem_Shutdown (void)</pre>
Service ID [hex]	0x03
Sync/Async	Synchronous
Reentrancy	Non Reentrant
Parameters (in)	None
Parameters (inout)	None
Parameters (out)	None
Return value	None
Description	Shuts down this module.
Available via	Dem.h

](SRS_BSW_00336)

8.3.3 Interface BSW modules / SW-Components <=> Dem

8.3.3.1 Dem_ClearDTC

[SWS_Dem_00665] [

Service Name	Dem_ClearDTC	
Syntax	<pre>Std_ReturnType Dem_ClearDTC (uint8 ClientId)</pre>	
Service ID [hex]	0x23	
Sync/Async	Asynchronous	
Reentrancy	Reentrant for different ClientIds, non reentrant for the same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	<p>E_OK: DTC successfully cleared E_NOT_OK: No DTC selected DEM_WRONG_DTC: Selected DTC value in selected format does not exist or clearing is restricted by configuration to group of all DTCs only. DEM_WRONG_DTCORIGIN: Selected DTCOrigin does not exist DEM_CLEAR_FAILED: DTC clearing failed DEM_CLEAR_BUSY: Another client is currently clearing DTCs. The requested operation will not be started and the caller shall try again at a later moment. DEM_CLEAR_MEMORY_ERROR: An error occurred during erasing a memory location (e.g. if DemClearDTCBehavior is set to DEM_CLRRESP_NON-VOLATILE_FINISH and erasing of non-volatile-block failed).</p>

		△
		DEM_PENDING: Clearing the DTCs is currently in progress. The caller shall call this function again at a later moment. DEM_BUSY: A different Dem_SelectDTC dependent operation according to SWS_Dem_01253 of this client is currently in progress.
Description	Clears single DTCs, as well as groups of DTCs.	
Available via	Dem.h	

]()

8.3.3.2 Dem_ClearPrestoredFreezeFrame

[SWS_Dem_00193] [

Service Name	Dem_ClearPrestoredFreezeFrame	
Syntax	<pre>Std_ReturnType Dem_ClearPrestoredFreezeFrame (Dem_EventIdType EventId)</pre>	
Service ID [hex]	0x07	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different EventIds. Non reentrant for the same EventId.	
Parameters (in)	EventId	Identification of an event by assigned EventId.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: Clear prestored freeze frame was successful E_NOT_OK: Clear prestored freeze frame failed
Description	<p>Clears a prestored freeze frame of a specific event. This API can only be used through the RTE and therefore no declaration is exported via Dem.h.</p> <p>API Availability: This API will be available only if ({ecuc(Dem/DemConfigSet/DemEvent Parameter.DemFFPrestorageSupported)} == true)</p>	
Available via	Dem.h	

]()

8.3.3.3 Dem_GetComponentFailed

[SWS_Dem_01115] [

Service Name	Dem_GetComponentFailed
---------------------	------------------------

△

Syntax	<pre>Std_ReturnType Dem_GetComponentFailed (Dem_ComponentIdType ComponentId, boolean* ComponentFailed)</pre>	
Service ID [hex]	0x2a	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	ComponentId	Identification of a DemComponent
Parameters (inout)	None	
Parameters (out)	ComponentFailed	TRUE: failed FALSE: not failed
Return value	Std_ReturnType	E_OK: getting "ComponentFailed" was successful E_NOT_OK: getting "ComponentFailed" was not successful
Description	Gets the failed status of a DemComponent.	
Available via	Dem.h	

↴()

8.3.3.4 Dem_GetDTCSelectionResult

[SWS_Dem_91023] ↵

Service Name	Dem_GetDTCSelectionResult	
Syntax	<pre>Std_ReturnType Dem_GetDTCSelectionResult (uint8 ClientId)</pre>	
Service ID [hex]	0xb8	
Sync/Async	Asynchronous	
Reentrancy	Reentrant for different ClientIds, non reentrant for the same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The DTC select parameter check is successful and the requested DTC or group of DTC in the selected origin is selected for further operations. E_NOT_OK: No DTC selected DEM_WRONG_DTC: Selected DTC value in selected format does not exist DEM_WRONG_DTCORIGIN: Selected DTCOrigin does not exist DEM_PENDING: Checking the SelectDTC parameters is currently in progress. The caller shall call this function again later. DEM_BUSY: A different Dem_SelectDTC dependent operation according to SWS_Dem_01253 of this client is currently in progress.
Description	Provides information if the last call to Dem_SelectDTC has selected a valid DTC or group of DTCs.	
Available via	Dem.h	

↴()

8.3.3.5 Dem_GetDTCSelectionResultForClearDTC

[SWS_Dem_91020] [

Service Name	Dem_GetDTCSelectionResultForClearDTC	
Syntax	<pre>Std_ReturnType Dem_GetDTCSelectionResultForClearDTC (uint8 ClientId)</pre>	
Service ID [hex]	0xbb	
Sync/Async	Asynchronous	
Reentrancy	Reentrant for different ClientIds, non reentrant for the same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	<p>E_OK: The DTC select parameter check is successful and the requested DTC or group of DTC in the selected origin is selected for further operations.</p> <p>DEM_WRONG_DTC: Selected DTC value in selected format does not exist or a single DTC was selected and Dem only supports to Clear all DTCs.</p> <p>DEM_WRONG_DTCORIGIN: Selected DTCOrigin does not exist.</p> <p>DEM_PENDING: Checking the SelectDTC parameters is currently in progress. The caller shall call this function again later.</p> <p>DEM_BUSY: A different Dem_SelectDTC dependent operation according to SWS_Dem_01253 of this client is currently in progress.</p> <p>E_NOT_OK: No DTC selected.</p>
Description	Provides information if the last call to Dem_SelectDTC has selected a valid DTC or group of DTCs, respecting the settings if the Dem shall clear only all DTCs.	
Available via	Dem.h	

]()

8.3.3.6 Dem_GetEventUdsStatus

[SWS_Dem_91008] [

Service Name	Dem_GetEventUdsStatus	
Syntax	<pre>Std_ReturnType Dem_GetEventUdsStatus (Dem_EventIdType EventId, Dem_UdsStatusByteType* UDSStatusByte)</pre>	
Service ID [hex]	0xb6	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	EventId	Identification of an event by assigned EventId.
Parameters (inout)	None	

Parameters (out)	UDSStatusByte	UDS DTC status byte of the requested event (refer to chapter "Status bit support"). If the return value of the function call is E_NOT_OK, this parameter does not contain valid data.
Return value	Std_ReturnType	E_OK: get of event status was successful E_NOT_OK: get of event status failed
Description	Gets the current UDS status byte assigned to the DTC for the event	
Available via	Dem.h	

]([RS_Diag_04067](#))

8.3.3.7 Dem_GetMonitorStatus

[[SWS_Dem_91007](#)] [

Service Name	Dem_GetMonitorStatus	
Syntax	<pre>Std_ReturnType Dem_GetMonitorStatus (Dem_EventIdType EventID, Dem_MonitorStatusType* MonitorStatus)</pre>	
Service ID [hex]	0xb5	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	EventID	Identification of an event by assigned EventId.
Parameters (inout)	None	
Parameters (out)	MonitorStatus	Monitor status byte of the requested event. If the return value of the function call is E_NOT_OK, this parameter does not contain valid data.
Return value	Std_ReturnType	E_OK: Get monitor status was successful, E_NOT_OK: getting the monitor status failed (e.g. an invalid event id was provided).
Description	Gets the current monitor status for an event.	
Available via	Dem.h	

](
()

8.3.3.8 Dem_GetDebouncingOfEvent

[[SWS_Dem_00730](#)] [

Service Name	Dem_GetDebouncingOfEvent
---------------------	--------------------------

Syntax	Std_ReturnType Dem_GetDebouncingOfEvent (Dem_EventIdType EventId, Dem_DebouncingStateType* DebouncingState)	
Service ID [hex]	0x9f	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	EventId	Identification of an event by assigned EventId.
Parameters (inout)	None	
Parameters (out)	DebouncingState	Bit 0 Temporarily Defective (corresponds to 0 < FDC < 127) Bit 1 finally Defective (corresponds to FDC = 127) Bit 2 temporarily healed (corresponds to -128 < FDC < 0) Bit 3 Test complete (corresponds to FDC = -128 or FDC = 127) Bit 4 DTR Update (= Test complete && Debouncing complete && enable conditions / storage conditions fulfilled)
Return value	Std_ReturnType	E_OK: get of debouncing status per event state successful E_NOT_OK: get of debouncing per event state failed
Description	Gets the debouncing status of an event. This function shall not be used for EventId with native debouncing within their functions. It is rather for EventIds using debouncing within the Dem.	
Available via	Dem.h	

](RS_Diag_04068)

8.3.3.9 Dem_GetDTCOfEvent

[SWS_Dem_00198] [

Service Name	Dem_GetDTCOfEvent	
Syntax	Std_ReturnType Dem_GetDTCOfEvent (Dem_EventIdType EventId, Dem_DTCFormatType DTCFormat, uint32* DTCOfEvent)	
Service ID [hex]	0x0d	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	EventId	Identification of an event by assigned EventId.
	DTCFormat	Defines the output-format of the requested DTC value.
Parameters (inout)	None	
Parameters (out)	DTCOfEvent	Receives the DTC value in respective format returned by this function. If the return value of the function is other than E_OK this parameter does not contain valid data.
Return value	Std_ReturnType	E_OK: get of DTC was successful E_NOT_OK: the call was not successful DEM_E_NO_DTC_AVAILABLE: there is no DTC configured in the requested format
Description	Gets the DTC of an event.	

Available via	Dem.h
----------------------	-------

](*RS_Diag_04201*)

8.3.3.10 Dem_GetDTCSuppression

[SWS_Dem_91025] [

Service Name	Dem_GetDTCSuppression	
Syntax	<pre>Std_ReturnType Dem_GetDTCSuppression (uint8 ClientId, boolean* SuppressionStatus)</pre>	
Service ID [hex]	0xbc	
Sync/Async	Asynchronous	
Reentrancy	Reentrant	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module
Parameters (inout)	None	
Parameters (out)	SuppressionStatus	Defines whether the respective DTC is suppressed (TRUE) or enabled (FALSE).
Return value	Std_ReturnType	E_OK: Operation was successful. E_NOT_OK: Dem_SelectDTC was not called. DEM_WRONG_DTC: No valid DTC or DTC group selected. DEM_WRONG_DTCORIGIN: Wrong DTC origin selected. DEM_PENDING: The requested value is calculated asynchronously and currently not available. The caller can retry later.
Description	Returns the suppression status of a specific DTC. API Availability: This API will be available only if ({ecuc(Dem/DemGeneral.DemSuppressionSupport)} == DEM_DTC_SUPPRESSION)	
Available via	Dem.h	

]()

8.3.3.11 Dem_GetEventAvailable

[SWS_Dem_91040] [

Service Name	Dem_GetEventAvailable	
Syntax	<pre>Std_ReturnType Dem_GetEventAvailable (Dem_EventIdType EventId, boolean* AvailableStatus)</pre>	
Service ID [hex]	0xbe	

△

Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	EventId	Identification of an event by assigned EventId.
Parameters (inout)	None	
Parameters (out)	AvailableStatus	TRUE if the event is available. FALSE if the event is not available.
Return value	Std_ReturnType	E_OK : Event availability has been obtained. E_NOT_OK : Event availability cannot be obtained.
Description	Get the Event's availability.	
Available via	Dem.h	

↴()

8.3.3.12 Dem_GetFaultDetectionCounter

[SWS_Dem_00203] ↵

Service Name	Dem_GetFaultDetectionCounter	
Syntax	<pre>Std_ReturnType Dem_GetFaultDetectionCounter (Dem_EventIdType EventId, sint8* FaultDetectionCounter)</pre>	
Service ID [hex]	0x3e	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	EventId	Identification of an event by assigned EventId.
Parameters (inout)	None	
Parameters (out)	FaultDetectionCounter	This parameter receives the Fault Detection Counter information of the requested EventId. If the return value of the function call is other than E_OK this parameter does not contain valid data. -128dec...127dec PASSED...FAILED according to ISO 14229-1
Return value	Std_ReturnType	E_OK: request was successful E_NOT_OK: request failed DEM_E_NO_FDC_AVAILABLE: there is no fault detection counter available for the requested event
Description	Gets the fault detection counter of an event. This API can only be used through the RTE, and therefore no declaration is exported via Dem.h.	
Available via	Dem.h	

↴()

8.3.3.13 Dem_GetIndicatorStatus

[SWS_Dem_00205] ↵

Service Name	Dem_GetIndicatorStatus	
Syntax	<pre>Std_ReturnType Dem_GetIndicatorStatus (uint8 IndicatorId, Dem_IndicatorStatusType* IndicatorStatus)</pre>	
Service ID [hex]	0x29	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	IndicatorId	Number of indicator
Parameters (inout)	None	
Parameters (out)	IndicatorStatus	Status of the indicator, like off, on, or blinking.
Return value	Std_ReturnType	E_OK: Operation was successful E_NOT_OK: Operation failed
Description	<p>Gets the indicator status derived from the UDS status. API Availability: This API will be available only if ({ecuc(Dem/DemGeneral/DemEventMemory Set/DemIndicator)} != NULL)</p>	
Available via	Dem.h	

]()

8.3.3.14 Dem_GetEventFreezeFrameDataEx

[SWS_Dem_01191] [

Service Name	Dem_GetEventFreezeFrameDataEx	
Syntax	<pre>Std_ReturnType Dem_GetEventFreezeFrameDataEx (Dem_EventIdType EventId, uint8 RecordNumber, uint16 DataId, uint8* DestBuffer, uint16* BufSize)</pre>	
Service ID [hex]	0x6e	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	EventId	Identification of an event by assigned EventId.
	RecordNumber	This parameter is a unique identifier for a freeze frame record as defined in ISO14229-1. 0xFF means most recent freeze frame record is returned. 0x00 is only supported if the Dem module supports WWH-OBD (refer to DemOBDSupport)
	DataId	This parameter specifies the DID (ISO14229-1) that shall be copied to the destination buffer.
Parameters (inout)	BufSize	When the function is called this parameter contains the maximum number of data bytes that can be written to the buffer. The function returns the actual number of written data bytes in this parameter.

Parameters (out)	DestBuffer	This parameter contains a byte pointer that points to the buffer, to which the freeze frame data record shall be written to. The format is raw hexadecimal values and contains no header-information.
Return value	Std_ReturnType	E_OK: Operation was successful E_NOT_OK: Operation could not be performed DEM_NO SUCH ELEMENT: The requested event data is not currently stored (but the request was valid) OR The requested record number is not supported by the event OR The requested DID is not supported by the freeze frame. DEM_BUFFER_TOO_SMALL: The provided buffer size is too small.
Description	Gets the data of a freeze frame by event.	
Available via	Dem.h	

]()

8.3.3.15 Dem_GetEventExtendedDataRecordEx

[SWS_Dem_01190] [

Service Name	Dem_GetEventExtendedDataRecordEx	
Syntax	<pre>Std_ReturnType Dem_GetEventExtendedDataRecordEx (Dem_EventIdType EventId, uint8 RecordNumber, uint8* DestBuffer, uint16* BufSize)</pre>	
Service ID [hex]	0x6d	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	EventId	Identification of an event by assigned EventId.
	RecordNumber	Identification of requested Extended data record. Valid values are between 0x01 and 0xEF as defined in ISO14229-1.
Parameters (inout)	BufSize	When the function is called this parameter contains the maximum number of data bytes that can be written to the buffer. The function returns the actual number of written data bytes in this parameter.
Parameters (out)	DestBuffer	This parameter contains a byte pointer that points to the buffer, to which the extended data shall be written to. The format is raw hexadecimal values and contains no header-information.
Return value	Std_ReturnType	E_OK: Operation was successful E_NOT_OK: Operation could not be performed DEM_NO SUCH ELEMENT: The requested event data is not currently stored (but the request was valid) OR the requested record number is not supported by the event. DEM_BUFFER_TOO_SMALL: The provided buffer size is too small.
Description	Gets the data of an extended data record by event.	
Available via	Dem.h	

] (RS_Diag_04205)

8.3.3.16 Dem_GetEventMemoryOverflow

[SWS_Dem_00559] [

Service Name	Dem_GetEventMemoryOverflow	
Syntax	<pre>Std_ReturnType Dem_GetEventMemoryOverflow (uint8 ClientId, Dem_DTCOriginType DTCOrigin, boolean* OverflowIndication)</pre>	
Service ID [hex]	0x32	
Sync/Async	Synchronous	
Reentrancy	Re-entrant for different ClientIDs, Non re-entrant for same ClientId.	
Parameters (in)	ClientId	DemClientID identifying the DemEventMemorySet indicating in which event memory the overflow has occurred.
	DTCOrigin	If the Dem supports more than one event memory this parameter is used to select the source memory the overflow indication shall be read from.
Parameters (inout)	None	
Parameters (out)	OverflowIndication	This parameter returns TRUE if the according event memory was overflowed, otherwise it returns FALSE.
Return value	Std_ReturnType	E_OK: Operation was successful E_NOT_OK: Operation failed or is not supported
Description	Gets the event memory overflow indication status.	
Available via	Dem.h	

] (RS_Diag_04093)

8.3.3.17 Dem_GetNumberOfEventMemoryEntries

[SWS_Dem_00652] [

Service Name	Dem_GetNumberOfEventMemoryEntries	
Syntax	<pre>Std_ReturnType Dem_GetNumberOfEventMemoryEntries (uint8 ClientId, Dem_DTCOriginType DTCOrigin, uint8* NumberOfEventMemoryEntries)</pre>	
Service ID [hex]	0x35	
Sync/Async	Synchronous	
Reentrancy	Re-entrant for different ClientIDs, Non re-entrant for same ClientId.	
Parameters (in)	ClientId	DemClientID identifying the DemEventMemorySet to which the requested event memory belongs to.
	DTCOrigin	If the Dem supports more than one event memory this parameter is used to select the source memory the number of entries shall be read from.
Parameters (inout)	None	

△

Parameters (out)	NumberOfEventMemoryEntries	Number of entries currently stored in the requested event memory.
Return value	Std_ReturnType	E_OK: Operation was successful E_NOT_OK: Operation failed
Description	Returns the number of entries currently stored in the requested event memory.	
Available via	Dem.h	

」(RS_Diag_04109)

8.3.3.18 Dem_ResetEventDebounceStatus

[SWS_Dem_00683] 「

Service Name	Dem_ResetEventDebounceStatus	
Syntax	<pre>Std_ReturnType Dem_ResetEventDebounceStatus (Dem_EventIdType EventId, Dem_DebounceResetStatusType DebounceResetStatus)</pre>	
Service ID [hex]	0x09	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different EventIds. Non reentrant for the same EventId.	
Parameters (in)	EventId	Identification of an event by assigned EventId.
	DebounceResetStatus	Freeze or reset the internal debounce counter/timer of the specified event.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: Operation was successful E_NOT_OK: Only on development error
Description	Control the internal debounce counter/timer by BSW modules and SW-Cs. The event qualification will not be affected by these debounce state changes. This API is available for BSW modules as soon as Dem_PrelInit has been completed (refer to SWS_Dem_00438 and SWS_Dem_00167).	
Available via	Dem.h	

」(RS_Diag_04105)

8.3.3.19 Dem_ResetEventStatus

[SWS_Dem_00185] 「

Service Name	Dem_ResetEventStatus	
Syntax	<pre>Std_ReturnType Dem_ResetEventStatus (Dem_EventIdType EventId)</pre>	
Service ID [hex]	0x05	
Sync/Async	Asynchronous	
Reentrancy	Reentrant for different EventIds. Non reentrant for the same EventId.	
Parameters (in)	EventId	Identification of an event by assigned EventId.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: Request to reset the event status was successful accepted. E_NOT_OK: Request to reset the event status failed or is not allowed, because the event is already tested in this operation cycle.
Description	Resets the event failed status. This API can only be used through the RTE and therefore no declaration is exported via Dem.h.	
Available via	Dem.h	

]()

8.3.3.20 Dem_RestartOperationCycle

[SWS_Dem_00194] [

Service Name	Dem_RestartOperationCycle	
Syntax	<pre>Std_ReturnType Dem_RestartOperationCycle (uint8 OperationCycleId)</pre>	
Service ID [hex]	0x08	
Sync/Async	Asynchronous	
Reentrancy	Reentrant	
Parameters (in)	OperationCycleId	Identification of operation cycle, like power cycle, driving cycle.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: set of operation cycle was accepted and will be handled asynchronously E_NOT_OK: set of operation cycle was rejected
Description	Sets an operation cycle state. This API can only be used through the RTE and therefore no declaration is exported via Dem.h. The interface has an asynchronous behavior to avoid exceeding of typical timing requirements on APIs if a large number of events has to be processed and during the re-initializations of the related monitors. The asynchronous acknowledgements are the related InitMonitorForEvent callbacks.	
Available via	Dem.h

Service Name	Dem_GetDTCStatusAvailabilityMask	
Syntax	<pre>Std_ReturnType Dem_GetDTCStatusAvailabilityMask (uint8 ClientId, Dem_UdsStatusByteType* DTCStatusMask, Dem_DTCOriginType DTCOrigin)</pre>	
Service ID [hex]	0x16	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant Re-entrant for different ClientIDs, Non re-entrant for same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
	DTCOrigin	This parameter selects the event memory the DTCStatus AvailabilityMask is requested for. Only the values DEM_DTC_ORIGIN_PRIMARY_MEMORY and DEM_DTC_ORIGIN_USERDEFINED_MEMORY_<Name> are valid.
Parameters (inout)	None	
Parameters (out)	DTCStatusMask	DTCStatusMask The value DTCStatusMask indicates the supported DTC status bits from the Dem. All supported information is indicated by setting the corresponding status bit to 1. See ISO14229-1.
Return value	Std_ReturnType	E_OK: get of DTC status mask was successful E_NOT_OK: get of DTC status mask failed
Description	Gets the DTC Status availability mask of the selected fault memory.	
Available via	Dem.h	

] (RS_Diag_04067)

8.3.4.1.3 Dem_GetStatusOfDTC

[SWS_Dem_00212] [

Service Name	Dem_GetStatusOfDTC	
Syntax	<pre>Std_ReturnType Dem_GetStatusOfDTC (uint8 ClientId, uint8* DTCStatus)</pre>	
Service ID [hex]	0x15	
Sync/Async	Asynchronous	
Reentrancy	Reentrant for different ClientIds, non reentrant for the same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
Parameters (inout)	None	
Parameters (out)	DTCStatus	This parameter receives the status information of the requested DTC. It follows the format as defined in ISO14229-1 If the return value of the function call is other than DEM_FILTERED_OK this parameter does not contain valid data.

Return value	Std_ReturnType	E_OK: The status of the DTC is correctly provided in the DTCStatus parameter. E_NOT_OK: No DTC selected DEM_WRONG_DTC: Selected DTC value in selected format does not exist DEM_WRONG_DTCORIGIN: Selected DTCOrigin does not exist DEM_PENDING: Retrieving the DTC status is currently in progress. The caller shall call this function again at a later moment. DEM_NO_SUCH_ELEMENT - Selected DTC does not have an assigned DTC status. DEM_BUSY: A different Dem_SelectDTC dependent operation according to SWS_Dem_01253 of this client is currently in progress.
Description	Gets the status of a DTC. For large configurations and DTC-calibration, the interface behavior can be asynchronous (splitting the DTC-search into segments). The DTCs of OBD Events Suppression shall be reported as Dem_WRONG_DTC.	
Available via	Dem.h	

」(RS_Diag_04067)

Sync/Async	Asynchronous	
Reentrancy	Reentrant for different ClientIds, non reentrant for the same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
Parameters (inout)	None	
Parameters (out)	DTCSeverity	This parameter contains the DTCSeverity according to ISO 14229-1.
Return value	Std_ReturnType	E_OK: The DTC severity is correctly provided in the DTCSeverity parameter. E_NOT_OK: No DTC selected DEM_WRONG_DTC: Selected DTC value in selected format does not exist DEM_WRONG_DTCORIGIN: Selected DTCOrigin does not exist DEM_PENDING: Retrieving the DTC is currently in progress. The caller shall call this function again at a later moment. DEM_BUSY: A different Dem_SelectDTC dependent operation according to SWS_Dem_01253 of this client is currently in progress.
Description	Gets the severity of the requested DTC. For large configurations and DTC-calibration, the interface behavior can be asynchronous (splitting the DTC-search into segments).	
Available via	Dem.h	

」(RS_Diag_04071)

8.3.4.1.5 Dem_GetFunctionalUnitOfDTC

[SWS_Dem_00594] [

Service Name	Dem_GetFunctionalUnitOfDTC	
Syntax	<pre>Std_ReturnType Dem_GetFunctionalUnitOfDTC (uint8 ClientId, uint8★ DTCFunctionalUnit)</pre>	
Service ID [hex]	0x34	
Sync/Async	Asynchronous	
Reentrancy	Reentrant for different ClientIds, non reentrant for the same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
Parameters (inout)	None	
Parameters (out)	DTCFunctionalUnit	Functional unit value of this DTC
Return value	Std_ReturnType	<p>E_OK: The DTC functional unit is provided in the parameter DTCFunctionalUnit. E_NOT_OK: No DTC selected DEM_WRONG_DTC: Selected DTC value in selected format does not exist DEM_WRONG_DTCORIGIN: Selected DTCorigin does not exist DEM_PENDING: Retrieving the DTC functional unit is currently in progress. The caller shall call this function again at a later moment. DEM_BUSY: A different Dem_SelectDTC dependent operation according to SWS_Dem_01253 of this client is currently in progress.</p>
Description	Gets the functional unit of the requested DTC.	
Available via	Dem.h	

] (RS_Diag_04156)

8.3.4.1.6 Dem_SetDTCFilter

[SWS_Dem_00208] [

Service Name	Dem_SetDTCFilter	
Syntax	<pre>Std_ReturnType Dem_SetDTCFilter (uint8 ClientId, uint8 DTCStatusMask, Dem_DTCFormatType DTCFormat, Dem_DTCoriginType DTCorigin, boolean FilterWithSeverity, Dem_DTCSeverityType DTCSeverityMask, boolean FilterForFaultDetectionCounter)</pre>	
Service ID [hex]	0x13	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different ClientIds, non reentrant for the same ClientId.	

Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
	DTCStatusMask	Status-byte mask for DTC status-byte filtering Values: 0x00: Autosar-specific value to deactivate the status-byte filtering (different meaning than in ISO 14229-1) to report all supported DTCs (used for service 0x19 subfunctions 0x0A/0x15) 0x01..0xFF: Status-byte mask according to ISO 14229-1 DTCStatusMask (handed over by Dcm from service request directly) to filter for DTCs with at least one status bit set matching this status-byte mask
	DTCFormat	Defines the output-format of the requested DTC values for the sub-sequent API calls. If passed value does not fit to Configuration, the DET error DEM_E_WRONG_CONFIGURATION shall be reported, e.g. if DTCFormat "DEM_DTC_FORMAT_OBD" is passed, but OBD is not supported per configuration.
	DTCOrigin	If the Dem supports more than one event memory this parameter is used to select the source memory the DTCs shall be read from. If passed value does not fit to Configuration, the DET error DEM_E_WRONG_CONFIGURATION shall be reported, e.g. if DTCOrigin "DEM_DTC_ORIGIN_MIRROR_MEMORY" is passed, but no mirror memory is configured.
	FilterWithSeverity	This flag defines whether severity information (ref. to parameter below) shall be used for filtering. This is to allow for coexistence of DTCs with and without severity information.
	DTCSeverityMask	Contains the DTCSeverityMask according to ISO14229-1.
	FilterForFaultDetection Counter	This flag defines whether the fault detection counter information shall be used for filtering. This is to allow for coexistence of DTCs with and without fault detection counter information. If fault detection counter information is filter criteria, only those DTCs with a fault detection counter value between 1 and 0x7E shall be reported. Remark: If the event does not use the debouncing inside Dem, then the Dem must request this information via GetFaultDetectionCounter.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_NOT_OK: Indicates a wrong DTCOrigin or DTCFormat
Description	<p>Sets the DTC Filter.</p> <p>The server shall perform a bit-wise logical AND-ing operation between the parameter DTCStatusMask and the current UDS status in the server. In addition to the DTCStatus AvailabilityMask, the server shall return all DTCs for which the result of the AND-ing operation is non-zero [i.e. (statusOfDTC & DTCStatusMask) != 0]. The server shall process only the DTC Status bits that it is supporting. OBD Events Suppression shall be ignored for this computation. If no DTCs within the server match the masking criteria specified in the clients request, no DTC or status information shall be provided following the DTCStatusAvailabilityMask byte in the positive response message</p> $(((statusOfDTC \& DTCStatusMask) != 0) \&& ((severity \& DTCSeverityMask) != 0)) == \text{TRUE}$	
Available via	Dem.h	

|(RS_Diag_04205)

8.3.4.1.7 Dem_GetNumberOfFilteredDTC

[SWS_Dem_00214] [

Service Name	Dem_GetNumberOfFilteredDTC	
Syntax	<pre>Std_ReturnType Dem_GetNumberOfFilteredDTC (uint8 ClientId, uint16* NumberOfFilteredDTC)</pre>	
Service ID [hex]	0x17	
Sync/Async	Asynchronous	
Reentrancy	Re-entrant for different ClientIDs, Non re-entrant for same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
Parameters (inout)	None	
Parameters (out)	NumberOfFilteredDTC	The number of DTCs matching the defined status mask.
Return value	Std_ReturnType	E_OK: Getting number of filtered DTCs was successful E_NOT_OK: No DTC filter set DEM_PENDING: The requested operation is currently in progress. The caller shall call this function again at a later moment.
Description	Gets the number of a filtered DTC.	
Available via	Dem.h	

]()

8.3.4.1.8 Dem_GetNextFilteredDTC

[SWS_Dem_00215] ↴

Service Name	Dem_GetNextFilteredDTC	
Syntax	<pre>Std_ReturnType Dem_GetNextFilteredDTC (uint8 ClientId, uint32* DTC, uint8* DTCStatus)</pre>	
Service ID [hex]	0x18	
Sync/Async	Synchronous or Asynchronous	
Reentrancy	Re-entrant for different ClientIDs, Non re-entrant for same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
Parameters (inout)	None	
Parameters (out)	DTC	Receives the DTC value in respective format of the filter returned by this function. If the return value of the function is other than DEM_FILTERED_OK this parameter does not contain valid data.
	DTCStatus	This parameter receives the status information of the requested DTC. It follows the format as defined in ISO14229-1 If the return value of the function call is other than DEM_FILTERED_OK this parameter does not contain valid data.

Return value	Std_ReturnType	E_OK: Returned next filtered element E_NOT_OK: No DTC filter set DEM_NO SUCH ELEMENT: No further element matching the filter criteria found DEM_PENDING: The requested operation is currently in progress. The caller shall call this function again at a later moment. Note that according to SWS_Dem_00653 this return value is not always allowed.
Description	Gets the next filtered DTC matching the filter criteria. For UDS services, the interface has an asynchronous behavior, because a large number of DTCs has to be processed.	
Available via	Dem.h	

]()

8.3.4.1.9 Dem_GetNextFilteredDTCAndFDC

[SWS_Dem_00227] [

Service Name	Dem_GetNextFilteredDTCAndFDC	
Syntax	<pre>Std_ReturnType Dem_GetNextFilteredDTCAndFDC (uint8 ClientId, uint32* DTC, sint8* DTCFaultDetectionCounter)</pre>	
Service ID [hex]	0x3b	
Sync/Async	Asynchronous	
Reentrancy	Re-entrant for different ClientIDs, Non re-entrant for same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
Parameters (inout)	None	
Parameters (out)	DTC	Receives the DTC value in respective format of the filter returned by this function. If the return value of the function is other than DEM_FILTERED_OK this parameter does not contain valid data.
	DTCFaultDetection Counter	This parameter receives the Fault Detection Counter information of the requested DTC. If the return value of the function call is other than DEM_FILTERED_OK this parameter does not contain valid data. -128dec...127dec PASSED...FAILED according to ISO 14229-1
Return value	Std_ReturnType	E_OK: Returned next filtered element E_NOT_OK: No DTC filter set DEM_NO SUCH ELEMENT: No further element matching the filter criteria found DEM_PENDING: The requested operation is asynchronously processed is currently in progress. The caller shall call this function again at a later moment.
Description	Gets the next filtered DTC and its associated Fault Detection Counter (FDC) matching the filter criteria. The interface has an asynchronous behavior, because a large number of DTCs has to be processed and the FDC might be received asynchronously from a SW-C, too.	
Available via	Dem.h

8.3.4.1.11 Dem_SetFreezeFrameRecordFilter

[SWS_Dem_00209] [

Service Name	Dem_SetFreezeFrameRecordFilter	
Syntax	<pre>Std_ReturnType Dem_SetFreezeFrameRecordFilter (uint8 ClientId, Dem_DTCFormatType DTCFormat)</pre>	
Service ID [hex]	0x3f	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different ClientIds, non reentrant for the same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
	DTCFormat	Defines the output-format of the requested DTC values
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	Status of the operation to (re-)set a freeze frame record filter. E_OK: Filter is accepted E_NOT_OK: Wrong filter selected
Description	Sets a freeze frame record filter.	
Available via	Dem.h	

]()

8.3.4.1.12 Dem_GetNextFilteredRecord

[SWS_Dem_00224] [

Service Name	Dem_GetNextFilteredRecord	
Syntax	<pre>Std_ReturnType Dem_GetNextFilteredRecord (uint8 ClientId, uint32* DTC, uint8* RecordNumber)</pre>	
Service ID [hex]	0x3a	
Sync/Async	Asynchronous	
Reentrancy	Reentrant for different ClientIds, non reentrant for the same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
Parameters (inout)	None	
Parameters (out)	DTC	DTC Receives the DTC value in respective format of the filter returned by this function. If the return value of the function is other than E_OK this parameter does not contain valid data.
	RecordNumber	Freeze frame record number of the reported DTC (relative addressing). If the return value of the function is other than E_OK this parameter does not contain valid data.

▽

Return value	Std_ReturnType	Status of the operation to retrieve a DTC and its associated snapshot record number from the Dem. E_OK: Returned next filtered element DEM_NO_SUCH_ELEMENT: No further element (matching the filter criteria) found DEM_PENDING: The requested value is calculated asynchronously and currently not available. The caller can retry later. Only used by asynchronous interfaces.
Description	Gets the next freeze frame record number and its associated DTC stored in the event memory. The interface has an asynchronous behavior, because NvRAM access might be required.	
Available via	Dem.h	

]()

8.3.4.1.13 Dem_GetDTCByOccurrenceTime

[SWS_Dem_00218] [

Service Name	Dem_GetDTCByOccurrenceTime	
Syntax	<pre>Std_ReturnType Dem_GetDTCByOccurrenceTime (uint8 ClientId, Dem_DTCRequestType DTCRequest, uint32* DTC)</pre>	
Service ID [hex]	0x19	
Sync/Async	Synchronous	
Reentrancy	Re-entrant for different ClientIDs, Non re-entrant for same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
	DTCRequest	This parameter defines the request type of the DTC.
Parameters (inout)	None	
Parameters (out)	DTC	Receives the DTC value in UDS format returned by the function. If the return value of the function is other than DEM_OCCURR_OK this parameter does not contain valid data.
Return value	Std_ReturnType	E_OK: get of DTC was successful E_NOT_OK: the call was not successful DEM_NO_SUCH_ELEMENT: The requested element is not stored
Description	Gets the DTC by occurrence time. There is no explicit parameter for the DTC-origin as the origin always is DEM_DTC_ORIGIN_PRIMARY_MEMORY.	
Available via	Dem.h

8.3.5.12 Dem_DcmReadDataOfOBDFreezeFrame

[SWS_Dem_00327] [

Service Name	Dem_DcmReadDataOfOBDFreezeFrame	
Syntax	<pre>Std_ReturnType Dem_DcmReadDataOfOBDFreezeFrame (uint8 PID, uint8 DataElementIndexOfPID, uint8* DestBuffer, uint16* BufSize)</pre>	
Service ID [hex]	0x52	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (inout)	PID	This parameter is an identifier for a PID as defined in ISO15031-5.
	DataElementIndexOfPID	Data element index of this PID according to the Dcm configuration of service \$02. It is zero-based and consecutive, and ordered by the data element positions (configured in Dcm, refer to SWS_Dem_00597).

Parameters (inout)	DestBuffer	This parameter contains a byte pointer that points to the buffer, to which the data element of the PID shall be written to. The format is raw hexadecimal values and contains no header-information.
	BufSize	When the function is called this parameter contains the maximum number of data bytes that can be written to the buffer. The function returns the actual number of written data bytes in this parameter.
Parameters (out)	None	
Return value	Std_ReturnType	E_OK Freeze frame data was successfully reported E_NOT_OK Freeze frame data was not successfully reported
Description	Gets data element per PID and index of the most important freeze frame being selected for the output of service \$02. The function stores the data in the provided DestBuffer. API is needed in OBD-relevant ECUs only. API Availability: This API will be available only if ({ecuc(Dem/DemGeneral.DemOBDSupport)} != DEM_OBD_NO_OBD_SUPPORT)

8.3.7.15 Dem_GetDTCSeverityAvailabilityMask

[SWS_Dem_01168] ┌

Service Name	Dem_GetDTCSeverityAvailabilityMask	
Syntax	<pre>Std_ReturnType Dem_GetDTCSeverityAvailabilityMask (uint8 ClientId, Dem_DTCSeverityType* DTCSeverityMask)</pre>	
Service ID [hex]	0xb2	
Sync/Async	Synchronous	
Reentrancy	Re-entrant for different ClientIDs, Non re-entrant for same ClientId.	
Parameters (in)	ClientId	Unique client id, assigned to the instance of the calling module.
Parameters (inout)	None	
Parameters (out)	DTCSeverityMask	DTCSeverityMask The value DTCSeverityMask indicates the supported DTC severity bits from the Dem. All supported information is indicated by setting the corresponding status bit to 1. See ISO14229-1.
Return value	Std_ReturnType	E_OK: get of DTC severity mask was successful E_NOT_OK: get of DTC severity mask failed
Description	Gets the DTC Severity availability mask.	
Available via	Dem.h	

」()

8.3.7.16 Dem_GetB1Counter

[SWS_Dem_01169] ┌

Service Name	Dem_GetB1Counter	
Syntax	<pre>Std_ReturnType Dem_GetB1Counter (uint16* B1Counter)</pre>	
Service ID [hex]	0xb4	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	None	
Parameters (inout)	None	
Parameters (out)	B1Counter	Buffer containing the B1 counter. The buffer is provided by the application with the size of 2 bytes.
Return value	Std_ReturnType	Always E_OK is returned, as E_NOT_OK will never appear.
Description	Service to report the value of the B1 counter computed by the Dem. API is needed in WWH-OBD relevant ECUs only	
Available via	Dem.h	

]()

8.3.7.17 Dem_SetDTR

[SWS_Dem_00765] [

Service Name	Dem_SetDTR	
Syntax	<pre>Std_ReturnType Dem_SetDTR (uint16 DTRId, sint32 TestResult, sint32 LowerLimit, sint32 UpperLimit, Dem_DTRControlType Ctrlval)</pre>	
Service ID [hex]	0xa2	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different DTRIds. Non reentrant for the same DTRId.	
Parameters (in)	DTRId	Identification of a DTR element by assigned DTRId.
	TestResult	Test result of DTR
	LowerLimit	Lower limit of DTR
	UpperLimit	Upper limit of DTR
	Ctrlval	Control value of the DTR to support its interpretation Dem-internally.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: Report of DTR result successful E_NOT_OK: Report of DTR result failed

Description	Reports a DTR result with lower and upper limit. The internal eventstatus serves as master whether the DTR values are forwarded or ignored, also taking the DTRUpdateKind into account. The EventId that is related to the DTR is assigned per configuration (and derived from ServiceNeeds). Processing takes enable/storage conditions into account. API is needed in OBD-relevant ECUs only. API Availability: This API will be available only if ({ecuc(Dem/DemGeneral.DemOBDSupport)} != DEM_OBD_NO_OBD_SUPPORT)
Available via	Dem.h

]()

8.4 Expected Interfaces

In this chapter, all interfaces required from other modules are listed.

8.4.1 Mandatory Interfaces

This chapter defines all interfaces, which are required to fulfill the core functionality of the Dem module.

API function Description

[]

API Function	Header File	Description
There are no mandatory interfaces.		

]()

8.4.2 Optional Interfaces

This chapter defines all interfaces, which are required to fulfill an optional functionality of the Dem module.

[SWS_Dem_00255] []

API Function	Header File	Description
Dcm_DemTriggerOnDTCStatus	Dcm_Dem.h	Triggers on changes of the UDS status byte. Allows to trigger on ROE Event for subservice On DTCStatusChanged.
Det_ReportError	Det.h	Service to report development errors.

API Function	Header File	Description
FIM_DemInit	FIM_Dem.h	This service re-initializes the FIM.
FIM_DemTriggerOnComponentStatus	FIM_Dem.h	Triggers on changes of the component failed status.
FIM_DemTriggerOnMonitorStatus	FIM_Dem.h	This service is provided to be called by the Dem in order to inform the Fim about monitor status changes.
J1939Dcm_DemTriggerOnDTCStatus	J1939Dcm_Dem.h	Trigger for DM01 message that a UDS status change has happened.
NvM_GetErrorStatus	NvM.h	Service to read the block dependent error/status information.
NvM_ReadBlock	NvM.h	Service to copy the data of the NV block to its corresponding RAM block.
NvM_SetRamBlockStatus	NvM.h	Service for setting the RAM block status of a permanent RAM block or the status of the explicit synchronization of a NVRAM block.
NvM_WriteBlock	NvM.h	Service to copy the data of the RAM block to its corresponding NV block.

]([SRS_BSW_00171](#))

Note: Based on implementation strategy FIM_DemInit can be used (refer also to chapter [7.11.3](#)).

Note: Based on implementation strategy either NvM_[Read|Write]Block or NvM_SetRamBlockStatus can be omitted, or the NvM usage is deactivated by configuration completely (refer also to chapter [7.11.5](#)).

8.4.3 Configurable interfaces

In this chapter, all interfaces are listed where the target function could be configured. The target function is usually a callback function. The names of this kind of interfaces are not fixed because they are configurable.

Figure 8.4: Configuration interfaces of the Dem module

8.4.3.1 Interface BSW modules / SW-Components <=> Dem

The callback interface from Dem to SW-Components is realized via RTE port interfaces. The following callback descriptions address the c-callbacks of other BSW modules.

8.4.3.1.1 InitMonitorForEvent

[SWS_Dem_00256]

Service Name	<Module>_DemInitMonitorFor<<EventName>>
Syntax	Std_ReturnType <Module>_DemInitMonitorFor<<EventName>> (Dem_InitMonitorReasonType InitMonitorReason)
Sync/Async	Synchronous

Reentrancy	Reentrant	
Parameters (in)	InitMonitorReason	Specific (re-)initialization reason evaluated from the monitor to identify the initialization kind to be performed.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	Return value unused - only for compatibility with according RTE operation.
Description	Inits the diagnostic monitor of a specific event. There is one separate callback per event (if configured), if no port interface is provided by the Dem.	
Available via	Dem_Externals.h	

」(SRS_BSW_00310, SRS_BSW_00101)

8.4.3.1.2 DemTriggerOnComponentStatus

[SWS_Dem_01116] 〔

Service Name	<Module>_DemTriggerOnComponentStatus	
Syntax	Std_ReturnType <Module>_DemTriggerOnComponentStatus (Dem_ComponentIdType ComponentId)	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	ComponentId	Identification of a DemComponent.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	Return value unused - only for compatibility with according RTE operation.
Description	Triggers on changes of the DemComponent failed status.	
Available via	Dem_Externals.h	

」()

8.4.3.2 ClearDtcNotification

[SWS_Dem_91002] 〔

Service Name	<Module>_ClearDtcNotification
---------------------	-------------------------------

△

Syntax	Std_ReturnType <Module>_ClearDtcNotification (uint32 DTC, Dem_DTCFormatType DTCFormat, Dem_DTCOriginType DTCOrigin)	
Sync/Async	Asynchronous	
Reentrancy	Non Reentrant	
Parameters (in)	DTC	DTC or group of DTC that is cleared.
	DTCFormat	Format of the DTC value.
	DTCOrigin	Event memory which is selected by the current clear operation.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK is always returned
Description	Called by the Dem when performing a clear DTC operation.	
Available via	Dem_Externals.h

8.4.3.8 EventDataChanged

[SWS_Dem_00562] ↴

Service Name	<Module>_DemTriggerOnEventData	
Syntax	Std_ReturnType <Module>_DemTriggerOnEventData (Dem_EventIdType EventId)	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	EventId	Identification of an event by assigned EventId.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: this function always returns E_OK for compatibility reasons with RTE.
Description	Triggers on changes of the event related data in the event memory.	
Available via	Dem_Externals.h	

↳(RS_Diag_04160)

8.4.3.9 ClearEventAllowed

[SWS_Dem_00563] ↴

Service Name	<Module>_DemClearEventAllowed<ForCondition>	
Syntax	Std_ReturnType <Module>_DemClearEventAllowed<ForCondition> (boolean* Allowed)	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	None	
Parameters (inout)	None	
Parameters (out)	Allowed	True - clearance of event is allowed False - clearance of event is not allowed
Return value	Std_ReturnType	E_OK: Operation was successful E_NOT_OK: Operation failed
Description	Triggers on DTC-deletion, which is not allowed if the out-parameter returns False. There is one separate callback per condition, which can be assigned to one or several events, if no port interface is provided by the Dem. Parameter "Allowed" will be unchanged in case E_NOT_OK is returned.	
Available via	Dem_Externals.h	

↳()

8.4.3.10 ReadDataElement

[SWS_Dem_00564] ↴

Service Name	<Module>_DemRead<DataElement>	
Syntax	<pre>Std_ReturnType <Module>_DemRead<DataElement> (uint8* Buffer, [Dem_MonitorDataType monitorData0])</pre>	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	monitorData0	MonitorData that was provided by Dem_SetEventStatusWith MonitorData
Parameters (inout)	None	
Parameters (out)	Buffer	Buffer containing the value of the data element
Return value	Std_ReturnType	E_OK: Operation was successful E_NOT_OK: Operation failed
Description	Requests the current value of the data element. There is one separate callback per data element, if no port interface is provided by the Dem.	
Available via	Dem_Externals.h	

]()

Note: Square brackets [] indicate that an argument is optional.

8.4.3.11 GetFaultDetectionCounter

[SWS_Dem_00263] 「

Service Name	<Module>_DemGetFaultDetectionCounter<ForEvent>	
Syntax	<pre>Std_ReturnType <Module>_DemGetFaultDetectionCounter<ForEvent> (sint8* FaultDetectionCounter)</pre>	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	None	
Parameters (inout)	None	
Parameters (out)	FaultDetectionCounter	This parameter receives the fault detection counter information of the requested EventId. If the return value of the function call is other than E_OK this parameter does not contain valid data. -128dec...127dec PASSED...FAILED according to ISO 14229-1
Return value	Std_ReturnType	E_OK: request was successful E_NOT_OK: request failed
Description	Gets the current fault detection counter value. There is one c-callback per event using monitor-internal debouncing, if no port interface is provided by the Dem.	
Available via	Dem_Externals.h	

]()

8.4.3.12 Dem_CallbackEventSyncStorageProcessed

[SWS_Dem_91042]{DRAFT} [

Service Name	Dem_CallbackEventSyncStorageProcessed (draft)	
Syntax	<pre>Std_ReturnType Dem_CallbackEventSyncStorageProcessed (void)</pre>	
Service ID [hex]	0xc0	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	None	
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: For RTE compatibility reasons, only E_OK is allowed and returned by the caller.
Description	Called by the Dem after the internal processing of Dem_SetEventFailedWithSyncFreezeFrame is done and a further call of Dem_SetEventFailedWithSyncFreezeFrame with the same event ID can be processed by the Dem. Tags: atp.Status=draft	
Available via	Dem.h	

]()

8.5 Scheduled functions

These functions are directly called by Basic Software Scheduler. The following functions shall have no return value and no parameter. All functions shall be non reentrant.

8.5.1 Dem_MainFunction

[SWS_Dem_00266] [

Service Name	Dem_MainFunction
Syntax	<pre>void Dem_MainFunction (void)</pre>
Service ID [hex]	0x55
Description	Processes all not event based Dem internal functions.
Available via	SchM_Dem.h

]()

[SWS_Dem_00125] [The function Dem_MainFunction shall process all not event based Dem module internal functions.] ([SRS_BSW_00373](#))

For details refer to the chapter 8.5 “Scheduled Functions” in SWS_BSWGeneral.

↴

8.6.3.12 DataServices_{Data}

[SWS_Dem_00621] [

Name	DataServices_{Data}		
Comment	If configured it gets the data element value contained in a DID, a PID, or an extended data record from the respective SW-C via client/server or sender/receiver communication (refer to Figure "Dem and Dcm module requests PID data elements of SW-C via ReadData operation"). For each data element, one port of this interface type is provided by the SW-Cs.		
IsService	true		
Variation	(({ecuc(Dem/DemGeneral/DemDataElementClass)}) instanceof {ecuc(Dem/DemGeneral/DemDataElementClass/DemExternalCSDDataElementClass)})&& ({ecuc(Dem/DemGeneral/DemDataElementClass/DemExternalCSDDataElementClass/DemDataElementUsePort)} == true)) Data = {ecuc(Dem/DemGeneral/DemDataElementClass.SHORT-NAME)}		
Possible Errors	0	E_OK	Operation successful
	1	E_NOT_OK	Operation failed

Operation	ReadData																		
Comment	The server is not allowed to return E_NOT_OK, but shall always provide a valid data value (e.g. a default/replacement value in an error-case) to Dcm/Dem nevertheless the signature of the operation includes E_NOT_OK to ensure compatibility between server runnable and RTE Call API, since the RTE may return negative Std_Return values in certain cases (e.g. partition of server stopped)																		
Variation	–

]()

Note: The Dem- and Dcm-interfaces of this type are compatible, to be connected to the same provide-port of the application.

Note: The Dem Service Component supports synchronous client/server interfaces only (due to the used mechanisms for the [event memory](#)) and is compatible with the Dcm interface DataServices_<Data> with the setting for USE_DATA_SYNCH_CLIENT_SERVER. All further operations contained in the Dcm interface CSDataServices_<Data> like WriteData, ReadDataLength (relates to data elements with a variable length), ConditionCheckRead, etc. are provided by the SW-C and used by the Dcm, but are not required/considered by the Dem module.

Note: The Dem Service Component is compatible with the Dcm interface DataServices_<Data> with the setting for USE_DATA_SENDER_RECEIVER.

8.6.3.14 DiagnosticInfo

[SWS_Dem_00599] []

10 Configuration specification

In general, this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter chapter [10.1](#) describes fundamentals. It also specifies a template (table) you shall use for the parameter specification. We intend to leave chapter [10.1](#) in the specification to guarantee comprehension.

- chapter [10.2](#) specifies the structure (containers) and the parameters of the module Dem
- chapter [10.3](#) specifies published information of the module Dem

10.1 How to read this chapter

For details refer to the chapter 10.1 “Introduction to configuration specification” in SWS_BSWGeneral

10.2 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meaning of the parameters are described in chapter [7](#) and chapter [8](#).

10.2.1 Dem

Module SWS Item	ECUC_Dem_00928	
Module Name	Dem	
Module Description	Configuration of the Dem (Diagnostic Event Manager) module.	
Post-Build Variant Support	true	
Supported Config Variants	VARIANT-POST-BUILD, VARIANT-PRE-COMPIL	
Included Containers		
Container Name	Multiplicity	Scope / Dependency
DemConfigSet	1	This container contains the configuration parameters and sub containers of the Dem module supporting multiple configuration sets.
DemGeneral	1	This container contains the configuration (parameters) of the BSW Dem

10.2.2 General

10.2.2.1 DemGeneral

SWS Item	[ECUC_Dem_00677]
-----------------	------------------

Container Name	DemGeneral
Parent Container	Dem
Description	This container contains the configuration (parameters) of the BSW Dem
Configuration Parameters	

Name	DemAgingRequiresNotFailedCycle [ECUC_Dem_00918]		
Parent Container	DemGeneral		
Description	<p>Defines if the aging cycle counter is processed in operation cycles with test failed report or not.</p> <p>True: Aging cycle counter is processed only in operation cycles without test failed. False (Default): No effect on aging cycle counter processing.</p>		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value	false		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemAgingRequiresTestedCycle [ECUC_Dem_00877]		
Parent Container	DemGeneral		
Description	<p>Defines if the aging cycle counter is processed every aging cycles or if only tested aging cycle are considered.</p> <p>true: only tested aging cycle are considered for aging cycle counter</p> <p>false: aging cycle counter is processed every aging cycle</p>		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemAvailabilitySupport [ECUC_Dem_00878]		
Parent Container	DemGeneral		
Description	This configuration switch defines, whether support for availability is enabled or not.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_EVENT_AVAILABILITY	Support availability by Event	
	DEM_NO_AVAILABILITY	Availability is not supported	
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemBswErrorBufferSize [ECUC_Dem_00625]		
Parent Container	DemGeneral		
Description	Maximum number of elements in buffer for handling of BSW errors (ref. to SWS_Dem_00207).		
Multiplicity	0..1		
Type	EcucIntegerParamDef		
Range	0 .. 255		
Default Value	false		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemClearDTCBehavior [ECUC_Dem_00766]		
Parent Container	DemGeneral		
Description	Defines the clearing process of diagnostic information for volatile and non-volatile memory and the positive response handling for the Dcm module.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_CLRRESP_NONVO LATILE_FINISH	Return DEM_CLEAR_OK after volatile and non-volatile event memory data cleared.	

Post-Build Variant Value	DEM_CLRRESP_NONVOLATILE_TRIGGER	Return DEM_CLEAR_OK after volatile event memory data cleared and non-volatile event memory clearing is triggered	
	DEM_CLRRESP_VOLATILE false	Return DEM_CLEAR_OK after volatile event memory data cleared	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemClearDTCLimitation [ECUC_Dem_00790]				
Parent Container	DemGeneral				
Description	Defines the supported Dem_<...>ClearDTC API scope.				
Multiplicity	1				
Type	EcucEnumerationParamDef				
Range	DEM_ALL_SUPPORTED_DTCS	Dem_<...>ClearDTC accepts all supported DTC values, as well as all DTC values which are configured in DemGroupDTCs and DEM_DTC_GROUP_ALL_DTCS.			
	DEM_ONLY_CLEAR_ALL_DTCS	Dem_<...>ClearDTC accepts ClearAllDTCs only.			
Default Value	DEM_ALL_SUPPORTED_DTCS				
Post-Build Variant Value	false				
Value Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Scope / Dependency	scope: ECU				

Name	DemDataElementDefaultEndianness [ECUC_Dem_00858]		
Parent Container	DemGeneral		
Description	Defines the default endianness of the data belonging to a data element which is applicable if the DemExternalSRDataElementClass does not define a endianness.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	BIG_ENDIAN	Most significant byte shall come at the lowest address.	
	LITTLE_ENDIAN	Most significant byte shall come highest address	
	OPAQUE	opaque data endianness	
Post-Build Variant Value	false		

Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemDebounceCounterBasedSupport [ECUC_Dem_00724]		
Parent Container	DemGeneral		
Description	<p>This configuration switch defines, whether support for counter based debouncing is enabled or not.</p> <p>true: counter based debouncing support is enabled false: counter based debouncing support is disabled</p>		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemDebounceTimeBasedSupport [ECUC_Dem_00725]		
Parent Container	DemGeneral		
Description	<p>This configuration switch defines, whether support for time based debouncing is enabled or not.</p> <p>true: time based debouncing support is enabled false: time based debouncing support is disabled</p>		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemDevErrorDetect [ECUC_Dem_00648]		
Parent Container	DemGeneral		
Description	Switches the development error detection and notification on or off. <ul style="list-style-type: none"> • true: detection and notification is enabled. • false: detection and notification is disabled. 		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value	false		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time Link time Post-build time	X	All Variants
Scope / Dependency	scope: local		

Name	DemEventCombinationSupport [ECUC_Dem_00740]		
Parent Container	DemGeneral		
Description	This parameter defines the type of event combination supported by the Dem.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_EVCOMB_DISABLE D	No event combination supported	
	DEM_EVCOMB_ONRETR IEVAL	Event combination on retrieval	
	DEM_EVCOMB_ONSTOR AGE	Event combination on storage	
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time Link time Post-build time	X	All Variants
Scope / Dependency	scope: ECU		

Name	DemGeneralCallbackMonitorStatusChangedFnc [ECUC_Dem_00938]		
Parent Container	DemGeneral		
Description	Function name of prototype "<Module>_DemTriggerOnMonitorStatus". Function for the General Monitor Status Changed notification.		
Multiplicity	0..1		
Type	EcucFunctionNameDef		
Default Value			
Regular Expression			
Post-Build Variant Multiplicity	false		

Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemGeneralInterfaceSupport [ECUC_Dem_00880]		
Parent Container	DemGeneral		
Description	The interfaces GeneralEvtInfo, GeneralCallbackEventDataChanged, GeneralCallbackMonitorStatusChanged and GeneralCallbackEventUdsStatusChange are provided if DemGeneralInterfaceSupport is equal to true.		
Multiplicity	1		
Type Default Value	EcucBooleanParamDef		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemMaxNumberEventEntryEventBuffer [ECUC_Dem_00899]				
Parent Container	DemGeneral				
Description	Specifies the size of the buffer for storing environmental data (freezeframes and extended data) until they are processed and stored to the event memory.				
Multiplicity	0..1				
Type	EcucIntegerParamDef				
Range Default Value	1 .. 250				
Post-Build Variant Multiplicity	false				
Post-Build Variant Value	false				
Multiplicity Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			

Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemMaxNumberPrestoredFF [ECUC_Dem_00692]		
Parent Container	DemGeneral		
Description	Defines the maximum number for prestored freeze frames. If set to 0, then freeze frame prestorage is not supported by the ECU.		
Multiplicity	1		
Type	EcucIntegerParamDef		
Range	0 .. 255		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemOBDSupport [ECUC_Dem_00698]		
Parent Container	DemGeneral		
Description	This configuration switch defines OBD support and kind of OBD ECU.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_OBD_DEP_SEC_E CU	Kind of OBD ECU: OBD Dependend / Secondary ECU	
	DEM_OBD_MASTER_EC U	Kind of OBD ECU: Master ECU	
	DEM_OBD_NO_OBD_SU PPOR	OBD is not supported within this ECU	
	DEM_OBD_PRIMARY_E CU	Kind of OBD ECU: Primary ECU	
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemPTOSupport [ECUC_Dem_00704]		
Parent Container	DemGeneral		
Description	This configuration switch defines, whether PTO support (and therefore PID \$1E support) is enabled or not.		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: ECU		

Name	DemResetConfirmedBitOnOverflow [ECUC_Dem_00799]		
Parent Container	DemGeneral		
Description	This configuration switch defines, whether the confirmed bit is reset or not while an event memory entry will be displaced.		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value	true		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: local		

Name	DemStatusBitHandlingTestFailedSinceLastClear [ECUC_Dem_00784]				
Parent Container	DemGeneral				
Description	This configuration switch defines, whether the aging and displacement mechanism shall be applied to the "TestFailedSinceLastClear" status bits.				
Multiplicity	1				
Type	EcucEnumerationParamDef				
Range	DEM_STATUS_BIT_AGIN G_AND_DISPLACEMENT	the "TestFailedSinceLastClear" status bits are reset to 0, if aging or displacement applies (like done for the "ConfirmedDTC" status bits)			
	DEM_STATUS_BIT_NORMAL	aging and displacement has no impact on the "TestFailedSinceLastClear" status bits			
Default Value	DEM_STATUS_BIT_NORMAL				
Post-Build Variant Value	false				

Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemStatusBitStorageTestFailed [ECUC_Dem_00714]		
Parent Container	DemGeneral		
Description	Activate/Deactivate the permanent storage of the "TestFailed" status bits. true: storage activated false: storage deactivated		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemSuppressionSupport [ECUC_Dem_00793]		
Parent Container	DemGeneral		
Description	This configuration switch defines, whether support for suppression is enabled or not.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_DTC_SUPPRESSIO N	Support suppression by DTC	
	DEM_NO_SUPPRESSIO N	Suppression is not supported	
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemTaskTime [ECUC_Dem_00715]		
Parent Container	DemGeneral		
Description	<p>Allow to configure the time for the periodic cyclic task. Please note: This configuration value shall be equal to the value in the Basic Software Scheduler configuration of the RTE module.</p> <p>The AUTOSAR configuration standard is to use SI units, so this parameter is defined as float value in seconds. Dem configuration tools must convert this float value to the appropriate value format for the use in the software implementation of Dem.</p> <p>min: A negative value is not allowed.</p> <p>max: After event status was reported, processing shall be completed within 100ms in order to have the fault entry status information updated as soon as possible (e.g. for PID \$01).</p> <p>upperMultiplicity: Exactly one TaskTime must be specified per configuration.</p> <p>lowerMultiplicity: Exactly one TaskTime must be specified per configuration.</p>		
Multiplicity	1		
Type	EcucFloatParamDef		
Range]0 .. INF[
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: ECU		

Name	DemTriggerFiMReports [ECUC_Dem_00719]		
Parent Container	DemGeneral		
Description	<p>Activate/Deactivate the notification to the Function Inhibition Manager.</p> <p>true: FiM notification activated false: FiM notification deactivated</p>		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: ECU		

Name	DemTriggerMonitorInitBeforeClearOk [ECUC_Dem_00765]		
Parent Container	DemGeneral		
Description	Defines if the monitor re-initialization has to be triggered before or after the Dem module returns DEM_CLEAR_OK. true: trigger re-initialization before DEM_CLEAR_OK false: trigger re-initialization after DEM_CLEAR_OK		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemVersionInfoApi [ECUC_Dem_00721]		
Parent Container	DemGeneral		
Description	Activate/Deactivate the version information API. true: version information activated false: version information deactivated		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value	false		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemClearEventsWithoutDTCEventMemoryRef [ECUC_Dem_00941]		
Parent Container	DemGeneral		
Description	Indicating the event memory used as trigger to clear events without assigned DTCs.		
Multiplicity	0..1		
Type	Reference to DemPrimaryMemory		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants

Scope / Dependency	scope: local		

Included Containers			
Container Name	Multiplicity	Scope / Dependency	
DemClient	1..255	This container contains possible clients that are using the Dem APIs.	
DemDataElementClass	0..65535	This container contains the configuration (parameters) for an internal/external data element class.	
DemDidClass	0..65535	This container contains the configuration (parameters) for a data Id class. It is assembled out of one or several data elements.	
DemEnableCondition	0..255	This container contains the configuration (parameters) for enable conditions.	
DemEnableCondition Group	0..255	This container contains the configuration (parameters) for enable condition groups.	
DemEventMemorySet	1..255	This container is a collection of referenced event memories and related information for a Dem client.	
DemExtendedDataClass	0..65535	This class contains the combinations of extended data records for an extended data class.	
DemExtendedData RecordClass	0..253	This container contains the configuration (parameters) for an extended data record class. It is assembled out of one or several data elements.	
DemFreezeFrameClass	0..65535	This container contains the combinations of DIDs for a non OBD2 and WWH-OBD relevant freeze frame class.	

DemFreezeFrameRec NumClass	0..65535	This container contains a list of dedicated, different freeze frame record numbers assigned to an event. The order of record numbers in this list is assigned to the chronological order of the according freeze frame records.
DemFreezeFrameRecord Class	0..65535	This container contains a list of dedicated, different freeze frame record numbers.
DemGeneralJ1939	0..1	This container contains the general J1939-specific configuration (parameters) of the Dem module. If the container exists the J1939 support is enabled.
DemGeneralOBD	0..1	This container contains the general OBD-specific configuration (parameters) of the Dem module.
DemNvRamBlockId	0..*	<p>This container contains the configuration (parameters) for a non-volatile memory block, which is used from the Dem. If no permanent storage of event memory entries is required, no block needs to be configured.</p> <p>The number of blocks which are necessary depends on the implementation and configuration (e.g. number of used event memories) of the Dem module.</p>
DemOperationCycle	1..256	This container holds all parameters that are relevant to configure an operation cycle.
DemRatio	0..65535	This container contains the OBD-specific in-use-monitor performance ratio configuration. It is related to a specific event, a FID, and an IUMPR group.
DemStorageCondition	0..255	This container contains the configuration (parameters) for storage conditions.
DemStorageCondition Group	0..255	This container contains the configuration (parameters) for storage condition groups.

Figure 10.1: DemGeneral configuration overview (part I)

Figure 10.2: DemGeneral configuration overview (part II)

10.2.2.2 DemConfigSet

SWS Item	[ECUC_Dem_00634]
Container Name	DemConfigSet
Parent Container	Dem
Description	This container contains the configuration parameters and sub containers of the Dem module supporting multiple configuration sets.
Configuration Parameters	

Included Containers		
Container Name	Multiplicity	Scope / Dependency
DemComponent	0..*	This container configures the monitored components and system dependencies.
DemDTC	0..65535	This container contains the configuration (parameters) for DemUdsDTC.
DemDTCAttributes	0..65535	This container contains the configuration (parameters) for DemDTCAttributes.
DemDebounceCounter BasedClass	0..65535	This container contains the configuration of Debounce Counter Based Class
DemDebounceTimeBase Class	0..65535	This container contains the configuration of Debounce Time Based Class.
DemDtrs	0..1	This container holds the configuration of DTRs collection.
DemEventParameter	1..65535	This container contains the configuration (parameters) for events.
DemMultiEventTriggering	0..65535	Configures an event that will trigger other events whenever the event is reported.
DemObdDTC	0..65535	This container contains the configuration (parameters) for DemObdDTC.
DemPidClass	0..255	This container contains the different PIDs for the single global OBD relevant freeze frame class. It is assembled out of one or several data elements.

Figure 10.3: DemConfigSet configuration overview

10.2.2.3 DemClient

SWS Item	[ECUC_Dem_00931]
Container Name	DemClient
Parent Container	DemGeneral

Description	This container contains possible clients that are using the Dem APIs.		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Configuration Parameters			

Name	DemClientFunctionality [ECUC_Dem_00943]				
Parent Container	DemClient				
Description	Functionality provided by Dem for the DemClient.				
Multiplicity	1				
Type	EcucEnumerationParamDef				
Range	DEM_CLIENT_ONLY_USES_EVENTOVERFLOW_INTERFACE	The Dem provides only the client related functionality EvMemOverflowIndication for this client Id. Other functionality like DTFilter or Clear is not allowed to be used by this client.			
	DEM_CLIENTUSES_FULL_FUNCTIONALITY	The Dem provides all client related functionality for the selected client (e.g. clear APIs and overflow indications).			
Default Value	DEM_CLIENTUSES_FULL_FUNCTIONALITY				
Post-Build Variant Value	true				
Value Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Scope / Dependency					

Name	DemClientId [ECUC_Dem_00932]				
Parent Container	DemClient				
Description	Defines a unique identifier for a Dem client. This number is used by this client in the ClientId parameter in all API with this parameter.				
Multiplicity	1				
Type	EcucIntegerParamDef (Symbolic Name generated for this parameter)				
Range	0 .. 255				
Default Value					
Post-Build Variant Value	false				
Multiplicity Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Value Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Scope / Dependency	scope: ECU				

Name	DemClientUsesRte [ECUC_Dem_00933]		
Parent Container	DemClient		
Description	If set to true, this client shall only use the DEM via RTE (Dem will provide the C/S interfaces: Cddlf, EvMemOverflowIndication). The client must not do any C_API calls to the DEM.		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemEventMemorySetRef [ECUC_Dem_00942]		
Parent Container	DemClient		
Description	References to the client assigned event memory container that contains client specific settings and event memories.		
Multiplicity	1		
Type	Reference to DemEventMemorySet		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Included Containers		
Container Name	Multiplicity	Scope / Dependency
DemCallbackDTCStatusChanged	0..*	<p>The presence of this container indicates, that the Dem has access to a "DTCStatusChanged" callback, which the Dem will call to notify other components about the change in the status of a DTC.</p> <p>In case there is a DemCallbackDTCStatusChangedFnc, this parameter defines the name of the function that the Dem will call.</p> <p>In case there is no DemCallbackDTCStatusChangedFnc, the Dem will have an R-Port requiring the interface CallbackDTCStatusChanged whose name is generated by using the unique callback-prefix followed by the event name.</p> <p>Status change notifications are supported for DTCs in primary memory only.</p>

Figure 10.4: DemClient configuration overview

10.2.2.4 DemDTCAttributes

SWS Item	[ECUC_Dem_00641]
Container Name	DemDTCAttributes
Parent Container	DemConfigSet
Description	This container contains the configuration (parameters) for DemDTCAttributes.
Configuration Parameters	

Name	DemAgingAllowed [ECUC_Dem_00622]		
Parent Container	DemDTCAttributes		
Description	Defines if a DTC can be aged. TRUE: aging allowed FALSE: aging not allowed		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value	false		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemAgingCycleCounterThreshold [ECUC_Dem_00623]				
Parent Container	DemDTCAttributes				
Description	Number of aging cycles needed to unlearn/delete the event.				
Multiplicity	0..1				
Type	EcucIntegerParamDef				
Range	1 .. 255				
Default Value					
Post-Build Variant Multiplicity	false				
Post-Build Variant Value	false				
Multiplicity Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Value Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Scope / Dependency	scope: ECU				

Name	DemAgingCycleCounterThresholdForTFSLC [ECUC_Dem_00897]		
Parent Container	DemDTCAttributes		
Description	Number of aging cycles needed to reset the testFailedSinceLastClear Bit.		
Multiplicity	0..1		
Type	EcucIntegerParamDef		
Range	1 .. 255		
Default Value			
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemDTCPriority [ECUC_Dem_00662]		
Parent Container	DemDTCAttributes		
Description	Priority of the event/dtc, in view of full event memory. A lower value means higher priority.		
Multiplicity	1		
Type	EcucIntegerParamDef		
Range	0 .. 255		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemDTCSignificance [ECUC_Dem_00779]		
Parent Container	DemDTCAttributes		
Description	Significance of the event, which indicates additional information concerning fault classification and resolution. It can be mapped as Dem-internal data element. It shall be configured, if it is a part of event related data.		
Multiplicity	0..1		
Type	EcucEnumerationParamDef		
Range	DEM_EVENT_SIGNIFICA NCE_FAULT	failure, which affects the component/ECU itself	

Post-Build Variant Multiplicity	DEM_EVENT_SIGNIFICANCE_OCCURRENCE false	issue, which indicates additional information concerning insufficient system behavior	
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemMaxNumberFreezeFrameRecords [ECUC_Dem_00605]		
Parent Container	DemDTCAttributes		
Description	<p>This parameter defines the number of according freeze frame records, which can maximal be stored for this event. Therefore all these freeze frame records have the same freeze frame class.</p> <p>This parameter is only required for calculated record numeration (refer to DemTypeOfFreezeFrameRecordNumeration).</p>		
Multiplicity	0..1		
Type	EcclIntegerParamDef		
Range	0 .. 255		
Default Value			
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemAgingCycleRef [ECUC_Dem_00624]		
Parent Container	DemDTCAttributes		
Description	Reference to the cycle which is triggering the aging of the event.		
Multiplicity	0..1		
Type	Reference to DemOperationCycle		
Post-Build Variant Multiplicity	false		

Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemExtendedDataClassRef [ECUC_Dem_00667]		
Parent Container	DemDTCAttributes		
Description	This reference defines the link to an extended data class sampler.		
Multiplicity	0..1		
Type	Reference to DemExtendedDataClass		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency			

Name	DemFreezeFrameClassRef [ECUC_Dem_00674]		
Parent Container	DemDTCAttributes		
Description	These references define the links to a freeze frame class sampler.		
Multiplicity	0..1		
Type	Reference to DemFreezeFrameClass		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency			

Name	DemFreezeFrameRecNumClassRef [ECUC_Dem_00776]		
Parent Container	DemDTCAttributes		
Description	<p>This parameter defines the list of dedicated freeze frame record numbers associated with the diagnostic event. These record numbers are assigned to the freeze frame records (instead of calculated record numbers).</p> <p>This parameter is only required for configured record numeration (refer to DemTypeOfFreezeFrameRecordNumeration).</p>		
Multiplicity	0..1		
Type	Reference to DemFreezeFrameRecNumClass		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time Link time Post-build time	X	All Variants
Value Configuration Class	Pre-compile time Link time Post-build time	X	All Variants
Scope / Dependency	scope: ECU		

Name	DemJ1939ExpandedFreezeFrameClassRef [ECUC_Dem_00834]		
Parent Container	DemDTCAttributes		
Description	These references define the links to a J1939 freeze frame class sampler.		
Multiplicity	0..1		
Type	Reference to DemJ1939FreezeFrameClass		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time Link time Post-build time	X	All Variants
Value Configuration Class	Pre-compile time Link time Post-build time	X	All Variants
Scope / Dependency			

Name	DemJ1939FreezeFrameClassRef [ECUC_Dem_00835]		
Parent Container	DemDTCAttributes		
Description	These references define the links to a J1939 freeze frame class sampler.		
Multiplicity	0..1		
Type	Reference to DemJ1939FreezeFrameClass		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false

10.2.2.5 DemEventParameter

SWS Item	[ECUC_Dem_00661]
Container Name	DemEventParameter
Parent Container	DemConfigSet
Description	This container contains the configuration (parameters) for events.
Configuration Parameters	

Name	DemCausalityDelayTime [ECUC_Dem_00921]		
Parent Container	DemEventParameter		
Description	Time to wait until the event is considered as causal. The parameter is specified in seconds.		
Multiplicity	0..1		
Type	EcucFloatParamDef		
Range	[0 .. 2.5]		
Default Value	0		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemComponentPriority [ECUC_Dem_00909]		
Parent Container	DemEventParameter		
Description	Specifies the priority within the component. A lower value means higher priority.		
Multiplicity	0..1		
Type	EcucIntegerParamDef		
Range	0 .. 255		
Default Value			
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemEventAssociatedIdentification [ECUC_Dem_00969]		
Parent Container	DemEventParameter		
Description	Event associated identifier that allows to identify an event. This value can be reported as internal data element in snapshot records or extended data records.		
Multiplicity	0..1		
Type	EcucIntegerParamDef		
Range	0 .. 65535		
Default Value			
Post-Build Variant Value	true		
Value Configuration Class	Pre-compile time	X	VARIANT-PRE-COMPIL
	Link time	—	
	Post-build time	X	VARIANT-POST-BUILD
Scope / Dependency	scope: ECU		

Name	DemEventAvailable [ECUC_Dem_00792]		
Parent Container	DemEventParameter		
Description	This parameter configures an Event as unavailable. It is treated by Dem as if it does not exist. true = Event is available false = Event is not available		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	true		
Value Configuration Class	Pre-compile time	X	VARIANT-PRE-COMPIL
	Link time	—	
	Post-build time	X	VARIANT-POST-BUILD
Scope / Dependency	scope: ECU		

Name	DemEventAvailableInVariant [ECUC_Dem_00968]		
Parent Container	DemEventParameter		
Description	This parameter defines the enabled or disabled status of an event. If set to FALSE, the Event is generally disabled, even though the SW-C is integrated and the Event is described in the ECUC. The Dem shall ignore all calls from the SW-C. If set to TRUE, the availability of the event depends on other availability sources.		
Multiplicity	0..1		
Type	EcucBooleanParamDef		
Default Value	true		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	true		

Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	VARIANT-PRE-COMPIL
	Link time	—	
	Post-build time	X	VARIANT-POST-BUILD
Scope / Dependency	scope: ECU		

Name	DemEventConfirmationThreshold [ECUC_Dem_00924]		
Parent Container	DemEventParameter		
Description	Defines the operation cycle threshold of the DTC confirmation status according "Confirmation Threshold" of ISO 14229-1.		
Multiplicity	1		
Type	EcucIntegerParamDef		
Range	1 .. 255		
Default Value	1		
Post-Build Variant Value	true		
Value Configuration Class	Pre-compile time	X	VARIANT-PRE-COMPIL
	Link time	—	
	Post-build time	X	VARIANT-POST-BUILD
Scope / Dependency	scope: ECU		

Name	DemEventConfirmationThresholdCounterAdaptable [ECUC_Dem_00929]		
Parent Container	DemEventParameter		
Description	Indicates whether the events confirmation Cycle threshold can be adapted by Dem_SetEventConfirmationThresholdCounter.		
Multiplicity	0..1		
Type	EcucBooleanParamDef		
Default Value	false		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemEventId [ECUC_Dem_00659]		
Parent Container	DemEventParameter		
Description	<p>Unique identifier of a diagnostic event.</p> <p>This parameter should not be changeable by user, because the Id should be generated by Dem itself to prevent gaps and multiple use of an Id. The events should be sequentially ordered beginning with 1 and no gaps in between.</p>		
Multiplicity	1		
Type	EcucIntegerParamDef (Symbolic Name generated for this parameter)		
Range	1 .. 65535		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: ECU		

Name	DemEventKind [ECUC_Dem_00660]		
Parent Container	DemEventParameter		
Description	This parameter is used to distinguish between SW-C and BSW events.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_EVENT_KIND_BSW	The event is assigned to a BSW module	
Post-Build Variant Value	DEM_EVENT_KIND_SWC	The event is assigned to a SW-C module	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency			

Name	DemEventRecoverableInSameOperationCycle [ECUC_Dem_00916]		
Parent Container	DemEventParameter		
Description	If parameter is configured to FALSE, reporting of PASSED will be ignored if the event is already "testfailed this operation cycle".		
Multiplicity	0..1		
Type	EcucBooleanParamDef		
Default Value	true		
Post-Build Variant Value	true		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: ECU		

Name	DemEventReportingType [ECUC_Dem_00970]				
Parent Container	DemEventParameter				
Description	<p>This parameter defines the way a monitor can report an event to the Dem. There are various ways to report an event and the Dem provides different APIs for it.</p> <p>Tags: atp.Status=draft</p>				
Multiplicity	1				
Type	EcucEnumerationParamDef				
Range	IMMEDIATE_FAIL_AND_SYNCHRONOUS_PROCESSING	<p>The event is reported over the API Dem_SetEventFailedWithSyncFreezeFrame.</p> <p>Tags: atp.Status=draft</p>			
	STANDARD_REPORTING	<p>The event is reported over the API Dem_SetEventStatus.</p> <p>Tags: atp.Status=draft</p>			
	STANDARD_REPORTING_WITH_MONITOR_DATA	<p>The event is reported over the API Dem_SetEventStatusWithMonitorData.</p> <p>Tags: atp.Status=draft</p>			
Default Value	STANDARD_REPORTING				
Post-Build Variant Value	false				
Value Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Scope / Dependency	scope: local				

Name	DemFFPrestorageInNvm [ECUC_Dem_00948]		
Parent Container	DemEventParameter		
Description	<p>If the event uses a pre-stored freeze-frame this attribute indicates if the event requires the pre-stored data to be stored in non-volatile memory. TRUE = store the pre-stored data in non-volatile memory, FALSE = pre-stored data is not stored in non-volatile memory.</p>		
Multiplicity	0..1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemFFPrestorageSupported [ECUC_Dem_00671]		
Parent Container	DemEventParameter		
Description	If this parameter is set to true, then the Prestorage of FreezeFrames is supported by the assigned event. This parameter is useful to calculate the buffer size.		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemReportBehavior [ECUC_Dem_00894]				
Parent Container	DemEventParameter				
Description	Indicates the reporting behavior of the BSW Module (DemEventKind == DEM_EVENT_KIND_BSW) in order to determine the size of the reporting queue. If the parameter is not defined it means REPORT_BEFORE_INIT.				
Multiplicity	0..1				
Type	EcucEnumerationParamDef				
Range	REPORT_AFTER_INIT	Indicates that the Event will not be reported before Dem_Init().			
	REPORT_BEFORE_INIT	Indicates that the Event may be reported before Dem_Init().			
Default Value	REPORT_BEFORE_INIT				
Post-Build Variant Multiplicity	false				
Post-Build Variant Value	false				
Multiplicity Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Value Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Scope / Dependency	scope: local				

Name	DemComponentClassRef [ECUC_Dem_00908]		
Parent Container	DemEventParameter		
Description	Reference to the monitored component.		
Multiplicity	0..1		
Type	Reference to DemComponent		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemDTCRef [ECUC_Dem_00888]		
Parent Container	DemEventParameter		
Description	<p>This parameter defines the DTC configuration (typically Uds) associated with the diagnostic event.</p> <p>It is allowed to have events without a DTC (e.g. for ECU-internal events triggering safety reactions without being reported via diagnostic communication). The same DemDTCAttributes can be used from several events, to combine these (refer to chapter "Combination of diagnostic event").</p>		
Multiplicity	0..1		
Type	Reference to DemDTC		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency			

Name	DemEnableConditionGroupRef [ECUC_Dem_00746]		
Parent Container	DemEventParameter		
Description	References an enable condition group.		
Multiplicity	0..1		
Type	Reference to DemEnableConditionGroup		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemOBDGroupingAssociativeEventsRef [ECUC_Dem_00839]		
Parent Container	DemEventParameter		
Description	This parameter defines a reference which points to a representative event of one group of associate events. The "reverence event" must refer to it self. Note: One event is only allowed to be referenced to only one group of associate events.		
Multiplicity	0..1		
Type	Reference to DemEventParameter		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemOperationCycleRef [ECUC_Dem_00702]		
Parent Container	DemEventParameter		
Description	Kind of operation cycle for the event (e.g. power cycle, driving cycle, ...)		
Multiplicity	1		
Type	Reference to DemOperationCycle		
Post-Build Variant Value	false		

Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemStorageConditionGroupRef [ECUC_Dem_00769]		
Parent Container	DemEventParameter		
Description	References a storage condition group.		
Multiplicity	0..1		
Type	Reference to DemStorageConditionGroup		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Included Containers			
Container Name	Multiplicity	Scope / Dependency	
DemCallbackClearEventAllowed	0..1	<p>The presence of this container indicates that the Dem has access to a "ClearEventAllowed" callback.</p> <p>In case there is a DemCallbackClearEventAllowedFnc, this parameter defines the name of the function that the Dem will call.</p> <p>In case there is no DemCallbackClearEventAllowedFnc, the Dem will have an R-Port requiring the interface CallbackClearEventAllowed whose name is generated by using the unique callback-prefix followed by the event name.</p>	
DemCallbackEventDataChanged	0..1	<p>The presence of this container indicates that the Dem has access to an "EventDataChanged" callback.</p> <p>In case there is a DemCallbackEventDataChangedFnc, this parameter defines the name of the function that the Dem will call.</p> <p>In case there is no DemCallbackEventDataChangedFnc, the Dem will have an R-Port requiring the interface CallbackEventDataChanged whose name is generated by using the unique callback-prefix followed by the event name.</p>	

DemCallbackEventSync StorageProcessed	0..1	<p>The presence of this container indicates that the Dem will call the configured callback after an event status reported with Dem_SetEventFailedWithSyncFreezeFrame is finished and the Dem is ready to process a next call for this event.</p> <p>Tags: atp.Status=draft</p>
DemCallbackEventUds StatusChanged	0..*	<p>The presence of this container indicates, that the Dem has access to an "EventUdsStatusChanged" callback, which the Dem will call to notify other components about the change in the status of an event.</p> <p>In case there is a DemCallbackEventUdsStatusChangedFnc, this parameter defines the name of the function that the Dem will call.</p> <p>In case there is no DemCallbackEventUdsStatusChangedFnc, the Dem will have an R-Port requiring the interface CallbackEventUdsStatusChanged, whose name is generated by using the unique callback-prefix followed by the event name.</p>
DemCallbackInitMForE	0..1	<p>The presence of this container indicates, that the Dem has access to an "InitMonitorForEvent" callback, which the Dem will call to initialize a monitor.</p> <p>In case the container has a DemCallbackInitMForEFnc, this parameter defines the name of the function that the Dem will call.</p> <p>In case there is no DemCallbackInitMForEFnc, the Dem will have an R-Port requiring the interface CallbackInitMonitorForEvent, whose name is generated by using the unique callback-prefix followed by the event name.</p>
DemCallbackMonitor StatusChanged	0..*	<p>The presence of this container indicates, that the Dem has access to an "MonitorStatusChanged" callback, which the Dem will call to notify other components about the change in the status of an event.</p> <p>In case there is a DemCallbackMonitorStatusChangedFnc, this parameter defines the name of the function that the Dem will call.</p> <p>In case there is no DemCallbackMonitorStatusChangedFnc, the Dem will have an R-Port requiring the interface CallbackMonitorStatusChanged, whose name is generated by using the unique callback-prefix followed by the event name.</p>

DemDebounceAlgorithm Class	1	Debounce algorithm class: counter based, time based, or monitor internal.
DemIndicatorAttribute	0..255	This container contains the event specific configuration of Indicators.

10.2.2.6 DemMultiEventTriggering

SWS Item	[ECUC_Dem_00944]
Container Name	DemMultiEventTriggering
Parent Container	DemConfigSet
Description	Configures an event that will trigger other events whenever the event is reported.
Configuration Parameters	

Name	DemMultiEventTriggeringMasterEventRef [ECUC_Dem_00945]		
Parent Container	DemMultiEventTriggering		
Description	Reference to the event that will trigger other events upon reception of this event.		
Multiplicity	1		
Type	Reference to DemEventParameter		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemMultiEventTriggeringSlaveEventRef [ECUC_Dem_00946]		
Parent Container	DemMultiEventTriggering		
Description	Reference to the event that is triggered upon triggering the master event.		
Multiplicity	1..255		
Type	Reference to DemEventParameter		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU

10.2.2.7 DemComponent

SWS Item	[ECUC_Dem_00904]
Container Name	DemComponent
Parent Container	DemConfigSet
Description	This container configures the monitored components and system dependencies.
Configuration Parameters	

Name	DemComponentFailedCallbackFnc [ECUC_Dem_00906]		
Parent Container	DemComponent		
Description	Specifies the function to be called on component failed status changes.		
Multiplicity	0..1		
Type	EcucFunctionNameDef		
Default Value			
Regular Expression			
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemComponentFailedCallbackUsePort [ECUC_Dem_00947]		
Parent Container	DemComponent		
Description	Specifies whether CBStatusComp_{ComponentName} for component change notifications shall be provided.		
Multiplicity	0..1		
Type	EcucFunctionNameDef		
Default Value	false		
Regular Expression			
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	

Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemComponentId [ECUC_Dem_00930]		
Parent Container	DemComponent		
Description	<p>Unique identifier of a DemComponent.</p> <p>Component Id should be configured in sequential order beginning with 1 and no gaps in between. This parameter should not be changeable by user, because the Id should be generated by Dem itself to prevent gaps and multiple use of an Id</p>		
Multiplicity	1		
Type	EcucIntegerParamDef (Symbolic Name generated for this parameter)		
Range	1 .. 65535		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemComponentIgnoresPriority [ECUC_Dem_00905]		
Parent Container	DemComponent		
Description	This configuration switch defines, whether the priority of events at this component shall be ignored.		
Multiplicity	0..1		
Type	EcucBooleanParamDef		
Default Value	false		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—

10.2.2.8 DemDTC

SWS Item	[ECUC_Dem_00886]
Container Name	DemDTC
Parent Container	DemConfigSet

Description	This container contains the configuration (parameters) for DemUdsDTC.
Configuration Parameters	

Name	DemDTCFunctionalUnit [ECUC_Dem_00643]		
Parent Container	DemDTC		
Description	<p>DTCFunctionalUnit is a 1-byte value which identifies the corresponding basic vehicle / system function which reports the DTC. This parameter is necessary for the report of severity information.</p> <p>If this parameter is configured for no DTC, the Dem provides no DTC functional unit information.</p>		
Multiplicity	0..1		
Type	EcucIntegerParamDef		
Range	0 .. 255		
Default Value			
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemDTCSeverity [ECUC_Dem_00645]		
Parent Container	DemDTC		
Description	<p>DTC severity according to ISO 14229-1. This parameter depends on the automotive manufacturer.</p> <p>If it is not configured, the value is counted as 'no severity'. If this parameter is configured for no DTC, the Dem provides no DTC severity information.</p>		
Multiplicity	0..1		
Type	EcucEnumerationParamDef		
Range	DEM_SEVERITY_CHECK_AT_NEXT_HALT	Check at next halt	
	DEM_SEVERITY_CHECK_IMMEDIATELY	Check immediately	
	DEM_SEVERITY_MAINTENANCE_ONLY	Maintenance required	
	DEM_SEVERITY_NO_SEVERITY	No severity information available	
Default Value	DEM_SEVERITY_NO_SEVERITY		

Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemDtcValue [ECUC_Dem_00887]		
Parent Container	DemDTC		
Description	Unique Diagnostic Trouble Code value for UDS (Range: 0x000000 and 0xFFFFFFF are reserved for DTC groups by ISO 14229-1)		
Multiplicity	0..1		
Type	EcucIntegerParamDef		
Range	1 .. 16777214		
Default Value			
Post-Build Variant Multiplicity	true		
Post-Build Variant Value	true		
Multiplicity Configuration Class	Pre-compile time	X	VARIANT-PRE-COMPIL
	Link time	—	
	Post-build time	X	VARIANT-POST-BUILD
Value Configuration Class	Pre-compile time	X	VARIANT-PRE-COMPIL
	Link time	—	
	Post-build time	X	VARIANT-POST-BUILD
Scope / Dependency	scope: ECU		

Name	DemNvStorageStrategy [ECUC_Dem_00127]		
Parent Container	DemDTC		
Description	This parameter defines when a specific event memory entry is allowed to be stored in the NVRAM.		
Multiplicity	0..1		
Type	EcucEnumerationParamDef		
Range	DURING_SHUTDOWN	write during shutdown	
	IMMEDIATE_AT_FIRST_OCCURRENCE	write at first fail occurrence and during shutdown	
Default Value	DURING_SHUTDOWN		

Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemWWHOBDDTCClass [ECUC_Dem_00912]				
Parent Container	DemDTC				
Description	DTC Class according to ISO 14229-1 [2013 version]. This parameter depends on the automotive manufacturer. If it is not configured, the value is marked as 'unclassified'. If this parameter is configured for no DTC, the Dem provides no DTC WWHOBD class information.				
Multiplicity	0..1				
Type	EcucEnumerationParamDef				
Range	DEM_DTC_WWHOBD_C_LASS_A	Class A			
	DEM_DTC_WWHOBD_C_LASS_B1	Class B1			
	DEM_DTC_WWHOBD_C_LASS_B2	Class B2			
	DEM_DTC_WWHOBD_C_LASS_C	Class C			
	DEM_DTC_WWHOBD_C_LASS_NOCLASS	No Class information			
Post-Build Variant Multiplicity	false				
Post-Build Variant Value	false				
Multiplicity Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Value Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Scope / Dependency	scope: ECU				

Name	DemDTCAttributesRef [ECUC_Dem_00642]		
Parent Container	DemDTC		
Description	This parameter defines the DTC Attributes associated with the DemDTC.		
Multiplicity	1		
Type	Reference to DemDTCAttributes		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency			

Name	DemObdDTCRef [ECUC_Dem_00889]		
Parent Container	DemDTC		
Description	This parameter defines the OBD DTC configuration associated with the DemDTC. It is allowed to have events without a OBD DTC.		
Multiplicity	0..1		
Type	Reference to DemObdDTC		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency			

No Included Containers

Figure 10.11: DemDTC configuration overview

10.2.2.9 DemGroupOfDTC

SWS Item	[ECUC_Dem_00679]
Container Name	DemGroupOfDTC
Parent Container	DemPrimaryMemory , DemUserDefinedMemory
Description	This container contains the configuration (parameters) for DTC groups.
Configuration Parameters	

Name	DemGroupDTCs [ECUC_Dem_00678]		
Parent Container	DemGroupOfDTC		
Description	DTC values of the selected group of DTC (Range: 3 byte, 0xFFFFFFF is reserved for 'all DTCs', according to ISO14229-1 Annex D.1) The DTC group 'all DTCs' is always available and will not be configured. The following ranges are reserved by ISO 14229-1 : 0x000000 to 0x0000ff and 0xfffff00 to 0xffffffff.		
Multiplicity	1		
Type	EcucIntegerParamDef		
Range	256 .. 16776959		
Default Value			
Post-Build Variant Value	true		
Value Configuration Class	Pre-compile time	X	VARIANT-PRE-COMPIL
	Link time	-	
	Post-build time	X	VARIANT-POST-BUILD
Scope / Dependency	scope: ECU		

No Included Containers

10.2.2.10 DemOperationCycle

SWS Item	[ECUC_Dem_00701]
Container Name	DemOperationCycle
Parent Container	DemGeneral
Description	This container holds all parameters that are relevant to configure an operation cycle.
Configuration Parameters	

Name	DemOperationCycleId [ECUC_Dem_00898]		
Parent Container	DemOperationCycle		
Description	This parameter's value is used, together with the aggregating container, to define a symbolic name of the operation cycle.		
Multiplicity	1		
Type	EcclIntegerParamDef (Symbolic Name generated for this parameter)		
Range	0 .. 255		
Default Value			
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemLeadingCycleRef [ECUC_Dem_00919]		
Parent Container	DemOperationCycle		
Description	Defines the operation cycle, which is relevant for processing this operation cycle.		
Multiplicity	0..1		
Type	Symbolic name reference to DemOperationCycle		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency

10.2.2.11 DemIndicator

SWS Item	[ECUC_Dem_00680]
Container Name	DemIndicator
Parent Container	DemEventMemorySet

Description	This container contains the configuration (parameters) for Indicators.	
Configuration Parameters		

Name	DemIndicatorID [ECUC_Dem_00683]		
Parent Container	DemIndicator		
Description	Unique identifier of an indicator.		
Multiplicity	1		
Type	EcucIntegerParamDef (Symbolic Name generated for this parameter)		
Range	0 .. 255		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: ECU		

No Included Containers

10.2.2.12 DemIndicatorAttribute

SWS Item	[ECUC_Dem_00681]		
Container Name	DemIndicatorAttribute		
Parent Container	DemEventParameter		
Description	This container contains the event specific configuration of Indicators.		
Configuration Parameters			

Name	DemIndicatorBehaviour [ECUC_Dem_00682]		
Parent Container	DemIndicatorAttribute		
Description	Behaviour of the linked indicator		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_INDICATOR_BLINKING	The indicator blinks when the event has status FAILED Not relevant with J1939.	
	DEM_INDICATOR_BLINK_CONT	The indicator is active and blinks when the event has status FAILED Not relevant with J1939.	
	DEM_INDICATOR_CONTINUOUS	The indicator is active when the even has status FAILED	
	DEM_INDICATOR_FAST_FLASH	Flash Indicator Lamp should be set to 'Fast Flash'	
	DEM_INDICATOR_SLOW_FLASH	Flash Indicator Lamp should be set to 'Slow Flash'	

Post-Build Variant Value	true		
Value Configuration Class	Pre-compile time	X	VARIANT-PRE-COMPIL
	Link time	-	
	Post-build time	X	VARIANT-POST-BUILD
Scope / Dependency	scope: ECU		

Name	DemIndicatorFailureCycleCounterThreshold [ECUC_Dem_00750]		
Parent Container	DemIndicatorAttribute		
Description	Defines the number of failure cycles for the WarningIndicatorOnCriteria.		
Multiplicity	0..1		
Type	EcucIntegerParamDef		
Range Default Value	1 .. 255		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants

10.2.3 OBD

10.2.3.1 DemGeneralOBD

SWS Item	[ECUC_Dem_00756]
Container Name	DemGeneralOBD
Parent Container	DemGeneral
Description	This container contains the general OBD-specific configuration (parameters) of the Dem module.
Configuration Parameters	

Name	DemOBDCentralizedPID21Handling [ECUC_Dem_00794]		
Parent Container	DemGeneralOBD		
Description	<p>Switch to enable the centralized handling of PID \$21.</p> <p>true: centralized handling of PID \$21 enabled</p> <p>false: centralized handling of PID \$21 disabled</p>		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time Link time Post-build time	X — —	All Variants
Scope / Dependency	scope: ECU		

Name	DemOBDCentralizedPID31Handling [ECUC_Dem_00879]		
Parent Container	DemGeneralOBD		
Description	<p>Switch to enable the centralized handling of PID \$31.</p> <p>true: centralized handling of PID \$31 enabled</p> <p>false: centralized handling of PID \$31 disabled</p>		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time Link time Post-build time	X — —	All Variants
Scope / Dependency	scope: ECU		

Name	DemOBDCCompliance [ECUC_Dem_00795]		
Parent Container	DemGeneralOBD		
Description	Configuration value to define the appropriate value to PID\$1C "OBD requirements to which vehicle or engine is certified." according to the respective standards, e.g. OBD, OBDII, JOBD etc. Notice as well J1979 or the "DiagnosticReadiness 1" DM05 message of J1939-73		
Multiplicity	1		
Type	EcucIntegerParamDef		
Range	0 .. 255		
Default Value

10.2.3.2 DemObdDTC

SWS Item	[ECUC_Dem_00884]
Container Name	DemObdDTC
Parent Container	DemConfigSet
Description	This container contains the configuration (parameters) for DemObdDTC.
Configuration Parameters	

Name	DemConsiderPtoStatus [ECUC_Dem_00602]		
Parent Container	DemObdDTC		
Description	This parameter is TRUE, when the event is affected by the Dem PTO handling.		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemDtcValue [ECUC_Dem_00885]		
Parent Container	DemObdDTC		
Description	Unique Diagnostic Trouble Code value for OBD		
Multiplicity	0..1		
Type	EcucIntegerParamDef		
Range	1 .. 65535		
Default Value			
Post-Build Variant Multiplicity	true		
Post-Build Variant Value	true		
Multiplicity Configuration Class	Pre-compile time	X	VARIANT-PRE-COMPIL

10.2.3.3 DemRatio

SWS Item	[ECUC_Dem_00734]
Container Name	DemRatio
Parent Container	DemGeneral
Description	This container contains the OBD-specific in-use-monitor performance ratio configuration. It is related to a specific event, a FID, and an IUMPR group.
Configuration Parameters	

Name	DemIUMPRDenGroup [ECUC_Dem_00838]		
Parent Container	DemRatio		
Description	This parameter specifies the assigned denominator type which is applied in addition to the DEM_IUMPR_GENERAL_INDIVIDUAL_DENOMINATOR conditions.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_IUMPR_DEN_500M ILL	Additional condition based on definition of 500miles conditions as defined for OBD2.	
	DEM_IUMPR_DEN_COL DSTART	Additional condition based on definition of "cold start" as defined for EU5+	
	DEM_IUMPR_DEN_EVAP	Additional condition based on definition of "EVAP" conditions as defined for OBD2.	
	DEM_IUMPR_DEN_NON E	No further condition. Denominator increments based on GEN-ERAL_INDIVIDUAL_DENOMINATOR only.	
	DEM_IUMPR_DEN_PHYS _API	Additional physical condition (component activity) computed within the SW-C and reported via Dem_ReplUMPRDenRelease.	
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemIUMPRGroup [ECUC_Dem_00737]		
Parent Container	DemRatio		
Description	This parameter specifies the assigned IUMPR group of the ratio Id.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_IUMPR_AFRI1	Air Fuel Ratio Imbalance Monitor Bank 1	
	DEM_IUMPR_AFRI2	Air Fuel Ratio Imbalance Monitor Bank 2	
	DEM_IUMPR_BOOSTPRS		
	DEM_IUMPR_CAT1		
	DEM_IUMPR_CAT2

10.2.3.4 DemDtrs

SWS Item	[ECUC_Dem_00913]
Container Name	DemDtrs
Parent Container	DemConfigSet
Description	This container holds the configuration of DTRs collection.
Configuration Parameters	

Included Containers		
Container Name	Multiplicity	Scope / Dependency
DemDtr	0..65535	This container holds the configuration of one individual DTR.

10.2.3.5 DemDtr

SWS Item	[ECUC_Dem_00806]
Container Name	DemDtr
Parent Container	DemDtrs
Description	This container holds the configuration of one individual DTR.
Configuration Parameters	

Name	DemDtrCompuDenominator0 [ECUC_Dem_00815]		
Parent Container	DemDtr		
Description	Part of the conversion between the binary representation and the physical meaning analogous to the SW-C Template conversion CompuRationalCoeffs with 2 numerator coefficients and 1 denominator coefficient in the direction compulInternalToPhys. This is the only one supported denominator value, a constant divisor. The value 0 is not allowed.		
Multiplicity	1		
Type	EcucFloatParamDef		
Range	[-INF .. INF]		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: ECU		

Name	DemDtrCompuNumerator0 [ECUC_Dem_00813]		
Parent Container	DemDtr		
Description	Part of the conversion between the binary representation and the physical meaning analogous to the SW-C Template conversion CompuRationalCoeffs with 2 numerator coefficients and 1 denominator coefficient in the direction compuInternalToPhys. This is the first numerator value, which is multiplied with x^0 , i.e., the offset.		
Multiplicity	1		
Type	EcucFloatParamDef		
Range	[-INF .. INF]		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: ECU		

Name	DemDtrCompuNumerator1 [ECUC_Dem_00814]		
Parent Container	DemDtr		
Description	Part of the conversion between the binary representation and the physical meaning analogous to the SW-C Template conversion CompuRationalCoeffs with 2 numerator coefficients and 1 denominator coefficient in the direction compuInternalToPhys. This is the second numerator value, which is multiplied with x^1 , i.e., the factor.		
Multiplicity	1		
Type	EcucFloatParamDef		
Range	[-INF .. INF]		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: ECU		

Name	DemDtrId [ECUC_Dem_00807]		
Parent Container	DemDtr		
Description	The index identifier value assigned to this DTR. The value is generated during the Dem configuration process.		
Multiplicity	1		
Type	EcucIntegerParamDef (Symbolic Name generated for this parameter)		
Range	0 .. 65535		
Default Value			
Post-Build Variant Value	false		

Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemDtrMid [ECUC_Dem_00809]		
Parent Container	DemDtr		
Description	<p>The OBDMID of the DTR.</p> <p>The values 0x00, 0x20, 0x40, 0x60, 0x80, 0xA0, 0xC0, 0xE0 are reserved.</p>

Included Containers		
Container Name	Multiplicity	Scope / Dependency
DemCallbackJ1939DTC StatusChanged	0..*	<p>The presence of this container indicates, that the Dem has access to a "DTCStatusChanged" callback, which the Dem will call to notify other components about the change in the status of a DTC.</p> <p>In case there is a DemCallbackDTCSatusChangedFnc, this parameter defines the name of the function that the Dem will call.</p> <p>In case there is no DemCallbackDTCSatusChangedFnc, the Dem will have an R-Port requiring the interface CallbackDTCSatusChanged whose name is generated by using the unique callback-prefix followed by the event name.</p> <p>Status change notifications are supported for DTCs in primary memory only.</p>
DemJ1939FreezeFrame Class	0..255	This container contains the combinations of SPNs s for a J1939 relevant freeze frame.
DemSPNClass	0..*	This container contains the configuration (parameters) for a SPN.

Figure 10.22: DemGeneralJ19139 configuration overview

10.2.4.2 DemJ1939FreezeFrameClass

SWS Item	[ECUC_Dem_00828]
Container Name	DemJ1939FreezeFrameClass
Parent Container	DemGeneralJ1939
Description	This container contains the combinations of SPNs s for a J1939 relevant freeze frame.
Configuration Parameters	

Name	DemSPNClassRef [ECUC_Dem_00829]		
Parent Container	DemJ1939FreezeFrameClass		
Description	Reference to an SPN. This reference defines requiresIndex = true since it represents a ordered list of references where the order describes the order of single SPNs in the J1939 Freeze Frame. Attributes: requiresIndex=true		
Multiplicity	1..255		
Type	Reference to DemSPNClass		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants
	Link time	—

10.2.5 Conditions

10.2.5.1 DemEnableCondition

SWS Item	[ECUC_Dem_00653]
Container Name	DemEnableCondition
Parent Container	DemGeneral
Description	This container contains the configuration (parameters) for enable conditions.
Configuration Parameters	

Name	DemEnableConditionId [ECUC_Dem_00654]	
Parent Container	DemEnableCondition	
Description	<p>Defines a unique enable condition Id.</p> <p>This parameter should not be changeable by user, because the Id should be generated by Dem itself to prevent gaps and multiple use of an Id. The enable conditions should be sequentially ordered beginning with 0 and no gaps in between.</p>	
Multiplicity	1	
Type	EcuIntegerParamDef (Symbolic Name generated for this parameter)	
Range	0 .. 255	
Default Value		
Post-Build Variant Value	false	

Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemEnableConditionStatus [ECUC_Dem_00656]		
Parent Container	DemEnableCondition		
Description	<p>Defines the initial status for enable or disable of acceptance of event reports of a diagnostic event.</p> <p>The value is the initialization after power up (before this condition is reported the first time). true: acceptance of a diagnostic event enabled false: acceptance of a diagnostic event disabled</p>		
Multiplicity	1

10.2.5.3 DemStorageCondition

SWS Item	[ECUC_Dem_00728]
Container Name	DemStorageCondition
Parent Container	DemGeneral
Description	This container contains the configuration (parameters) for storage conditions.
Configuration Parameters	

Name	DemStorageConditionId [ECUC_Dem_00730]		
Parent Container	DemStorageCondition		
Description	Defines a unique storage condition Id. This parameter should not be changeable by user, because the Id should be generated by Dem itself to prevent gaps and multiple use of an Id. The storage conditions should be sequentially ordered beginning with 0 and no gaps in between.		
Multiplicity	1		
Type	EcucIntegerParamDef (Symbolic Name generated for this parameter)

10.2.6 Event Memory

10.2.6.1 DemEventMemorySet

SWS Item	[ECUC_Dem_00939]
Container Name	DemEventMemorySet
Parent Container	DemGeneral
Description	This container is a collection of referenced event memories and related information for a Dem client.
Configuration Parameters	

Name	DemMaxNumberEventEntryPermanent [ECUC_Dem_00689]		
Parent Container	DemEventMemorySet		
Description	<p>Maximum number of events which can be stored in the permanent memory.</p> <p>The assignment of an event to this memory type is dynamic and used for emission-related events only.</p>		
Multiplicity	1		
Type	EcucIntegerParamDef		
Range	0 .. 255		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time Link time Post-build time	X — —	All Variants
Scope / Dependency	scope: ECU		

Name	DemTypeOfDTCSupported [ECUC_Dem_00720]		
Parent Container	DemEventMemorySet		
Description	<p>This parameter defines the format returned by Dem_GetTranslationType and does not relate to/influence the supported Dem functionality.</p>		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_DTC_TRANSLATIO N_ISO11992_4 DEM_DTC_TRANSLATIO N_ISO14229_1 DEM_DTC_TRANSLATIO N_ISO15031_6 DEM_DTC_TRANSLATIO N_SAEJ1939_73 DEM_DTC_TRANSLATIO N_SAE_J2012_DA_DTCFormat_04 ORMAT_04	ISO11992-4 DTC format ISO14229-1 DTC format (3 byte format) ISO15031-6 DTC format = SAE_J2012-DA_DTCFormat_00 (2 byte format) SAEJ1939-73 DTC format SAE_J2012-DA_DTCFormat_00 (3 byte format)

10.2.6.2 DemPrimaryMemory

SWS Item	[ECUC_Dem_00901]
Container Name	DemPrimaryMemory
Parent Container	DemEventMemorySet

Description	This container contains the primary event memory specific parameters of the Dem module.		
Configuration Parameters			

Name	DemDtcStatusAvailabilityMask [ECUC_Dem_00652]		
Parent Container	DemPrimaryMemory		
Description	Mask for the supported DTC status bits by the Dem. This mask is used in the positive response of UDS service 0x19.		
Multiplicity	1		
Type	EcucIntegerParamDef		
Range	0 .. 255		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemEnvironmentDataCapture [ECUC_Dem_00895]		
Parent Container	DemPrimaryMemory		
Description	DemEnvironmentDataCapture defines the point in time, when the data actually is captured.		
Multiplicity	0..1		
Type	EcucEnumerationParamDef		
Range	DEM_CAPTURE_ASYNC HRONOUS_TO_REPORTING	The data capturing is postponed to the next cycle of the Dem_Mainfunction. (This means that there is a minimum delay between report of the failure and capturing the data).	
	DEM_CAPTURE_SYNCHRONOUS_TO_REPORTING	The data is captured immediately within the context of Dem_SetEventStatus.	
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time	X	All Variants

	Post-build time	—	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemEventDisplacementStrategy [ECUC_Dem_00742]		
Parent Container	DemPrimaryMemory		
Description	This configuration switch defines, whether support for event displacement is enabled or not, and which displacement strategy is followed.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_DISPLACEMENT_FULL	Event memory entry displacement is enabled, by consideration of priority active/passive status, and occurrence.	
	DEM_DISPLACEMENT_NONE	Event memory entry displacement is disabled.	
	DEM_DISPLACEMENT_PARIO_OCC	Event memory entry displacement is enabled, by consideration of priority and occurrence (but without active/passive status).	
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemEventMemoryEntryStorageTrigger [ECUC_Dem_00797]				
Parent Container	DemPrimaryMemory				
Description	Configures the primary trigger to allocate an event memory entry.				
Multiplicity	1				
Type	EcucEnumerationParamDef				
Range	DEM_TRIGGER_ON_CONFIRMED	Event Memory entries are triggered if the UDS status bit 3 (confirmedDTC) changes from 0 to 1.			
	DEM_TRIGGER_ON_FD_C_THRESHOLD	Event Memory entries are triggered when the FDC threshold is reached.			
	DEM_TRIGGER_ON_TEST_FAILED	Event Memory entries are triggered if the UDS status bit 0 (testFailed) changes from 0 to 1.			
Default Value	DEM_TRIGGER_ON_TEST_FAILED				
Post-Build Variant Value	false				
Value Configuration Class	Pre-compile time	X	All Variants		
	Link time	—			
	Post-build time	—			
Scope / Dependency	scope: local				

Name	DemMaxNumberEventEntryPrimary [ECUC_Dem_00690]		
Parent Container	DemPrimaryMemory		
Description	Maximum number of events which can be stored in the primary memory		
Multiplicity	1		
Type	EcucIntegerParamDef		
Range	1 .. 255		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: ECU		

Name	DemOccurrenceCounterProcessing [ECUC_Dem_00767]		
Parent Container	DemPrimaryMemory		
Description	This configuration switch defines the consideration of the fault confirmation process for the occurrence counter. For OBD and mixed systems (OBD/non OBD, refer to DemOBDSupport) configuration switch shall always set to DEM_PROCESS_OCCCTR_TF.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_PROCESS_OCCCTR_CDTC	the occurrence counter is triggered by the TestFailed bit if the fault confirmation was successful (ConfirmedDTC bit is set)	
	DEM_PROCESS_OCCCTR_TF	the occurrence counter is only triggered by the TestFailed bit (and the fault confirmation is not considered) This parameter is mandatory in case of J1939.	
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	-	
	Post-build time	-	
Scope / Dependency	scope: ECU		

Name	DemTypeOfFreezeFrameRecordNumeration [ECUC_Dem_00778]		
Parent Container	DemPrimaryMemory		
Description	This parameter defines the type of assigning freeze frame record numbers for event-specific freeze frame records.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_FF_RECNUM_CALCULATED	freeze frame records will be numbered consecutive starting by 1 in their chronological order	

Post-Build Variant Value	DEM_FF_RECNUM_CON FIGURED false	freeze frame records will be numbered based on the given configuration in their chronological order	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Included Containers		
Container Name	Multiplicity	Scope / Dependency
DemGroupOfDTC	0..65535	This container contains the configuration (parameters) for DTC groups.

	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

Name	DemDebounceBehavior [ECUC_Dem_00786]		
Parent Container	DemDebounceCounterBasedClass		
Description	This parameter defines how the event debounce algorithm will behave, if a related enable condition is not fulfilled or ControlDTCSetting of the related event is disabled.		
Multiplicity	1		
Type	EcucEnumerationParamDef		
Range	DEM_DEBOUNCE_FREEZE	The event debounce counter will be frozen with the current value and will not change while a related enable condition is not fulfilled or ControlDTCSetting of the related event is disabled. After all related enable conditions are fulfilled and ControlDTCSetting of the related event is enabled again, the event qualification will continue with the next report of the event (i.e. SetEventStatus).	
	DEM_DEBOUNCE_RESET	The event debounce counter will be reset to initial value if a related enable condition is not fulfilled or ControlDTCSetting of the related event is disabled. The qualification of the event will be restarted with the next valid event report.	
Post-Build Variant Value	false

10.2.9.3 DemFreezeFrameRecNumClass

SWS Item	[ECUC_Dem_00775]
Container Name	DemFreezeFrameRecNumClass
Parent Container	DemGeneral
Description	This container contains a list of dedicated, different freeze frame record numbers assigned to an event. The order of record numbers in this list is assigned to the chronological order of the according freeze frame records.
Configuration Parameters	

Name	DemFreezeFrameRecordClassRef [ECUC_Dem_00800]
Parent Container	DemFreezeFrameRecNumClass
Description	This parameter references record number(s) for a freeze frame record.
Attributes:	requiresIndex=true
Multiplicity	1..254
Type	Reference to DemFreezeFrameRecordClass
Post-Build Variant Multiplicity	false

10.2.10.2 DemDataElementInstance

SWS Item	[ECUC_Dem_00875]
Container Name	DemDataElementInstance
Parent Container	DemSRDataElementClass
Description	Instance Reference to the primitive data in a port where the data element is typed with an ApplicationPrimitiveDataType or an ImplementationDataType.
Configuration Parameters	

Name	DemDataElementInstanceRef [ECUC_Dem_00861]		
Parent Container	DemDataElementInstance		
Description	Instance Reference to the primitive data which shall be read or written. Supported are VariableDataPrototypes in SenderReceiverInterfaces and NvDataInterfaces and ParameterDataPrototypes in ParameterInterfaces (read only). This reference is applicable if the AutosarDataPrototype is typed with a ApplicationPrimitiveDataType of category VALUE or BOOLEAN or if the AutosarDataPrototype is typed with a ImplementationDataType of category VALUE or TYPE_REFERENCE that in turn boils down to VALUE		
Multiplicity	1

10.2.10.4 DemInternalDataElementClass

SWS Item	[ECUC_Dem_00684]		
Container Name	DemInternalDataElementClass		
Parent Container	DemDataElementClass		
Description	This container contains the configuration (parameters) for an internal data element class.		
Configuration Parameters			

Name	DemDataElementContentSize [ECUC_Dem_00614]		
Parent Container	DemInternalDataElementClass		
Description	Defines the size of the data element in bytes.		
Multiplicity	0..1		
Type	EcclIntegerParamDef		
Range Default Value	1 .. 255		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemInternalDataElement [ECUC_Dem_00616]	
Parent Container	DemInternalDataElementClass	
Description	This parameter defines the Dem-internal data value, which is mapped to the data element.	
Multiplicity	1	
Type	EcucEnumerationParamDef	
Range	DEM_AGINGCTR_DOWN_CNT	map down-counting Dem-internal aging counter, max. range: 1 byte
	DEM_AGINGCTR_UPCNT	map up-counting Dem-internal aging counter, max. range: 1 byte
	DEM_AGINGCTR_UPCNT_FIRST_ACTIVE	Map up-counting Dem-internal aging counter, max. range: 1 byte, starting at 1 when aging starts.
	DEM_CLR_DIST	Distance since diagnostic trouble codes cleared (PID31)
	DEM_CLR_TIME	Time since diagnostic trouble codes cleared (PID4E)
	DEM_CURRENT_FDC	map Dem-internal fault detection counter, max. range: 1 byte
	DEM_CYCLES_SINCE_RST_FAILED	map Dem-internal Operation Cycle Counter - Cycles since first failed, max. range: 1 byte
	DEM_CYCLES_SINCE_LAST_FAILED	map Dem-internal Operation Cycle Counter - Cycles since last failed, max. range: 1 byte
	DEM_DTC_PRIORITY	DTC priority statically assigned to this DTC via DemDTCPriority. The length is one byte.
	DEM_EVENT_ASSOCIATED_IDENTIFICATION	Represents the static value associated to an event by DemEventAssociatedIdentification.
	DEM_FAILED_CYCLES	map Dem-internal Operation Cycle Counter - Failed cycles, max. range: 1 byte
	DEM_J1939LAMP_STATUS	Current state of applicable lamp(s) for this DTC in SAE J1939 DM31 format.
	DEM_MAX_FDC_DURING_CURRENT_CYCLE	map Dem-internal DTC Fault Detection Counter maximum value during current operation cycle, max. range: 1 byte
	DEM_MAX_FDC_SINCE_LAST_CLEAR	map Dem-internal DTC Fault Detection Counter maximum value since last clear, max. range: 1 byte
	DEM_MIL_DIST	Distance Travelled While MIL is Activated (PID21)
	DEM_MIL_TIME	Time run by the engine while MIL is activated (PID4D)
	DEM_MONITOR_DATA_0	The monitorData0 value provided along with Dem_SetEventStatusWithMonitorData.
	DEM_MONITOR_DATA_1	The monitorData1 value provided along with Dem_SetEventStatusWithMonitorData.

Post-Build Variant Value	DEM_OCCCTR	map Dem-internal occurrence counter, max. range: 1 byte	
	DEM_OVFLIND	map Dem-internal overflow indication, max. range: 1 byte (0 = False, 1 = True)	
	DEM_SIGNIFICANCE	map (static) Dem-internal event significance (refer to DemDTCSignificance), max. range: 1 byte (0 = OCCURRENCE, 1 = FAULT)	
	DEM_WARM_UPS	Number of warm-ups since diagnostic trouble codes cleared (PID30)	
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU

SWS Item	[ECUC_Dem_00842]
----------	------------------

Container Name	DemSRDataElementClass
Parent Container	DemExternalSRDataElementClass
Description	<p>This container defines the source of data in a provided port which shall be read for a external data element</p> <p>This container shall contain either one DemSubElementInDataElementInstance OR DemDataElementInstance OR DemSubElementInImplDataElementInstance reference.</p>
Configuration Parameters	

Container Choices		
Container Name	Multiplicity	Scope / Dependency
DemDataElementInstance	0..1	Instance Reference to the primitive data in a port where the data element is typed with an ApplicationPrimitiveDataType or an ImplementationDataType.
DemSubElementInDataElementInstance	0..1	Instance Reference to the primitive sub-element (at any level) of composite data in a port where the data element is typed with an ApplicationCompositeDataType.
DemSubElementInImplDataElementInstance	0..1	Instance Reference to the primitive sub-element (at any level) of composite data in a port where the data element is typed with an ImplementationDataType of category STRUCTURE or ARRAY.

10.2.10.8 DemSubElementInDataElementInstance

SWS Item	[ECUC_Dem_00874]
Container Name	DemSubElementInDataElementInstance
Parent Container	DemSRDataElementClass
Description	Instance Reference to the primitive sub-element (at any level) of composite data in a port where the data element is typed with an ApplicationCompositeDataType.
Configuration Parameters	

Name	DemSubElementInDataElementInstanceRef [ECUC_Dem_00860]		
Parent Container	DemSubElementInDataElementInstance		
Description	Instance Reference to the primitive sub-element (at any level) of composite data in a port which shall be read or written. Supported are VariableDataPrototypes in SenderReceiverInterfaces and NvDataInterfaces and ParameterDataPrototypes in ParameterInterfaces (read only). This reference is applicable if the AutosarDataPrototype is typed with a ApplicationCompositeDataType.		
Multiplicity	1		
Type	Instance reference to APPLICATION-COMPOSITE-ELEMENT-DATA-PROTOTYPE context: ROOT-SW-COMPOSITION-PROTOTYPE SW-COMPONENT-PROTOTYPE PORT-PROTOTYPE AUTOSAR-DATA-PROTOTYPE APPLICATION-COMPOSITE-ELEMENT-DATA-PROTOTYPE*

Name	DemPortInterfaceMapping [ECUC_Dem_00846]		
Parent Container	DemAlternativeDataInterface		
Description	<p>Optional reference to PortInterfaceMapping which defines the mapping rules.</p> <p>The PortInterfaceMapping is used to get the DataPrototypeMapping that describes a conversion between the data prototype referenced by DemDataElement and the data prototype referenced from DcmDspExternalSRDataElementClass.</p>		
Multiplicity	0..1		
Type	Foreign reference to PORT-INTERFACE-MAPPING		
Post-Build Variant Multiplicity	false		
Post-Build Variant Value	false		
Multiplicity Configuration Class	Pre-compile time Link time Post-build time	X	All Variants
Value Configuration Class	Pre-compile time Link time Post-build time	—	—
Scope / Dependency			

No Included Containers

10.2.10.12 DemAlternativeDiagnosticDataElement

SWS Item	[ECUC_Dem_00934]
Container Name	DemAlternativeDiagnosticDataElement
Parent Container	DemDiagnosisScaling
Description	This container contains the configuration (parameters) of an alternative Diagnosis Representation by the means of Diagnostic Extract.
Configuration Parameters	

Name	DemDiagnosticDataElementRef [ECUC_Dem_00935]		
Parent Container	DemAlternativeDiagnosticDataElement		
Description	<p>Alternative Diagnosis Representation for the data defined by the means of a DiagnosticDataElement in the Diagnostic Extract.</p> <p>This EcucForeignReference enables the access to all SwDataDefProps, in particular BaseType, CompuMethod and DataConstr</p> <p>The CompuMethod and DataConstr that applies to the referenced DiagnosticDataElement will be applied to the data type of the VariableDataPrototype in the interface used by the Dem. The mapped ImplementationDataType needs to match the given BaseType.</p>		
Multiplicity	1		
Type	Foreign reference to DIAGNOSTIC-DATA-ELEMENT		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: local		

No Included Containers

10.2.10.13 DemAlternativeDataType

SWS Item	[ECUC_Dem_00847]
Container Name	DemAlternativeDataType
Parent Container	DemDiagnosisScaling
Description	<p>This container contains the configuration (parameters) of an alternative Diagnosis Representation by the means of an ApplicationDataType.</p> <p>Additionally the definition of a text table mapping can be a defined for ApplicationDataTypes that refers to a CompuMethod of category TEXTTABLE and SCALE_LINEAR_AND_TEXTTABLE.</p>
Configuration Parameters	

Name	DemApplicationDataType [ECUC_Dem_00848]		
Parent Container	DemAlternativeDataType		
Description	<p>Alternative Diagnosis Representation for the data defined by the means of a ApplicationDataType of category VALUE, BOOLEAN or ARRAY.</p> <p>The CompuMethod that applies to the referenced ApplicationDataType in case of category VALUE or BOOLEAN will be applied to the data type of the VariableDataPrototype in the interface used by the Dem.</p>		
Multiplicity	1		
Type	Foreign reference to APPLICATION-DATA-TYPE		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency			

Included Containers		
Container Name	Multiplicity	Scope / Dependency
DemTextTableMapping	0..*	<p>The purpose of the DemDspTextTableMapping is to associate a texttable value defined in the context of the Dem to a texttable value defined in the context of a CompuMethod referenced by a DataType that shall be taken to create a dataElement in a SenderReceiverInterface. By this means it is possible to create a primitive version of a TexttableMapping (which can only be applied if a dataElement already exists).</p> <p>In other words, the DemDspTextTableMapping provides a similar mechanism to the TexttableMapping in a situation where the TexttableMapping cannot be applied since the SenderReceiverInterface for the PortPrototype on the Dem ServiceComponent does not yet exist.</p>

10.2.10.14 DemTextTableMapping

SWS Item	[ECUC_Dem_00849]
Container Name	DemTextTableMapping
Parent Container	DemAlternativeDataType

Description	<p>The purpose of the DemDspTextTableMapping is to associate a texttable value defined in the context of the Dem to a texttable value defined in the context of a CompuMethod referenced by a DataType that shall be taken to create a dataElement in a SenderReceiverInterface. By this means it is possible to create a primitive version of a TexttableMapping (which can only be applied if a dataElement already exists).</p> <p>In other words, the DemDspTextTableMapping provides a similar mechanism to the TexttableMapping in a situation where the TexttableMapping cannot be applied since the SenderReceiverInterface for the PortPrototype on the Dem ServiceComponent does not yet exist.</p>
--------------------	---

Configuration Parameters

Name	DemDiagnosisRepresentationDataValue [ECUC_Dem_00851]		
Parent Container	DemTextTableMapping		
Description	The data value in the diagnosis representation.		
Multiplicity	1		
Type	EcclIntegerParamDef		
Range	0 .. 18446744073709551615		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU		

Name	DemInternalDataValue [ECUC_Dem_00850]		
Parent Container	DemTextTableMapping		
Description	The ECU internal data value.		
Multiplicity	1		
Type	EcclIntegerParamDef		
Range	0 .. 18446744073709551615		
Default Value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	—	
	Post-build time	—	
Scope / Dependency	scope: ECU
